Demographic Variables in ALLBUS/GGSScompact 2016
About this Supplement to ALLBUS/GGSScompact 2016

This document contains frequency tables by sex of respondent for the data of ALLBUS/GGSScompact 2016. The data in these tables is weighted by wghtpew (person-related East-West weight). This weight adjusts for the oversample of respondents in the new federal states. Therefore, the numbers in the tables are directly interpretable for Germany as a whole.

For more information on weighting ALLBUS/GGSS data, please refer to:

Notes on ALLBUS/GGSScompact 2016 (Study No. 5253)

As an alternative to ALLBUS/GGSS 2016 with its relatively complex demography module, GESIS also offers this additional compact version with a reduced number of demographic variables. Providing an easily manageable selection of basic demographic descriptors, ALLBUS/GGSScompact addresses, amongst others, the needs of newcomers to data analysis. Moreover, access conditions for ALLBUS/GGSScompact are less strict than for the more extensive ALLBUS/GGSS data, because data protection issues are less salient.

However, for reasons of data protection some of the remaining demographic data still had to be simplified. A comprehensive account of recodes can be found in the next section of this document.

Apart from demography, all other questions have been retained in full in the compact version. Moreover, variable labels and variable numbers in ALLBUS/GGSScompact are the same as in the unabridged ALLBUS/GGSS data set. In this way, users may easily move between both versions of the ALLBUS/GGSS data if necessary.

Note for Publications Using ALLBUS/GGSS Data

Usage and analysis of research data as well as any publication of research results based on such data should be connected with information on the data generator, the data source and an identification of the dataset. GESIS Data Archive for the Social Sciences therefore suggests the following minimum standard for the scientific citation of its data sets. Example for release 1.0.0:
