# 1. Introduction

This report accompanies the TV Debates Panel Study 2013 (ZA5858) conducted by the Austrian National Election Study (AUTNES) and provides a detailed documentation of the data collection.

The four wave panel focuses on the Austrian National Parliamentary Election held on 29 September 2013.

The Documentation Report is structured in nine logical chapters including this introduction (Chapter 1). Chapter 2 contains information about the conditions of use. Chapter 3 provides the study description and Chapter 4 information on the data cleaning procedures. Chapter 5 gives an overview of the study design (e.g. fieldwork, sampling procedure, and quality control). The methodological approaches to measuring implicit attitudes towards Muslims (Wave 2) and the Freedom Party of Austria (FPÖ) (Wave 3) are described in Chapters 6 and 7, respectively. The coding of the open-ended questions in the survey is provided in Chapter 8. A complete codebook is provided in Chapter 9.

## 1.1 How to cite these data

Data users are kindly asked to acknowledge the data *and* the accompanying release document. Please refer to the GESIS data catalogue ([www.gesis.org](http://www.gesis.org)) for a recommendation on how to cite these data and the documentation.

## 1.2 Changes in Edition 2.0.1

For an overview of changes between earlier editions of the data (Edition 1.0.0., 2014; Edition 2.0.0, 2016) and this edition, please look at the document “ZA5858\_changes\_in\_v2-0-1.pdf” available on the GESIS website.

## **2. Conditions of Use**

### **2.1 Restrictions**

The data are available for non-profit use without restrictions.

### **2.2 Confidentiality**

The AUTNES, its Principal Investigators, and the funding institutions neither take responsibility for the use of the data or interpretations and inferences based on their use, nor do they accept liability for indirect, consequential, or incidental damages or losses arising from use of the data.

### **2.3 Deposit Requirement**

In order to facilitate exchange within the scientific community and to provide the funding agencies with essential information about the use of archival resources, users of the AUTNES data are asked to notify the AUTNES team of publications based on its data.

## 3. Study Description

### 3.1 Title and Edition

AUTNES TV Debates Panel Study 2013  
(Edition 2.0.1)

### 3.2 Principal Investigators

Wolfgang C. Müller, University of Vienna (Supply Side)  
Sylvia Kritzinger, University of Vienna (Demand Side)  
Hajo Boomgarden, University of Vienna and Klaus Schönbach, Northwestern  
University (Media Side)

### 3.3 Funding / Acknowledgments

The survey carried out by the Austrian National Election Study (AUTNES), a National Research Network (NFN) funded by the Austrian Research Fund (FWF) (S10902-G11).

### 3.4 Fieldwork completed by

TNS Opinion  
Rue Jules Cockx 8-10  
1160 Brussels  
Belgium  
<http://www.tns-opinion.com>

### **3.5 File Names**

“ZA5858\_de\_v2-O-1”

“ZA5858\_en\_v2-O-1”

### **3.6 Topics / Keywords**

Televised debates, candidate characteristics, media consumption, use of social networks, coalition preferences/likelihood, issue salience, economic situation, attitudes towards immigrants, Item Count Technique (ICT), Crosswise Model (CM), Single Category Implicit Association test (SC-IAT), Affect Misattribution Procedure (AMP)

## 4. Data Cleaning

### 4.1 Data Protection

Postal codes were validated and corrected for incorrect entries. However, all information on postal codes had to be removed for reasons of data protection.

### 4.2 Missing Values

If applicable, missing values are coded as follows:

88 = don't know

99 = refused

## 5. Study Design

### 5.1 Field Work

TNS Opinion carried out the “Campaign and Media Effects” panel study between 16 August and 7 October 2013 conducted as a four wave panel.

### 5.2 Sampling

The TV Debates Panel Study surveyed respondents with access to the internet. Respondents were sampled from a pre-existing online access panel provided by TNS Opinion, Brussels. In order to participate in the study respondents had to be at least 16 years old and eligible to vote on Election Day 2013. They were randomly selected based on the key demographics (age, gender, region, and household size). The quota sample was structured to closely represent the Austrian population.

Once these demographic criteria were defined, TNS/Lightspeed selected the panellists based on their stored information. This information was collected by TNS/Lightspeed during the registration process. It has been constantly updated during the regular profiling and screening process.

The population’s characteristics were derived from Statistik Austria in 2012. We present a comparison of the target population, the TNS/Lightspeed panel, and our initial W1 sample split according to the four core demographic characteristics (age, gender, region, and household size) in Table 1 below.

**Table 1. Comparison of the key characteristic in the sample, panel, and population**

	AUTNES Sample	TNS Panellists	Population
<b>GENDER</b>			
Male	47.6%	46.9%	48.8%
Female	52.4%	53.1%	51.2%
<b>AGE</b>			
14-19 years	5.4%	3.2%	7.8%
20-29 years	20.3%	29.8%	14.9%
30-39 years	18.4%	26.6%	15.1%
40-49 years	19.8%	20.2%	18.7%
50-59 years	18.5%	12.2%	16.2%
60-69 years	14.4%	6.8%	12.1%
70+ years	3.3%	1.2%	15.2%
<b>REGION</b>			
Burgenland	4.5%	3.1%	3.4%
Carinthia	6.5%	6.5%	6.6%
Lower Austria	21.8%	16.6%	19.2%
Upper Austria	16.2%	13.4%	16.8%
Salzburg	5.6%	5.2%	6.3%
Styria	14.4%	14.4%	14.3%
Tyrol	5.5%	5.6%	8.5%
Vorarlberg	2.5%	5.2%	4.4%
Vienna	23.2%	30.0%	20.6%
<b>HOUSEHOLD SIZE</b>			
1 person	18.8%	17.7%	36.5%
2 persons	39.1%	34.1%	28.8%
3 persons	18.9%	21.6%	15.5%
4 persons	15.9%	17.5%	12.8%
5 persons	5.4%	6.4%	4.6%
6 or more persons	1.9%	2.7%	1.9%

Table 1 indicates that the profile of the panel was largely in line with the overall population. Only minor discrepancies could be identified: Younger respondents (i.e. 20-39 years), females, larger households, and the Bundesländer Vienna, Vorarlberg, and Styria were slightly overrepresented, while the oldest age group (70+ years), males, the other regions, and single households were underrepresented in the panel. Especially with regard to age, this is the usual pattern of any online survey. The sample structure follows similar patterns, but not identical patterns: Younger respondents, females, Vienna, Lower Austria, and Styria as well as larger households were overrepresented by the sample in comparison to the general population.

Table 2 provides an overview of the technical specifications and details for each wave. All interviews were implemented as Computer Assisted Web Interviews (CAWI) based on the sample design above (5.2). Only respondents who completed Wave 1 were entitled to take part in the following waves. Respondents who took part in Wave 2a were not invited to participate in Wave 2b. In total, 3,084 respondents participated in Wave 1. 1,039 were achieved in Wave 2a and 1,004 in Wave 2b. 1,421 respondents participated in Wave 3 and 2,456 respondents also completed Wave 4.

The average interview length in Wave 1 was 17 minutes. Both splits in Wave 2 were a little bit shorter with 12 minutes on average. The average interview length of Wave 3 was 4 minutes and Wave 4 about 5 minutes. The questionnaires of both waves were much shorter than the previous ones.

**Table 2. Technical Details**

Wave	Field Period	Sample Design	Sample Size	Average Interview Length	Number of Invitations	Dropout Rate
1	16 to 28 August 2013	Quota Sample: gender, age, region, household size	3,084	17 mins.	20,859	4.3%
2a	9 to 12 September 2013	Re-invites to W1 panellists; not W2b	1,039	12 mins.	1,619	11.2%
2b	17 to 19 September 2013	Re-invites to W1 panellists; not W2a	1,004	12 mins.	1,612	9.6%
3	26 to 29 September 2013	Re-invites to W1 panellists	1,421	4 mins.	2,043	11.3%
4	30 September 2013 to 7 October 2013	Re-invites to W1 panellists	2,456	5 mins.	3,048	0.9%

The dropout rate in Wave 1 was 4.28% - as the quotas for age and region were fully achieved. In Waves 2a (11.19%), 2b (9.62%), and 3 (11.31%), the dropout rates were a little higher. One reason for this might be that the questionnaires were quite extensive and additional psychological assessments (AMP in Wave and SC-IAT in Wave 3, see also Chapters 6 and 7). Both tests required the redirection of respondents to a separate online module as well as switching from the mouse to the keyboard, which may have increased the dropout rate. The dropout rate decreased to 0.85% in wave 4.

## 6. Affect Misattribution Procedure (AMP)

The Affect Misattribution Procedure (AMP) was originally developed by Payne et al. (2005)<sup>1</sup>. The AUTNES relied on an Affect Misattribution Procedure (AMP) to measure respondents' implicit attitudes towards Muslims (Wave 2). Detailed documentation of the primes can be found in the corresponding questionnaires. The AMP was technically implemented and programmed by TNS Opinion.

We thank Keith Payne (Department of Psychology, University of North Carolina), Isabell Hühnel (Department of Psychology, Humboldt-University Berlin), and Christof Lammer (Department of Methods in the Social Sciences, University of Vienna) for their advice and support with the preparation of the AMPs.

Smith, N. Sriram, Yoav Bar-Anan, and Brian A. Nosek (2009) Implicit Race Attitudes Predicted Vote in the 2008 U.S. Presidential Election, in: *Analysis of Social Issues and Public Policy* 9(1): 241-253 and Maier, Michaela, Jürgen Maier, Anna Baumert, Nico Jahn, Stefan Krause, and Silke Adam (2015) Measuring Citizens' Implicit and Explicit Attitudes towards the European Union, in: *European Union Politics* 16(3): 369-385.

## 7. Single Category Implicit Association Test (SC-IAT)

The Single Category Implicit Association Test (SC-IAT) follows the same procedure as the original Implicit Association Test (IAT) developed by Greenwald, McGhee, and Schwartz (1998)<sup>2</sup>. The core difference is that only one target and two attribute categories are required instead of two contrasting target categories and two attribute categories in the traditional IAT design (Friese et al. 2007; Houben et al. 2006)<sup>3</sup>. The AUTNES implemented a SC-IAT in order to measure implicit attitudes towards the Freedom Party of Austria (FPÖ) (Wave 3).

The SC-IAT was set up in three modules. The first one served as training with a total of 20 trials. The two crucial modules relied on 48 trials.

We thank Colin Tucker Smith (Department of Psychology, University of Florida/Project Implicit) for programming and implementing the SC-IAT on Project Implicit's webpage ([www.projectimplicit.com](http://www.projectimplicit.com)).

## 8. Open-Ended Questions

### 8.1 Open-Ended Questions

Several open-ended questions were implemented in the questionnaires. The original answers are provided as string variables in the data set accompanied by re-coded numerical codes.

### 8.2 Different Levels of Coding

All questions on issues (e.g., most important problem, second most important problem etc.) used a coding scheme that was specifically developed by the AUTNES. The same scheme was also applied by the Supply Side and the Media Side to achieve consistent issue codes. The coding scheme relies on three hierarchical levels (Level 1: 16 categories, Level 2: 91 categories, Level 3: 730 categories). Pre-tests were run on 300 randomly selected issues from the AUTNES Pre- and Post-Panel Study 2013<sup>4</sup>. These were coded by two human coders. The results revealed that the Level-3-codes were too fine-grained for our surveys (see Table 4). Consequently, all issues were coded on the basis of the Level-2-codes.

The coding was carried out by two human coders who were provided with a codebook introducing the coding rules in detail. Coders were asked to match the responses with one of the listed categories. Three additional categories were added: (1) Answers that lacked sufficient information were coded as 99999 (= not classifiable); (2) respondents mentioning that no problems prevailed in Austria were coded as 88888

<sup>4</sup> Kritzinger, Sylvia, Eva Zeglovits, Julian Aichholzer, Christian Glantschnigg, Konstantin Glinitzer, David Johann, Kathrin Thomas, and Markus Wagner (2014) AUTNES Pre- and Post-Panel Study 2013. GESIS Data Archive, Cologne. ZA5859 Data file Version 2.0.0, [doi:10.4232/1.11959](https://doi.org/10.4232/1.11959);

Kritzinger, Sylvia, Eva Zeglovits, Julian Aichholzer, Christian Glantschnigg, Konstantin Glinitzer, David Johann, Kathrin Thomas, and Markus Wagner (2014) AUTNES Pre- and Post-Panel Study 2013. Documentation. Vienna: University of Vienna.

(= no problem in Austria); (3) few respondents gave more than one answer (= multiple answers). If all given answers matched two categories on Level 2, coders used the 77777 code indicating that multiple answers were given and coded the answers in additional variables (w1\_q5mx1, w1\_q5mx2, w1\_q5mx3, w1\_q7mx1, w1\_q7mx2, w1\_q7mx3, and w2\_q2mx1, w2\_q2mx2, w2\_q2mx3, w2\_q2mx1). If all given answers fell into the same level 2 category, only one code was assigned.

**Table 5. Inter-Coder Reliability - Pre-Test**

	Same number of codes:	Same code:
<b>Level 2:</b>	%-Coincidence = 0.950	Krippendorfs Alpha = 0.752 %- Coincidence = 0.760
<b>Level 3:</b>	%- Coincidence = 0.897	Krippendorfs Alpha = 0.642 %- Coincidence = 0.647
N=300 (AUTNES PRE- and POST Panel Study 2013), two human coders.		

### 8.3 Inter-Coder Reliability

Inter-coder reliability was repeatedly measured during the coding process as well as by the end of the coding process. It yielded a high level of coincidence (Same number of codes: %-Coincidence = 95.8%; same code: %-Coincidence = 88.0%; Krippendorf's Alpha = 0.879). Codes that did not match were reviewed and finally matched by a third coder. As the coding scheme is hierarchical, two variables are provided in the data set: issues on Level 1 and Level 2.
