

AUTNES Pre- and Post-Panel Study (ZA5859) Errata Version 2.0.1

From version 2.0.0 to version 2.0.1 a few changes were made.

One major change concerned the value labels of w2_q34x* and w2_q37x* in the German data set. The labels for the values 8 (= “nie”) and 9 (= “seltener”) were not assigned correctly in earlier versions. They have been swapped for version 2.0.1 and now correctly reflect the intended meaning as documented in the questionnaire and the codebook.

The English data sets were not concerned by this error.

Furthermore, minor changes were made regarding the omission of umlauts and the replacement of other non-ASCII characters in various variables.
