ISSP 2012 – Family and Changing Gender Roles IV
Study Description
ISSP Study Description Form for ISSP 2012
Please use this form for reporting on Module 2006 and later!

Study title: Family and Gender Roles IV

Fieldwork dates: 15-04-2012
25-06-2012

Principal investigators: Mónica Méndez and Natalia García-Pardo, Center of Sociological Research (CIS)

Sample type: Two phased, stratified by clusters. Proportional Random Sampling for the selection of the primary sampling units (census blocks). The last units (individuals) are the product of a systematic sampling from the frame of residents generated by the National Statistics Institute (INE) from the most recent population register (Padrón Continuo, Sept. 2011)

Fieldwork institute: Center of Sociological Research (CIS)

Fieldwork methods: Face to face

N. of respondents: 2.595

Details about issued sample:

Language(s): Spanish
Weight present: yes
Weighting procedure: Weights have been elaborated from the response rates, and have been calculated using two variables: Autonomous Communities, CCAA–\(h\)– (E_REG), and Size of Municipalities –\(k\)– (Tamaño de Habitat) (E_SIZE).

Algorithm:
\[
\hat{P} = \frac{1}{n'} \sum_{h=1}^{H} \sum_{k=1}^{K} \sum_{i=1}^{n'_{h,k}} w_{i,h,k} \cdot y_{i,h,k}
\]

where,
\[
n', \text{ is the size of the sample collected}
\]
\[
n'_{h,k}, \text{ is the size of the sample collected in strata } h,k
\]
\[
w_{i,h,k} : \text{final weight, defined as}
\]
\[
w_{i,h,k} = \frac{1}{N} \cdot \frac{1}{\pi_{i,h,k}} \cdot n' = \frac{1}{N} \cdot \frac{1}{\pi_{i,h,k} \cdot r_{h,k}} \cdot n' = \frac{n'}{N} \cdot \frac{N_{h,k}}{n'_{h,k}}
\]

where,
\[
\pi_{i}, \text{ is the inclusion probability for } i \text{ element}
\]
\[
r_{h,k}, \text{ is the response rate in the strata } h,k
\]
\[
N_{h,k}, \text{ is the population size in the strata } h,k; \text{ and,}
\]
\[
N, \text{ is the population size.}
\]

Known systematic properties of sample: 11.7% of the original sample are foreigners living in Spain, but only xx,x% are part of the real sample, due to the inherent difficulties to locate certain groups of foreigners (xx,x% of the people in the sample who were “not found” were foreigners).

Deviations from ISSP questionnaire: The Spanish Template shows every deviation from ISSP BV in the Spanish questionnaire and describes the recoding used to match the ISSP BV (socio-demographics). In the ANEX to the Template, there is also a description of some deviations and recodings in the opinion variables.

E_SIZE is constructed by a 7 category variable based on size of municipalities (from Less than 2,000 inhabitants to More than 1 million)
