About ALLBUS/GGSScompact 1980-2016 (Study No. 4589)

As an alternative to ALLBUS/GGSS 1980-2016 with its relatively complex demography module, GESIS also offers an additional compact version with a reduced number of demographic variables. Providing an easily manageable selection of basic demographic descriptors, this ALLBUS/GGSScompact addresses, amongst others, the needs of newcomers to data analysis. Moreover, access conditions for ALLBUS/GGSScompact are less strict than for the more extensive ALLBUS/GGSS data, because data protection issues are less salient.

Apart from demography, all questions have been retained in full in the compact version. Moreover, variable labels and variable names in ALLBUS/GGSScompact are the same as in the unabridged ALLBUS/GGSS data set. In this way, users may easily move between both versions of the ALLBUS/GGSS data if necessary.

However, for reasons of data protection some of the remaining demographic data still had to be simplified. When part of the ALLBUS/GGSS survey in question, detailed data concerning the respondents' citizenship has been dichotomized ("German citizenship" vs. "No German citizenship"), information on the federal state where the respondent lived in his youth has been recoded to four values (old federal states, new federal states, former Eastern German territories, other country). Finally, the two largest categories of the variable 'Political Size of Municipality' have been combined.

Overview of Recoded Variables in ALLBUS/GGSScompact 1980-2016

german German citizenship?

1. Yes, I have German citizenship
(Codes 1 and 2 in the unabridged version of ALLBUS/GGSS 1980-2016)
2. No, I don't have German citizenship
(Code 3 in the unabridged version of ALLBUS/GGSS 1980-2016)

scdn01 Citizenship of spouse

1. Yes, German citizenship
(Code 1 in the unabridged version of ALLBUS/GGSS 1980-2016)
2. No, other citizenship
(Codes 2-24 in the unabridged version of ALLBUS/GGSS 1980-2016)

pdn01 Citizenship of partner

1. Yes, German citizenship
(Code 1 in the unabridged version of ALLBUS/GGSS 1980-2016)
2. No, other citizenship
(Codes 2-24 in the unabridged version of ALLBUS/GGSS 1980-2016)

dg10 Federal state respondent lived in when young

- 01. Old federal states
(Codes 1 to 11 in the unabridged version of ALLBUS/GGSS 1980-2016)
- 02. New federal states
(Codes 12 to 17 in the unabridged version of ALLBUS/GGSS 1980-2016)
- 18. Former German Eastern territories
- 95. Other country

gkpol Political size of municipality

- 01. Up to 1,999 residents
- 02. 2,000 – 4,999 residents
- 03. 5,000 – 19,999 residents
- 04. 10,000 – 49,999 residents
- 05. 50,000 – 99,999 residents
- 06. 100,000 residents and more
(Codes 6 and 7 in the unabridged version of ALLBUS/GGSS 1980-2016)

Data Citation

Usage and analysis of research data as well as any publication of research results based on such data should be connected with information on the data generator, the data source and an identification of the dataset. GESIS Data Archive for the Social Sciences therefore suggests the following minimum standard for the scientific citation of its data sets. Example for release 1.0.0:

ALLBUS/GGSScompact:

GESIS – Leibniz Institute for the Social Sciences (2019): German General Social Survey (ALLBUScompact) – Cumulation 1980-2016. GESIS Data Archive, Cologne. ZA4588 Data file Version 1.0.0, doi: 10.4232/1.13335

GESIS-library catalogue and ALLBUS Bibliography:

To gain more insight into the use of ALLBUS/GGSS data and to facilitate the exchange of information within the scientific community, authors using ALLBUS/GGSS are requested to send in bibliographic citations and, if possible, two sample copies of completed texts. The information you provide will be made available in the **GESIS-library catalogue**, which is also searchable online as part of the GESIS web presence (please direct any questions concerning the GESIS-library holdings and catalogues to Rielies Neitzke (tel.: 0221/47694-131; e-mail: rielies.neitzke@gesis.org)). Your publication will also be included in the ALLBUS bibliography, a comprehensive documentation of scientific works, including short abstracts, in which ALLBUS/GGSS data were used. This collection of bibliographic data can be searched online at the ALLBUS website. It can also be downloaded in various formats for off-line reference.

Contact:

For questions or suggestions about design and implementation of ALLBUS/GGS surveys please contact Michael Blohm in Mannheim (tel.: 0621/1246-276, e-mail: michael.blohm@gesis.org).

For questions about the documentation, archiving, time-series production and dissemination of ALLBUS/GGSS data please contact Pascal Siegers in Cologne (tel.: 0221/ 47694-419; e-mail: pascal.siegers@gesis.org)

Survey Description: ALLBUS/GGSS Cumulation 1980-2016 (Study No. 4589)

Data Collection Periods:

1980: January 1980 to February 1980
1982: February 1982 to May 1982
1984: March 1984 to June 1984
1986: March 1986 to May 1986
1988: April 1988 to July 1988
1990: March 1990 to May 1990
1991: May 1991 to July 1991
1992: May 1992 to June 1992
1994: February 1994 to May 1994
1996: March 1996 to June 1996
1998: March 1998 to July 1998
2000: January 2000 to July 2000
2002: February 2002 to August 2002
2004: March 2004 to July 2004
2006: March 2006 to August 2006
2008: March 2008 to August 2008
2010: May 2010 to November 2010
2012: April 2012 to September 2012
2014: March 2014 to September 2014
2016: April 2016 to September 2016

Contents:

The original surveys have been designed to monitor trends in attitudes, behavior, and societal change in the Federal Republic of Germany. The main topics of this cumulative study are:

- 1.) Economy
- 2.) Politics
- 3.) Social inequality
- 4.) Ethnocentrism and minorities
- 5.) Family
- 6.) Lifestyle and personality
- 7.) Health
- 8.) Religion and world view
- 9.) Personal and collective values
- 10.) Social capital
- 11.) Deviant behavior and sanctions
- 12.) ALLBUS-Demography
- 13.) Geographic data
- 14.) Added value

Topics:

1.) *Economy*: assessment of the present and future economic situation in Germany and in one's own federal state, assessment of present and future personal economic situation.

2.) *Politics*:

satisfaction with the federal and state government, with German democracy and with the performance of the German political system (political support);

basic political attitudes: self-placement on left-right continuum, political interest, party inclination;

voting intention (Sonntagsfrage), participation in last federal elections, recall of vote in last federal elections, party-sympathy-scales, likelihood of voting for different political parties;

political participation;

political issues: attitudes towards nuclear energy, the death penalty for terrorists, towards the privatization of publicly owned companies; attitudes towards abortion, attitude towards expanding or cutting budgets for social services and defense, perceived position of the federal government in these matters;

democracy scale;

political efficacy: perception of individual influence on politics, gap between politicians and citizens, self-assuredness with regard to political group work, too much complexity in politics, perception of politicians' closeness to constituents, participation in the vote as a civic duty;

perceived strength of conflicts between social groups;

confidence in public institutions and organizations;

Identification with various political entities: identification with own municipality, the federal state, the old Federal Republic or the GDR, unified Germany and the EU;

Attitudes relating to the process of German unification: attitude towards the demand for increased willingness to make sacrifices in the West and more patience in the East, unification is advantageous, for East and West respectively, future of the East depends on the willingness of eastern Germans to make an effort, strangeness of citizens in the other part of Germany, performance pressure in the new states, attitude towards dealing with the Stasi-past of individuals, evaluation of socialism as an idea;

evaluation of administration services and assessment of treatment by the administration;

national pride: pride in German institutions and German achievements, pride in being a German.

3.) *Social Inequality*: fair share in standard of living, self-assessment of social class and classification on a top-bottom-scale, evaluation of personal occupational success, comparison with father's position and personal occupational expectations for the future, attitudes towards the German economic system and evaluation of policies supporting the welfare state, assessment of access to education, perceived prerequisites for success in society, income differences as incentive to achieve, acceptance of social differences, evaluation of personal social security.

4.) *Ethnocentrism and minorities*: attitude towards the influx of eastern European ethnic Germans, asylum seekers, labor from EU or non-EU countries; perceived consequences of presence of foreigners in Germany, treatment of foreigners by the administration, ranking in terms of importance of different citizenship requirements; scale of attitudes towards foreigners and contacts with foreigners (split: guest-workers) within the family, at work, in the neighborhood or among friends; opinion on dual citizenship and on equal rights for foreigners, support for the teaching of Islam in public schools, estimation of proportion of foreigners in East and West Germany and in the neighborhood where respondent lives, living in neighborhoods with high percentage of foreigners, perceived differences in lifestyle, indicators for social distance to ethnic minorities and foreigners, attitudes towards Islam (Islamophobia), items on anti-Semitism, perception and evaluation of discriminatory behavior towards foreigners.

5.) *Family*: attitude towards marriage and having a family, ideal number of children, attitude towards employment of women and mothers, attitude towards the role of men and women in the family, division of labor regarding house and family work, importance of educational goals, most important educational goals in school, classification of the importance of certain educational aspirations for a child, desired characteristics of children.

6.) *Lifestyle and personality*: authoritarianism, importance of life aspects, preferred job characteristics (security, income, responsibility, etc.), free time activities, use of media (frequency of watching television over the week, taste in television programs, frequency of reading a daily newspaper per week, musical preferences).

7.) *Health*: overall health, physical and psychological shape during the last four weeks, health problems' impact on everyday life, chronic illnesses, been sick in the last four weeks, reason for and frequency of seeing a doctor in the last three months, time spent in hospital during the last 12 months, officially recognized disability level, smoking habits, overall life satisfaction, height and weight, consumption of various foodstuffs and beverages, affectedness by unhealthy working conditions and by mobbing, perception of general environmental pollution and personally experienced environmental pollution, questions on AIDS (knowledge of the disease AIDS, attitudes towards AIDS-

infected people, worry about personal AIDS infection, personal protective measures and behavioral changes, AIDS-infected people in one's own circle of friends).

8.) *Religion and world view*: present and former religious affiliation, frequency of church attendance, frequency of attending other place of worship, importance of religion in parental home, frequency of prayer, participation in religious activities, frequency of meditation, interest in Christian programs in the media, self-assessment of religiousness and spirituality, religious cosmology and belief in God, religious beliefs, meaning of life, religious indifference, thinking about metaphysical questions, experience with and attitude towards different forms of belief, parabelief and superstition, religion vs. science, funeral by church, marriage in church, baptism of children, attitude towards person with different faiths marrying into the family.

9.) *Personal and collective values*: materialism/postmaterialism (importance of law and order, fighting rising prices, free expression of opinions and influence on governmental decisions), individual value orientations (Klages), attitudes towards legalizing abortion.

10.) *Social capital*: membership in trade union, membership in political party, interpersonal trust, social pessimism and orientation towards the future (anomia), reciprocity.

11.) *Deviant behavior and sanctions*: fear of crime, personal victimization, opinion on various deviant acts with reference to their reprehensibility and the degree to which they deserve prosecution, self-reported deviant behavior, assessment of probability of being caught committing various crimes, respect of the law, lowering the crime rate through severer punishment.

12.) ALLBUS-Demography:

Details about the respondent: gender, age, citizenship, present and former religious affiliation, school education, vocational training, employment status, secondary job, details about current and former occupation respectively, date of termination of full- or part-time employment, fear of unemployment or loss of business, industrial sector, affiliation to public service, fixed-term or permanent employment contract, length of commute, driver's license, supervisory functions, length of employment, size of workplace, working hours per week (primary and secondary job), length of unemployment, gaps in occupational biography, desire for work, marital status.

Details about personal and household income: respondent's personal income, household income, per capita income, equivalised income (OECD-modified scale).

Details about respondent's current spouse: cohabitation before marriage, age, citizenship, religious affiliation, school education, vocational training, university degree, employment status, details about current and former occupation respectively, affiliation to public service, date of termination of full- or part-time employment, length of unemployment, fear of unemployment or loss of business.

Details about respondent's former spouse: age, religious affiliation, school education, vocational training, details about last occupation.

Details about respondent's steady partner: length of relationship, common household, age, citizenship, school education, vocational training, university degree, employment status, details about current and former occupation respectively, affiliation to public service, fear of unemployment or loss of business, date of termination of full- or part-time employment.

Details about respondent's parents: cohabitation with respondent as adolescent, age of respondent when leaving parental home, religious affiliation, school education, vocational training, university education, details about parents' occupation.

Description of household: size of household, number of persons older than 17 in household (reduced size of household).

Migration, residential biography and living environment: distance to last place of residence, length of residence, self-description of place of residence, type of dwelling, size of dwelling, telephone in household, cat or dog in the household, environmental nuisances in area of residence.

13.) *Geographical data*: region of interview (East / West Germany), size of municipality.

13.) *Added value*: Body-Mass-Index, Inglehart-index, family typology, classification of private households (according to Porst and Funk), occupational prestige (according to Treiman), Standard International Occupational Prestige Scale (SIOPS, according to Ganzeboom), International Socio-economic Index of Occupational Status (ISEI, according to Ganzeboom), magnitude prestige (according to Wegener), International Standard Classification of Education (ISCED) 1997 and 2011, class position (according to Goldthorpe), per capita income, equivalized income (OECD-modified scale), percentage of non-German residents at county level, transformation weight for analyses on household level or on individual level, east-west design weight.

Total Population and Sample:

Universe sampled: Federal Republic of Germany (until 1990: West Germany including West Berlin).

Household samples: From 1980 to 1992 and in 1998, a multi-stage random sample of private households was conducted addressing all persons who were at least 18 years of age (ADM Sample Design).

Person Samples: In 1994, 1996, and from 2000 a two-stage, disproportionate random sample was conducted in West Germany (including West Berlin) and East Germany (including East Berlin), comprising all persons living in private households who were at least 18 years old on 1 January of the year of the survey. In the first sample stage municipalities (Gemeinden) in western Germany and municipalities in eastern Germany were selected with a probability proportional to their number of adult residents; in the second sample stage individual persons were selected at random from the municipal registers of residents.

As of 1991 the ALLBUS sample also includes foreigners living in Germany. Targeted individuals who did not have adequate knowledge of German to conduct the interview were treated as systematic unit non-responses.

Method of Data Collection:

Personal interview with standardized questionnaire (PAPI – Paper and Pencil Interviewing; since 2000: CAPI – Computer Assisted Personal Interviewing), supplementary data from accompanying ISSP surveys (self-completion questionnaires, drop off).

Primary Sampling Units / Sample-Points:

See survey descriptions of individual ALLBUS surveys.

Response Rate:

See survey descriptions of individual ALLBUS surveys.

Data Set:

Number of respondents: 64,684

Number of variables: 1,020

Further Notes:

This cumulative data set of 20 ALLBUS surveys contains all ALLBUS time series (i.e. all questions that have been surveyed at least two times). Notes on the special relation between the CAPI- and PAPI-surveys in 2000 can be found in the respective codebooks and in the methodological reports for ALLBUS 2000.

The original German documentation is available under Study No. 4586 (Kumulierter ALLBUS 1980-2016) and Study No. 4587 (Kumulierter ALLBUScompact 1980-2016).

A Digital Object Identifier (DOI) for use in data citations is supplied as part of the data set.

Additional information on ALLBUS is available at:

<http://www.gesis.org/en/allbus>

<http://www.gesis.org/en/allbus/download/>

How to read the Variable Report

The following two examples are actual variables from ALLBUS/GGSS 1980–2016. They were chosen so as to cover the broadest scope of information possible.

The red numbers in the examples refer to the explanations that follow below, i.e. they are not part of the actual variable documentation in the variable reports.

Example 1: Question surveyed during field-work

1

ms26 WOULD NOT LIKE TO LIVE IN NEIGHBORH. 13

2006, 2016:

(Int.: Folding list still displayed.)

And in which neighbourhoods would you not want to live in at all?

2

2016:

(Int.: Please enter all the numbers of named residential areas.

Multiple responses possible.)

Neighbourhood 13

3

-50 There's no neighbourhood that I would say I wouldn't want to live in at all

-9 No answer

-1 Not available 1980-2004, 2008-2014

0 Not selected

1 Selected

4

Comment:

Neighbourhoods that had been selected in ms01-ms13 were not displayed on screen for this part of the question.

5

Explanation

1

Each question unit is assigned a unique variable name and variable label.

2

For variables based directly on questions surveyed in the field (example 1), the complete history of a question, including interviewer instructions and filtering rules, is documented. The general guideline for this documentation is to be as faithful as possible to the original survey instruments. However, in some cases faithfully recording every single difference in wording and in the technical administration of a question would serve to obscure rather than to clarify survey procedures. This predominantly concerns technically complex item batteries and/or questions with a long history in the program, like, for example, the questions on household composition. Here the guideline is to document those modifications that can be plausibly assumed to influence a respondent's answers and to simplify for clarity where differences are functionally equivalent. For a full documentation of the (technical) administration of such questions over the years, please refer to the original questionnaires and data handbooks or variable reports of the cross-section surveys.

Derived variables (example 2), are documented with explanatory notes under the heading 'Description of variable'.

3

Here, the codes stored in the dataset and the corresponding answer categories are documented. Answer options are literally transcribed from the original questionnaires whenever possible. Sometimes clarifying comments in angle brackets are added to the original texts, for example to indicate the year when categories were added or dropped.

4

Additional information about the data follows below the documentation of answer codes. There are three types of additional information: derivation of data, comments and notes.

Derivation of data documents information on how the data has been prepared for this dataset. This includes, for example, any recodes necessary for the harmonization of data or descriptions of how indexes or other derived data were formed or calculated.

Notes provide general background information on variables, often including information on theoretical backgrounds or further reading.

5

Most variable descriptions contain crosstabulations by year of survey. Missing values are documented in absolute values only. They are also marked *M* in the tables (due to technical limitations the column heading Missing is often cut off). Valid responses are documented with absolute frequencies and column percentages. Per default, the data is weighted to adjust for the oversample of respondents in the new federal states. The displayed results can therefore be regarded as representative of the targeted population in Germany as a whole. Please be advised that the weighting procedure can sometimes lead to minor rounding errors in the row sums. This also applies to the percentages in the tables.

Unweighted cross tabulations that show the actual distributions in the data set are documented in a supplement file. Because of the overrepresentation of East German respondents, the numbers in these tables are calculated by year and region of interview from 1991 onwards.

ep06 RESP.OWN FINANCIAL SITUATION IN ONE YEAR

Until 1990:

What do you think your own financial situation will be in a year from now? Do you expect that your own financial situation will be considerably better, somewhat better, the same, somewhat worse, or considerably worse than today?

From 1991:

(Int.: Card from preceding question still on display.)

And what will your own financial situation be like in one year?

-11 1990: No participation in split 2 (code 1 in spl90)

-9 No answer

-8 Don't know

-1 Not available 1980, 1988

1 Considerably better than today

2 Somewhat better than today

3 The same

4 Somewhat worse than today

5 Considerably worse than today

Comment:

In 1990 this variable was surveyed as part of a split questionnaire (comp. spl90).

pa01 SELF-PLACEMENT ON LEFT-RIGHT CONTINUUM

Many people use the terms "left" and "right" to describe differing political views. Here we have a scale that runs from left to right. If you think of your own political views, where would you place them on this scale?

1980, 1982, 1986-1998, 2000 PAPI:

Please tick one of the boxes.

(Int.: Please hand over a pencil and the questionnaire. Respondent should tick the appropriate box himself/herself on the next page. Please make sure that the tick is placed inside the box.)

2000 CAPI, 2002-2016:

Please choose one of the boxes and tell me the letter printed underneath this box.

(Int.: Please present card. <2002, 2002:> Ask for and record the appropriate letter.)

pa02a POLITICAL INTEREST, RESPONDENT(ORDINAL)

How interested in politics are you? Very strongly, strongly, middling, very little, or not at all?

(Int.: Please read the categories aloud.)

-11 1982: No participation in split 1 (code 2 in spl82)

-9 No answer

-1 Not available 1988

1 Very strongly

2 Strongly

3 Middling

4 Very little

5 Not at all

Comment:

In ALLBUS 1982 there were two different split version of this question. Split 1 used this 5-point scale, while split 2 used the 10-point scale documented in pa02b (also comp. spl82).

pa02b POLITICAL INTEREST, RESPONDENT (SCALE)

How strongly are you interested in politics?

Here we have a scale that runs from "not at all" to "very strongly." Where would you place yourself on this scale? Please, tick one of the boxes.

(Int.: Hand over a pencil. The respondent should tick the box him-/herself. Please make sure that the tick is placed inside the box.)

pa03 DO YOU TEND TO SUPPORT A POLITIC. PARTY?

Many people in Germany tend to support a particular political party over a long period of time although they may also occasionally vote for another party.

What about you?

Do you - in general - tend to support a particular political party?

-11 2000 CAPI: No participation in split 1 (code 2 in spltt00)

-9 No answer

-7 Refused

-1 Not available 1980, 1984-1988, 1991-1998, 2004, 2006, 2010-2016

1 Yes

2 No

Comment:

In 2000 this variable was surveyed as part of a split questionnaire (comp. spltt00).

pv02 ELIGIBLE TO VOTE LAST FEDERAL ELECTION?

Until 1990:

Interview is conducted in:

- The Federal Republic of Germany (go to pv02)
- West-Berlin (go to pv07)

(Int.: Choose without asking respondent.)

1984-2004:

The last federal election took place on...

<1984, 1986: 06.03.1983

1988, 1990: 25.01.1987

1991, 1992: 02.12.1990

1998: 16.10.1994

2002: 27.09.1998

2004: 22.09.2002>.

Until 1992:

Were you eligible to vote at this time?

From 1998:

Were you eligible to vote in this election?

-13 2004: No participation in ISSP

-11 1990: No participation in split 2 (code 1 in spltt90)

-10 1984 to 1990: Respondent lives in West Berlin

-9 No answer

-1 Not available 1980, 1982, 1994, 1996, 2000, 2006-2016

1 Yes

2 No

Comment:

In 1990 this variable was surveyed as part of a split questionnaire (comp. spltt90).

In 2004, this question was part of the ISSP-modules surveyed together with ALLBUS. As a rule ISSP-questions are not included in this cumulative data set. However, because the question documented here has also been part of the ALLBUS-interview several times, the ISSP-data was included in this data set. Please note that, in contrast to the ALLBUS interview, the ISSP-modules are surveyed as self-completion questionnaires.

2 No

Comment:

In 1990 this variable was surveyed as part of a split questionnaire (comp. spltt90).

In 2004, 2012, 2014 and 2016 this question was part of the ISSP-modules surveyed together with ALLBUS. As a rule ISSP-questions are not included in this cumulative data set. However, because the question documented here has also been part of the ALLBUS-interview several times, the ISSP-data was included in this data set. Please note that, in contrast to the ALLBUS interview, the ISSP-modules are surveyed as self-completion questionnaires.

Derivation of data:

Because skip patterns for this question changed substantially over the years, it was necessary to revise the assignment and coding of missing values to allow a useful cumulation of the data. Therefore, the coding of missing data in this data set differs significantly from the coding used in the cross-section data sets. Cases that skipped this question in the original surveys are documented in codes -53 to -50.

Original skip patterns:

- From 1984 to 1990 respondents were screened out if they reported being ineligible to vote (code 2 in pv02). Additionally, residents of West-Berlin (code -10 in pv02) were screened out, because they were not eligible to vote in national elections.

- In 1991, 1992, 1998, 2002 and 2004 only respondents who reported being ineligible to vote (code 2 in pv02) were screened out. Residents of West-Berlin no longer needed to be automatically screened out because they were by then regular German citizens and thus eligible to vote in national elections.

- In the surveys between 2006 and 2012, no respondents were screened out. However, in 2006 respondents could choose 'Not eligible to vote' as an explicit response option.

Comment:

In 1990 this variable was surveyed as part of a split questionnaire (comp. spl90).

In 2004, 2012, 2014 and 2016 this question was part of the ISSP-modules surveyed together with ALLBUS. As a rule ISSP-questions are not included in this cumulative data set. However, because the question documented here has also been part of the ALLBUS-interview several times, the ISSP-data was included in this data set. Please note that, in contrast to the ALLBUS interview, the ISSP-modules are surveyed as self-completion questionnaires.

This variable has been recoded so as to conform with the standardized ALLBUS coding. The sequence of answer categories shown in this documentation therefore deviates from that actually used in the field.

pv12 CDU SYMPATHY-THERMOMETER

1980:

I would like to know what you think about these political parties today:

CDU, SPD, CSU, FDP, NPD, DKP and The Greens.

1984:

I would like to know what you think about these political parties today:

CDU, SPD, CSU, FDP, The Greens, NPD and DKP.

1994:

I would like to know what you think about these political parties today:

CDU, SPD, CSU, FDP, Alliance 90/The Greens, The Republicans and PDS.

1980, 1984, 1994:

Here we have something like a thermometer. The further up you go on the white boxes, the more sympathy you feel for a particular party. The further down you go on the black boxes, the more you dislike this particular party.

Let's start with the CDU.

(Int.: Present card "Thermometer" (+5 to -5). Circle the reading chosen for each party and be careful not to confuse + and -.)

Generally speaking, what do you think of the Christian Democratic Union <CDU>?

Comment:

Party-sympathy scales were first surveyed in the ALLBUS program in 1980 using a list of seven parties. As documented in the question text, subsequent surveys used adapted lists to fit the developing political landscape. For this cumulation, the data gathered for the parties on the extremes of the political spectrum - NPD and The Republicans on the right, DKP and PDS on the left - was merged into one variable each, so that there are three uniform data points for a total of seven party-sympathy scales covering comparable political positions.

pv17 PDS+DKP SYMPATHY-THERMOMETER

1980:

I would like to know what you think about these political parties today:

CDU, SPD, CSU, FDP, NPD, DKP and The Greens.

1984:

I would like to know what you think about these political parties today:

CDU, SPD, CSU, FDP, The Greens, NPD and DKP.

1994:

I would like to know what you think about these political parties today:

CDU, SPD, CSU, FDP, Alliance 90/The Greens, The Republicans and PDS.

1980, 1984, 1994:

Here we have something like a thermometer. The further up you go on the white boxes, the more sympathy you feel for a particular party. The further down you go on the black boxes, the more you dislike this particular party.

Let's start with the CDU.

(Int.: Present card "Thermometer" (+5 to -5). Circle the reading chosen for each party and be careful not to confuse + and -.)

1980, 1984:

And what do you think of the German Communist Party <DKP>?

1994:

And what do you think of the Party of Democratic Socialism <PDS>?

Comment:

Party-sympathy scales were first surveyed in the ALLBUS program in 1980 using a list of seven parties. As documented in the question text, subsequent surveys used adapted lists to fit the developing political landscape. For this cumulation, the data gathered for the parties on the

extremes of the political spectrum - NPD and The Republicans on the right, DKP and PDS on the left - was merged into one variable each, so that there are three uniform data points for a total of seven party-sympathy scales covering comparable political positions.

pv19 PROBABILITY: VOTE FOR CDU-CSU

There is a large number of political parties in Germany. Each one of them would like to have your vote at elections. Please tell me, for each of the following parties, how likely it is that you would ever vote for this party.

Please use this scale.

- 1 on the scale means that it is very unlikely for you.
- 10 on the scale means that it is very likely for you.

You can differentiate your answers using the numbers in between.

(Int.: Please read out statements.

If respondent is not entitled to vote, please ask her/him to answer as if s/he were entitled to vote.)

What about the Christian Democratic/Christian Social Union <CDU/CSU>?

pp01 POLIT.ACTIVITY: CITIZENS INITIATIVE

This question deals with types of behaviour that various people have on occasion chosen in order to protest against something or to make the public aware of a particular issue.

I am now going to read out some of these types of behaviour. Please tell me for each one whether you yourself have ever taken part in such an activity.

If you have not yet taken part in such an activity, please tell me whether you would take part in one, whether you would only take part under extraordinary circumstances, or whether you would not take part under any circumstances.

(Int.: Please present card. Read out the statements.

Please mark one answer for each statement.)

Citizens' action group

-11 2000 CAPI: No participation in split 1 (code 2 in spl00)

-9 No answer

-8 Don't know

-7 Refused

-1 Not available 1980-1986, 1994-1998, 2002-2016

1 Have already taken part in such an activity

2 Would take part if the issue was an important one

3 Would take part in an extraordinary situation

4 Would take part under no circumstances

5 Am not familiar with

Comment:

In 1988 and 2000 this variable was surveyed as part of a split questionnaire (comp. spl088 and spl000).

pp18 WOULD DO: REFUSE TO VOTE

(Int.: Please shuffle card pack and give to respondent.)

If you wanted to have political influence or to make your point of view felt on an issue which was important to you: which of the possibilities listed on these cards would you use? Which of them would you consider?

Please name the corresponding letter.

1998:

(Int.: Please circle all the letters named by the respondent on the list.)

2002:

(Int.: Please record all the letters named by the respondent.)

2008:

(Int.: Please mark all the letters named.)

Not vote in elections out of protest.

pp30 ALREADY DONE: UNAUTHORIZED DEMO

1988:

Which of these things have you already done, what have you already taken part in?

Please shuffle all the cards again and give them to the respondent.

(Int.: Please shuffle all the cards again and give them to the respondent. Please circle the letters of all selected cards on the list.)

1998, 2008:

(Int.: Please shuffle all the cards again and give them to the respondent.)

Which of these things have you already done, what have you already taken part in?

Please hand me the corresponding cards.

(Int.: <1998>: Please circle the letters of all selected cards on the list.)

2002:

(Int.: Please shuffle all the cards again and give them to the respondent.)

Which of these things have you already done, what have you already taken part in?

Again, please tell me the appropriate letters.

(Int.: Please record the answer codes for the letters named.)

Take part in an unauthorized demonstration.

pa05 DEVELOP NUCLEAR ENERGY FOR FUTURE NEEDS

Now we would like to hear your views on some political problems. Using this scale, please tell me to what extent you agree with the following statements. Number 1 means that you completely disagree with the statement, number 7 means that you agree completely with it. You can use the numbers between 1 and 7 to qualify your response.

(Int.: Please present card)

Nuclear technology should be developed further to cover our energy needs in the future.

-11 1990: No participation in split 2 (code 1 in split90)

-9 No answer

-8 Don't know

-7 Refused

-1 Not available 1982-1988, 1991-2016

1 Completely disagree

2 ..

3 ..

4 ..

5 ..

6 ..

7 Agree completely

Comment:

In 1990 this variable was surveyed as part of a split questionnaire (comp. spl90).

pa06 DEATH PENALTY FOR TERRORISM?

Now we would like to hear your views on some political problems. Using this scale, please tell me to what extent you agree with the following statements. Number 1 means that you completely disagree with the statement, number 7 means that you agree completely with it. You can use the numbers between 1 and 7 to qualify your response.

(Int.: Please present card)

The death penalty should be introduced for terrorist acts of violence.

-11 1990: No participation in split 2 (code 1 in split90)

-9 No answer

-8 Don't know

-7 Refused

-1 Not available 1982-1986, 1991-2016

1 Completely disagree

2 ..

3 ..

4 ..

5 ..

6 ..

7 Agree completely

Comment:

In 1990 this variable was surveyed as part of a split questionnaire (comp. spl90).

Note:

Views on Political Problems: "The death penalty should be introduced for terrorist acts of violence."

In 1980 and 1990 the question concerning the death penalty for terrorist acts of violence (pa06) was surveyed as part of the item battery on political problems documented here in pa05 to pa08.

In ALLBUS 1988 this question was surveyed in a four-item battery on political extremism (F22 in ALLBUS 1988 (ZA1670)), which has not been replicated since. The first two questions asked whether a communist or a neo-Nazi should be allowed to teach 15 year old schoolchildren. These were followed by the question concerning the death penalty for terrorist acts of violence. The fourth question finally asked whether the death penalty should be introduced for child murderers.

pi05 RESP.: REDUCE WELFARE MEASURES?

Some people think that the government should provide fewer services, e.g. in areas such as health and education, in order to reduce spending. Other people feel it is important for the government to continue the services it now provides even if it means no reduction in spending.

Where would you place yourself on this scale, or haven't you thought much about it?

(Int.: Please present card and leave on display until pi06, fill in the appropriate answer codes.)

pi07 REDUCE TAXES OR MORE SOCIAL SERVICE

If the government had the choice between reducing taxes or spending more on social programs, what do you think it should do? Reduce taxes or spend more on social programs.

-13 1996: No participation in ISSP

-9 No answer

-8 Don't know

-7 Refused

-1 Not available 1982-1988, 1992, 1994, 1998-2008, 2012-2016

1 Reduce taxes

2 Spend more on social services

Comment:

In 1996, this question was part of the ISSP-modules surveyed together with ALLBUS. As a rule ISSP-questions are not included in this cumulative data set. However, because the question documented here has also been part of the ALLBUS-interview several times, the ISSP-data was included in this data set. Please note that, in contrast to the ALLBUS interview, the ISSP-modules are surveyed as self-completion questionnaires.

pd06 OPPOSITION SHOULD SUPPORT GOVERNMENT

We have collected a list of frequently heard assertions reflecting different opinions about people's behaviour. Now we would like to find out what people really think about these assertions. Please, tell us your position on each assertion as follows:

+3 = Complete agreement

+2 = Agreement in essential parts

+1 = Weak agreement

-1 = Weak disagreement

-2 = Disagreement in essential parts

-3 = Complete disagreement

(Int.: Mix cards and present together with list. Circle one answer on each line.)

It is not the job of the political opposition to criticise the government but to support its work.

pe03 I HAVE NO INFLUENCE ON THE GOVERNMENT

(Int.: Please present card.)

On this list, there are a number of opinions one can hear now and then. For each opinion, please tell me if you: completely agree, tend to agree, tend not to agree, or completely disagree.

(Int.: Circle one reference number per item.)

However you look at it, people like me have no influence on what the government does.

pc04 CONFLICTS: PARENTS VS. CHILDLESS PEOPLE

1980 (split 1), 1990 (split 2), 2010:

It is often said that there are conflicts of interest between different groups in the Federal Republic

- for example between different political groups, between men and women, etc.

However, these conflicts are not all equally strong.

I'll list a few such groups and please tell me whether, in your opinion, these conflicts are very strong, rather strong, fairly weak, or whether you think there is no conflict at all between these groups.

(Int.: Please present card. Read out the items and circle one answer for each item.)

1980 (Split 2):

It is often said that there are oppositions of interest between different groups in the Federal Republic - for example between different political groups, between men and women, etc.

However, these oppositions are not all equally strong.

I'll list a few such groups and please tell me whether, in your opinion, these oppositions are very strong, rather strong, fairly weak, or whether you think there is no opposition at all between these groups.

(Int.: Please present card. Read out the items and circle one answer for each item.)

1980 (split 1), 1990 (split 2), 2010:

Conflict between people with children and those without children.

1980 (split 2):

Opposition between people with children and those without children.

-11 1990: No participation in split 2 (code 1 in split90)

-9 No answer

-8 Don't know

pc10 CONFLICTS: GUEST WORKERS VS. GERMANS

1980 (split 1), 1990 (split 2), 2010:

It is often said that there are conflicts of interest between different groups in the Federal Republic

- for example between different political groups, between men and women, etc.

However, these conflicts are not all equally strong.

I'll list a few such groups and please tell me whether, in your opinion, these conflicts are very strong, rather strong, fairly weak, or whether you think there is no conflict at all between these groups.

(Int.: Please present card. Read out the items and circle one answer for each item.)

1980 (Split 2):

It is often said that there are oppositions of interest between different groups in the Federal

Republic - for example between different political groups, between men and women, etc.

However, these oppositions are not all equally strong.

I'll list a few such groups and please tell me whether, in your opinion, these oppositions are very strong, rather strong, fairly weak, or whether you think there is no opposition at all between these groups.

(Int.: Please present card. Read out the items and circle one answer for each item.)

1980 (split 1), 1990 (split 2), 2010:

Conflict between guest workers <2010: foreigners> and Germans.

1980 (split 2):

Opposition between guest workers and Germans.

-11 1990: No participation in split 2 (code 1 in split90)

-9 No answer

-8 Don't know

-1 Not available 1982-1988, 1991-2008, 2012-2016

1 There is none

2 Fairly weak

3 Rather strong

4 Very strong

Comment:

In 1980 and 1990 this variable was surveyed as part of a split questionnaire (comp. splt80 and splt90).

The original cross-section surveys comprised a number of additional items which have not yet been replicated. These items are not part of this cumulated data set. However, they are available in the original cross-section data sets.

pt04 TRUST: MUNICIPAL ADMINISTRATION

I am now going to read out a number of public institutions and organisations.

Please tell me for each institution or organisation how much trust you place in it. Please use this scale. 1 means you have absolutely no trust at all, 7 means you have a great deal of trust. You can differentiate your answers using the numbers in between.

(Int.: Please present card.

Read out the items and tick one answer each.)

What about...

the municipal administration?

pt10 TRUST: NEWSPAPERS

I am now going to read out a number of public institutions and organisations.

Please tell me for each institution or organisation how much trust you place in it. Please use this scale. 1 means you have absolutely no trust at all, 7 means you have a great deal of trust. You can differentiate your answers using the numbers in between.

(Int.: Please present card.

Read out the items and tick one answer each.)

What about...

the press?

pt16 TRUST: JOB CENTERS

I am now going to read out a number of public institutions and organisations.

Please tell me for each institution or organisation how much trust you place in it. Please use this scale. 1 means you have absolutely no trust at all, 7 means you have a great deal of trust. You can differentiate your answers using the numbers in between.

(Int.: Please present card.

Read out the items and tick one answer each.)

What about...

job centres?

pr04 REUNIFICATION MORE ADVANTAGES FOR WEST

Until 1992:

Here are some statements. Please tell me for each statement whether you: completely agree, tend to agree, tend not to agree or completely disagree.
 (Int.: Please present card.)

From 1994:

The following statements are about the situation in the old and new federal states. Please tell me for each statement whether you: completely agree, tend to agree, tend not to agree or completely disagree.
 (Int.: Please present card. Please circle one response category per item.)

Reunification has brought more advantages than disadvantages for the people in the old federal states.

pr10 SOCIALISM: GOOD IDEA, POORLY IMPLEMENTED

Until 1992:

Here are some statements. Please tell me for each statement whether you: completely agree, tend to agree, tend not to agree or completely disagree.
 (Int.: Please present card.)

From 1994:

The following statements are about the situation in the old and new federal states. Please tell me for each statement whether you: completely agree, tend to agree, tend not to agree or completely disagree.
 (Int.: Please present card. Please circle one response category per item.)

Socialism is basically a good idea, it was just put into practice badly.

GOVERNMENT AGENCIES WORK TOO SLOWLY

Here is a set of statements about the behavior of civil servants working at government agencies. Think about your personal experiences in dealing with government agencies and tell me the extent to which you agree with each of these views. Use the scale at the bottom of the card to indicate your opinion: The bottom box 1 means that you completely disagree with this statement; the highest box 7 means that you agree completely. Use the numbers in between to qualify your response.

(Int.: Please present card - record answer code.)

The processing of applications and other matters in government agencies usually takes longer than actually necessary.

(Int.: Only one choice possible.)

(Int.: If three answers were selected in the answer scheme for pn01-pn07, please go on:)

And what comes second and third?

(Int.: Only one choice possible for second and third place.)

1996, 2000:

<If respondent has German citizenship>

(Int.: If at least two cards were selected, please hand these back again.)

What are you most proud of?

(Int.: Only one choice possible.)

(Int.: If three cards were selected:)

And what comes second?

(Int.: Mark remaining item in answer scheme.)

2008, 2016:

<If 3 cards had been selected in pn01-pn07, the item remaining after pn08 and pn09 was automatically coded as 3rd choice by the CAPI programme.>

<Third most important thing to be proud of>

id02 SELF-ASSESSMENT OF SOCIAL CLASS, RESP.

There is a lot of talk about social class these days. What class would you describe yourself as belonging to?

1980, 1982 (split 1), 1984-2016:

The lower class, the working class, the middle class or the upper class?

1982 (split 2):

The working class, the middle class, the upper middle class or the upper class?

-50 None of these classes (Int.: Don't read aloud.)

-9 No answer

-8 Don't know

-7 Refused to select a category

1 The lower class <1982 only in split 1>

2 The working class

3 The middle class

4 The upper middle class

5 The upper class

Comment:

In 1982 this variable was surveyed as part of a split questionnaire (comp. spltt82).

Comment:

In 1992 and from 2000 to 2016, this question was part of the ISSP-modules surveyed together with ALLBUS. As a rule ISSP-questions are not included in this cumulative data set. However, because the question documented here has also been part of the ALLBUS-interview several times, the ISSP-data was included in this data set. Please note that, in contrast to the ALLBUS interview, the ISSP-modules are surveyed as self-completion questionnaires.

This variable has been recoded so as to conform with the standardized ALLBUS coding. The sequence of answer categories shown in this documentation deviates from the coding in the data sets for ALLBUS 1988, 1990, 1992, 2000 and 2002.

id04 OCCUP.SUCCESS: COMPARISON TO FATHER

<If respondent is employed full- or part-time>

If you compare your occupational status today with that of your father, how would you assess your own occupational status: much higher, somewhat higher, roughly the same, lower <2014 split 2: somewhat lower, much lower>?

-10 Not employed full- or part-time (code 3-11 in work)

-9 No answer

-8 Occupational status of father unknown

-1 Not available 1980, 1982, 1986-1992, 1996-2012, 2016

1 Much higher

2 Somewhat higher

3 Roughly the same

4 Lower <2014 split 2: categories 'somewhat lower' and 'much lower' merged for this data set>

Comment:

In 2014 this variable was surveyed as part of a split questionnaire (comp. spl14_1).

iw04 STATE:SECURE INCOME IN TIMES OF HARDSHIP

1984, 1994, 2004, 2014:

(Int.: Shuffle card pack and hand over cards <1994: individually>.)

Here are some opinions about the state and the economy in Germany <1984: the Federal Republic>. Please tell me for each opinion, whether you completely agree, tend to agree, tend to disagree or completely disagree.

(Int.: <1984, 1994:> Mark one answer for each item.)

1991, 2000, 2010:

(Int.: Please present card.)

Here is a card with various views on what social differences in Germany are really like and how things should be.

Please tell me for each opinion whether you agree completely, tend to agree, tend to disagree or completely disagree.

The state must ensure that people can live on a decent income, even in illness, hardship, unemployment and old age.

iw05 SOCIAL SECURITY BAD FOR WORK ETHOS

(Int.: Shuffle card pack and hand over cards <1994: individually>.)

Here are some opinions about the state and the economy in Germany <1984: the Federal Republic>. Please tell me for each opinion, whether you completely agree, tend to agree, tend to disagree or completely disagree.

(Int.: <1984, 1994:> Mark one answer for each item.)

If social security benefits, such as the continuation of payments in case of illness, unemployment benefits, and early retirement pensions are as high as they are now, then this will only lead to the situation that people do not want to work anymore.

im11 WAY TO THE TOP: RIGHT SOCIAL BACKGROUND

1984, 1991, 2000 (split 2), 2004:

(Int.: Please shuffle cards and hand over.)

What is the best way to get to the top in our society?

Please rate the importance of the qualities and the situations described on these cards. Please tell me for each statement how important you think it is for getting ahead in our society today.

(Int.: <1984:> Circle one answer for each statement.)

2014 (split 1):

(Int.: Please present card.)

What is the best way to get to the top in our society?

Using the card, please rate the importance of the qualities and situations. Please tell me for each one how important you think it is for getting ahead in our society today.

(Int.: Please read out items and answers.)

<The sequence of the items was randomized by the CAPI-software.>

Social background, coming from the "right" family

-11 2000 CAPI: No participation in split 2 (code 1 in spl00); 2014: No participation in split 1 (code 2 in spl14_2)

-9 No answer

-8 Don't know

im14 SUCCESS:DEPENDS ON OWN CLASS POSITION

(Int.: Please present card.)

Here is a card with various views on what social differences in Germany <1984: the Federal Republic> are really like and how things should be.

Please go through the statements one by one and tell me whether you completely agree, tend to agree, tend to disagree or completely disagree.

(Int.: <1984, 1994:> Mark one answer code for each item.)

In Germany <1984: the Federal Republic>, the old differences between those who own and those who work still persist. One's personal status depends on whether one belongs to the upper or the lower class.

im18 DECENT INCOME EVEN WITHOUT ACHIEVEMENT

(Int.: Please present card.)

Here is a card with various views on what social differences in Germany <1984: the Federal Republic> are really like and how things should be.

Please go through the statements one by one and tell me whether you completely agree, tend to agree, tend to disagree or completely disagree.

(Int.: <1984, 1994:> Mark one answer code for each item.)

Income should not be based solely on individual achievement. Instead, everybody should have what they and their family need for a decent life.

mi03 IMMIGRATION: WORKERS FROM EU-COUNTRIES

The following questions deal with the entry as immigrants of various groups of people into Germany <1990: the Federal Republic>. What is your opinion about this?

Please use the card for your answers.

(Int.: Please present card and leave on display until mi04.)

Until 1992:

And people from EC countries coming to work here?

From 1996:

And people from EU countries coming to work here?

-11 2000 CAPI: No participation in split 2 (code 1 in spltt00); 2016: No participation in split 1 (code 2 in spltt16_2)

-9 No answer

-8 Don't know

-7 Refused

-1 Not available 1980-1988, 1994, 1998, 2002, 2004, 2008-2014

1 Entry should be unrestricted

2 Entry should be restricted

3 Entry should be stopped completely

Comment:

In 2000 and 2016 this variable was surveyed as part of a split questionnaire (comp. spltt00, spltt16_2).

mp01 FOREIGNERS DO WORK GERMANS WILL NOT DO

1996, 2016:

(Int.: Please display card.)

What about the following statements about the foreigners who live in Germany? Using the scale,
please tell me how far you agree with these statements.

2006:

(Int.: Please display card.)

What about the following statements about the foreigners who live in Germany? Using the scale,
please tell me how far you agree with these statements.

1 on the scale means you "completely disagree."

7 on the scale means you "completely agree."

You can differentiate your answers using the numbers in between.

The foreigners who live in Germany do the work Germans don't want to do.

md03 TREATMENT OF FOREIGN.BY MUNICIPAL OFFICE

(Int.: Please display card.)

Let's assume a foreigner needed to approach a municipal office on some matter - e.g. a tax or housing matter. How do you think he or she would be treated?

(Int.: Only one choice possible.)

-9 No answer

-1 Not available 1980-1994, 1998-2004, 2008-2016

1 A He or she would be treated EXACTLY LIKE a German

2 B He or she would be treated WORSE than a German

3 C He or she would be treated BETTER than a German

4 It depends

Comment:

Variables mn01-mn08 were surveyed in random order. In 1996, shuffle cards were used, while in 2006 and 2016 randomization was carried out by the interviewing software. In 2006, the item battery was extended to include mn09. This new item was exempt from randomization and was always asked as the final question of the battery in 2006 and 2016.

In 2016 this variable was surveyed as part of a split questionnaire (comp. spl16_4).

ma01 FOREIGN.,GUEST WORKERS: ADAPT MORE

1980:

(Int.: Please hand over card.)

On this card, there are some statements we have all heard at some time or other when talking about guest workers.

Please tell me for each statement to what extent you agree with it. Again please use the scale below to indicate your opinion

(Int.: Record answers here.)

1984 to 1990, 1994 (split 1):

<1994: If respondent has German citizenship>

(Int.: Please present card.)

This question is about the guest workers who live here in the Federal Republic (1994: in Germany):

On this card, there are some statements we have all heard at some time or other when talking about guest workers. Please tell me for each statement to what extent you agree with it. 1 on the scale means you 'completely disagree', 7 on the scale means you 'completely agree'. You can use the numbers in between to differentiate your answer.

(Int.: Record answers here.)

1994 (split 2), 1996, 2000, 2002, 2006 (split 1 - CAPI), 2010, 2012, 2016:

<If respondent has German citizenship>

(Int.: Please present card.)

This question is about the foreigners who live in Germany.

On this card, there are some statements we have all heard at one time or another. Please tell me for each statement to what extent you agree with it.

> 1 on the scale means you 'completely disagree',

> 7 on the scale means you 'completely agree'.

You can use the numbers in between to differentiate your answer.

2006 (split 2 - CASI):

<If respondent has German citizenship>

(Int.: Please hand over your pen to the respondent and turn the laptop so that the respondent can fill in the answers to the next question on his/her own.)

(Int.: Should there be questions concerning the use of the laptop, feel free to explain. However, don't interfere with the respondent answering the survey questions.)

Please answer the next question on your own. Touch the screen with the pen to mark the answer you think best fits your opinion.

This question is about the foreigners who live in Germany.

On this card, there are some statements we have all heard at some time or other when talking about guest workers.

Please tell me for each statement to what extent you agree with it. Again please use the scale below to indicate your opinion

(Int.: Record answers here.)

1984 to 1990, 1994 (split 1):

<1994: If respondent has German citizenship>

(Int.: Please present card.)

This question is about the guest workers who live here in the Federal Republic (1994: in Germany):

On this card, there are some statements we have all heard at some time or other when talking about guest workers. Please tell me for each statement to what extent you agree with it. 1 on the scale means you 'completely disagree', 7 on the scale means you 'completely agree'. You can use the numbers in between to differentiate your answer.

(Int.: Record answers here.)

1994 (split 2), 1996, 2000, 2002, 2006 (split 1 - CAPI), 2010, 2012, 2016:

<If respondent has German citizenship>

(Int.: Please present card.)

This question is about the foreigners who live in Germany.

On this card, there are some statements we have all heard at one time or another. Please tell me for each statement to what extent you agree with it.

> 1 on the scale means you 'completely disagree',

> 7 on the scale means you 'completely agree'.

You can use the numbers in between to differentiate your answer.

2006 (split 2 - CASI):

<If respondent has German citizenship>

(Int.: Please hand over your pen to the respondent and turn the laptop so that the respondent can fill in the answers to the next question on his/her own.)

(Int.: Should there be questions concerning the use of the laptop, feel free to explain. However, don't interfere with the respondent answering the survey questions.)

Please answer the next question on your own. Touch the screen with the pen to mark the answer you think best fits your opinion.

This question is about the foreigners who live in Germany.

On this card, there are some statements we have all heard at one time or another. Please tell me for each statement to what extent you agree with it.

> 1 on the scale means you 'completely disagree',

> 7 on the scale means you 'completely agree'.

You can use the numbers in between to differentiate your answer.

To mark your answer, please touch the screen at the dot below the number of the answer category that best fits your opinion.

Until 1990, 1994 (split 1):

Guest workers should choose to marry people of their own nationality.

1994 (split 2), 1996, 2000, 2002, 2006, 2012, 2016:

Foreigners living in Germany should choose to marry people of their own nationality.

-11 1990: No participation in split 2 (code 1 in spl90); 2000: CAPI (code 1 in split00)

-10 From 1994: no German citizenship (code 3 in german)

-9 No answer

-8 Don't know

-7 Refused

-1 Not available 1982, 1986, 1991, 1992, 1998, 2004, 2008, 2014

1 Completely disagree

2 ..

3 ..

4 ..

5 ..

6 ..

7 Completely agree

Comment:

In 1990, 1994, 2000, 2006 and 2016 this variable was surveyed as part of a split questionnaire (comp. spl90, spl94, spl00, spl06 and spl16_3).

ma08 RELIG.INSTRUCTION FOR MUSLIMS IN SCHOOLS

(Int.: Please display card.)

It is being debated whether there should be Islamic religious instruction for Muslim children in state schools.

What is your opinion about this:

Should there be Islamic religious instruction in state schools,
 should there only be Christian religious instruction or
 should there be no religious instruction at all in state schools?

In state schools in Germany, there should be -

-9 No answer

-1 Not available 1980-1994, 1998, 2000, 2004, 2008, 2010, 2014

1 A Islamic religious instruction too

2 B only Christian religious instruction

3 C no religious instruction at all

mj03 JEWS: TAKE ADVANTAGE OF GERMAN NAZI PAST

<2012, 2016: If respondent does not belong to a Jewish religion>

(Int.: Please display card.)

Every now and then, one hears different opinions about Jewish people. Some of these are listed on the card.

Using the card, would you please tell me to what extent you agree or disagree with these statements?

Many Jewish people try to take personal advantage today of what happened during the Nazi era and make Germans pay for it.

-10 2012, 2016: Respondent belongs to a Jewish religion (code 2 in rd03)

fn04 WHAT IS THE IDEAL NUMBER OF CHILDREN?

1980, 1982:

What do you consider the ideal family size to be today: father, mother and how many children?

(Int.: Fill in the number of children)

ISSP - 1988, 1994, 2012:

All in all, what do you consider to be the ideal number of children for a family?

(Int.: Fill in the number of children)

-13 1988, 1994 and 2012: No participation in ISSP

-9 No answer

-8 Don't know

-7 Refused

-1 Not available 1984, 1986, 1990-1992, 1996-2010, 2014, 2016

0 No child

Comment:

In 1988, 1994 and 2012 this question was part of the ISSP-modules surveyed together with ALLBUS. As a rule ISSP-questions are not included in this cumulative data set. However, because the question documented here has also been part of the ALLBUS-interview several times, the ISSP-data was included in this data set. Please note that, in contrast to the ALLBUS interview, the ISSP-modules are surveyed as self-completion questionnaires.

fr01 WORKING WOMAN:WARM RELATION TO CHILD OK

(Int.: <2016:> Please present card.)

People have different opinions about the role of women in the family and in bringing up children.

For each of the statements on the card, please tell me whether you completely agree, tend to agree, tend to disagree, or completely disagree.

(Int.: <Until 2012:> Please present card. Record one answer code for each statement.

<2016:> Please make sure you are using the right card <i.e. the card for split 1>.)

A working mother can establish just as loving and secure a relationship with her children as a mother who doesn't work.

-11 2012, 2016: No participation in split 1 (code 2 in spl12_2, spl16_1)

-9 No answer

-8 Don't know

-1 Not available 1980, 1984-1990, 1994, 1998, 2002, 2006, 2010, 2014

1 Completely agree

2 Tend to agree

3 Tend to disagree

4 Completely disagree

Comment:

In 2012 and 2016 this variable was surveyed as part of a split questionnaire (comp. spl12_2, spl16_1).

fr02 WIFE:IMP.TO HELP HUSBAND WITH HIS CAREER

(Int.: <2016:> Please present card.)

People have different opinions about the role of women in the family and in bringing up children.

For each of the statements on the card, please tell me whether you completely agree, tend to agree, tend to disagree, or completely disagree.

(Int.: <Until 2012:> Please present card. Record one answer code for each statement.

<2016:> Please make sure you are using the right card <i.e. the card for split 1>.)

It's more important for a wife to help her husband with his career than to pursue her own career.

-11 2012, 2016: No participation in split 1 (code 2 in spl12_2, spl16_1)

-9 No answer

fr07 WORKING WOMAN CAN BE GOOD MOTHER

(Int.: Please present card.)

People have different opinions about the role of mothers and fathers.

For each of the following statements, please tell me whether you -
 completely agree,
 tend to agree,
 tend to disagree or
 completely disagree.

(Int.: Please make sure you are using the right card.)

A mother working full-time can normally establish just as close a relationship with her small child
 as a mother who doesn't work.

Comment:

In 2012 and 2016 this variable was surveyed as part of a split questionnaire (comp. spl12_2,
 spl16_1).

In 2012 this question battery comprised one additional item. This item, which has not been
 replicated so far, was: "The best way to organise family and work life is for both partners to work
 part-time and to look after the home and children equally" (comp. V113 in ZA4614).

Comment:

In 2012 and 2016 this variable was surveyed as part of a split questionnaire (comp. spl12_2, spl16_1).

In 2012 this question battery comprised one additional item. This item, which has not been replicated so far, was: "The best way to organise family and work life is for both partners to work part-time and to look after the home and children equally" (comp V113 in ZA4614).

Comment:

In 1994, this question was part of the ISSP-modules surveyed together with ALLBUS. As a rule ISSP-questions are not included in this cumulative data set. However, because the question documented here has also been part of the ALLBUS-interview several times, the ISSP-data was included in this data set. Please note that, in contrast to the ALLBUS interview, the ISSP-modules are surveyed as self-completion questionnaires.

fe05 EDUCATIONAL GOALS: GOOD GRADES

Our next question concerns the area of education. On these cards there are some characteristics and abilities which can be furthered by education. How important to you personally are these educational goals? Think in terms of a child of about ten years. Once again, please use the scale on the side of the cards.

(Int.: Shuffle card pack and hand over. Please, fill in the answer code for each card.)

Good grades

-11 1982: No participation in split 1 (code 2 in spl82)

fe13 CHILD: EDUCATIONAL AIM TO OBEY

1992:

(Int.: Please present card and leave on display until fe17.)

Which of the items on the card do you consider the most important thing a child needs to learn to prepare himself or herself for life?

(Int.: Only one choice possible.)

What do you consider the second most important?

(Int.: Only one choice possible.)

What is the third most important?

(Int.: Only one choice possible.)

What is the fourth most important?

(Int.: Only one choice possible.)

Tick remaining option as 'fifth'.

Please enter a tick in each column.)

1996, 2000:

(Int.: Please present card and leave on display until fe17.)

Which of the items on the card do you consider the most important thing a child needs to learn to prepare himself or herself for life?

(Int.: Please enter a tick in each column.)

What do you consider the second most important?

What is the third most important?

And the fourth most important?

<2000:> What is the fifth most important?

(Int.: <1996:> Tick remaining option as 'fifth'.)

To obey

fe20 DESIRABLE QUALITIES F.CHILDREN: HONESTY

A Which three qualities listed on this card would you say are the most desirable for a child to have?

(Int.: Present card and leave on display until part D of this question. Mark three responses in column A for this question.)

B Which one of these three is the most desirable of all?

(Int.: Read out the three items chosen before. Let respondent pick the most important one. Mark this item in column B.)

C All of the qualities listed on this card may be desirable, but could you tell me which three you consider least important?

(Int.: Mark these three responses in column C.)

D And which one of these three is least important of all?

(Int.: Read out the items marked in column C. Let respondent pick the least important one. Mark this item in column D.)

...that it is honest

-11 1982: No participation in split 2 (code 1 in spl82)

-9 No answer

-1 Not available 1980, 1984-1991, 1994-2016

1 Least important

2 Among the 3 least important

3 Not rated by respondent

4 Among the 3 most desirable

5 The most desirable

Comment:

In 1982 this variable was surveyed as part of a split questionnaire (comp. spl82).

fe27 DESIRABLE QUAL.F.CHILDREN:RESPONSIBILITY

A Which three qualities listed on this card would you say are the most desirable for a child to have?

(Int.: Present card and leave on display until part D of this question. Mark three responses in column A for this question.)

B Which one of these three is the most desirable of all?

(Int.: Read out the three items chosen before. Let respondent pick the most important one. Mark this item in column B.)

C All of the qualities listed on this card may be desirable, but could you tell me which three you consider least important?

(Int.: Mark these three responses in column C.)

D And which one of these three is least important of all?

(Int.: Read out the items marked in column C. Let respondent pick the least important one. Mark this item in column D.)

...that it is responsible

-11 1982: No participation in split 2 (code 1 in spl82)

-9 No answer

-1 Not available 1980, 1984-1991, 1994-2016

1 Least important

2 Among the 3 least important

3 Not rated by respondent

4 Among the 3 most desirable

5 The most desirable

Comment:

In 1982 this variable was surveyed as part of a split questionnaire (comp. spl82).

Ip01 AGREE: SHLD BE GRATEFUL FOR THE LEADERS

1996, 2006, 2016:

<If respondent has German citizenship>

1996, 2002, 2006, 2012:

(Int.: Please display card.)

To what extent do you agree with the following statements?

Please answer using the scale on this card.

1 on the scale means you 'completely disagree'.

7 on the scale means you 'completely agree'.

You can differentiate your answers using the numbers in between.

We should be grateful for leaders who can tell us exactly what to do and how to do it.

-10 1996, 2006, 2016: no German citizenship (code 3 in german; 2016: codes 3, -32 in german)

-9 No answer

li01 IMPORTANCE: OWN FAMILY AND CHILDREN

1980-1998:

The cards here list various spheres of life. We would like to know how important each of these spheres of life is for you.

(Int.: Please shuffle card pack and display.

First explain the response scale using any card.)

On the right hand side of each of these cards is a scale with 7 categories. The category at the bottom with the number 1 means this sphere of life is unimportant to you.

Category number 7 at the very top means this sphere of life is very important to you.

You can use the numbers in between to differentiate your answers.

(Int.: Please hand over all the cards together.)

Please look at all the cards first. Then for each card tell me the letter on the card and the number you have chosen.

(Int.: One response category must be circled for each card)

2012:

(Int.: Please present card.)

The card here lists various spheres of life.

We would like to know how important each of these spheres of life is for you.

Please answer using the scale on the card.

The category at the bottom with the number 1 means this sphere of life is unimportant to you.

Category number 7 at the very top means this sphere of life is very important to you.

You can use the numbers in between to differentiate your answers.

Please, have a look at all the items on the list first.

(Int.: First of all, let respondent read through the list, then read out statements and get them rated.)

Own family and children

li02 IMPORTANCE: JOB AND WORK

1980-1998:

The cards here list various spheres of life. We would like to know how important each of these spheres of life is for you.

(Int.: Please shuffle card pack and display.

First explain the response scale using any card.)

On the right hand side of each of these cards is a scale with 7 categories. The category at the bottom with the number 1 means this sphere of life is unimportant to you.

Category number 7 at the very top means this sphere of life is very important to you.

You can use the numbers in between to differentiate your answers.

(Int.: Please hand over all the cards together.)

Please look at all the cards first. Then for each card tell me the letter on the card and the number you have chosen.

(Int.: One response category must be circled for each card)

2012:

(Int.: Please present card.)

The card here lists various spheres of life.

We would like to know how important each of these spheres of life is for you.

Please answer using the scale on the card.

The category at the bottom with the number 1 means this sphere of life is unimportant to you.

Category number 7 at the very top means this sphere of life is very important to you.

You can use the numbers in between to differentiate your answers.

Please, have a look at all the items on the list first.

(Int.: First of all, let respondent read through the list, then read out statements and get them rated.)

1980-1998:

The cards here list various spheres of life. We would like to know how important each of these spheres of life is for you.

(Int.: Please shuffle card pack and display.

First explain the response scale using any card.)

On the right hand side of each of these cards is a scale with 7 categories. The category at the bottom with the number 1 means this sphere of life is unimportant to you.

Category number 7 at the very top means this sphere of life is very important to you.

You can use the numbers in between to differentiate your answers.

(Int.: Please hand over all the cards together.)

Please look at all the cards first. Then for each card tell me the letter on the card and the number you have chosen.

(Int.: One response category must be circled for each card)

2012:

(Int.: Please present card.)

The card here lists various spheres of life.

We would like to know how important each of these spheres of life is for you.

Please answer using the scale on the card.

The category at the bottom with the number 1 means this sphere of life is unimportant to you.

Category number 7 at the very top means this sphere of life is very important to you.

You can use the numbers in between to differentiate your answers.

Please, have a look at all the items on the list first.

(Int.: First of all, let respondent read through the list, then read out statements and get them rated.)

ja01 ASPECTS OF JOBS: JOB SECURITY

1980, 1982 (split 1), 1991:

On these cards there are various aspects of the world of work and careers. How important to you personally are these job characteristics?

For your answers, please use the scale from 1 to 7.

(Int.: Shuffle card pack and hand over cards individually, one by one, and let respondent choose an answer. Record one answer code for each card.)

2010 (card deck):

On these cards there are various aspects of the world of work and careers. How important to you personally are these job characteristics?

(Int.: Show any card to explain the answer scale:)

On the right hand side of each of these cards is a scale with 7 categories. The category at the bottom with the number 1 means this sphere of life is unimportant to you.

Category number 7 at the very top means this sphere of life is very important to you.

You can use the numbers in between to differentiate your answers.

(Int.: Hand over cards individually.)

2010 (CAPI, computerized randomization):

I will now present you with various aspects of the world of work and careers. How important to you personally are these job characteristics?

(Int.: Present card.)

On this card there is a scale with 7 categories. The category at the bottom with the number 1 means this sphere of life is unimportant to you. Category number 7 at the very top means this sphere of life is very important to you.

You can use the numbers in between to differentiate your answers.

(Int.: Read out items.)

Job security

5 ..

6 ..

7 7 - very important

Comment:

In 1982 this variable was surveyed as part of a split questionnaire (comp. spl82).

Note:

The questions concerning the importance of various job characteristics were asked in varying contexts and constellations in the original surveys:

- ALLBUS 1980 surveyed a list of 10 items (ja01 to ja10). The item sequence was randomized using shuffle cards.

- ALLBUS 1982 and ALLBUS 1991 surveyed an extended list comprising 13 items (ja01 to ja13). The item sequence was randomized using shuffle cards.

- ALLBUS 1992 and ALLBUS 2000 surveyed a subset of the extended list comprising 6 items (ja02, ja03, ja06, ja07, ja10 and ja11). The item sequence was randomized using shuffle cards.

- ALLBUS 2010 surveyed a list comprising 11 items (ja01 to ja11). A two-group split-ballot design was used to test different methods of randomizing the item sequence. In one split-half items were randomized using shuffle cards. In the other split-half the item sequence was randomized by the interview software. Variables ja01-ja11 contain the data for both split-halves. A corresponding split identifier has not been included in this data set. Users interested in the 2010 split-experiment are advised to refer to the original documentation and data.

ja03 ASPECTS OF JOBS: OPPORT.S FOR PROMOTION

1980, 1982 (split 1), 1991, 1992, 2000:

On these cards there are various aspects of the world of work and careers. How important to you personally are these job characteristics?

For your answers, please use the scale from 1 to 7.

(Int.: Shuffle card pack and hand over cards individually, one by one, and let respondent choose an answer. Record one answer code for each card.)

2010 (card deck):

On these cards there are various aspects of the world of work and careers. How important to you personally are these job characteristics?

(Int.: Show any card to explain the answer scale:)

On the right hand side of each of these cards is a scale with 7 categories. The category at the bottom with the number 1 means this sphere of life is unimportant to you.

Category number 7 at the very top means this sphere of life is very important to you.

You can use the numbers in between to differentiate your answers.

(Int.: Hand over cards individually.)

2010 (CAPI, computerized randomization):

I will now present you with various aspects of the world of work and careers. How important to you personally are these job characteristics?

(Int.: Present card.)

On this card there is a scale with 7 categories. The category at the bottom with the number 1 means this sphere of life is unimportant to you. Category number 7 at the very top means this sphere of life is very important to you.

You can use the numbers in between to differentiate your answers.

(Int.: Read out items.)

Good opportunities for advancement

7 7 - very important

Comment:

In 1982 this variable was surveyed as part of a split questionnaire (comp. spl182).

Note:

The questions concerning the importance of various job characteristics were asked in varying contexts and constellations in the original surveys:

- ALLBUS 1980 surveyed a list of 10 items (ja01 to ja10). The item sequence was randomized using shuffle cards.

- ALLBUS 1982 and ALLBUS 1991 surveyed an extended list comprising 13 items (ja01 to ja13). The item sequence was randomized using shuffle cards.

- ALLBUS 1992 and ALLBUS 2000 surveyed a subset of the extended list comprising 6 items (ja02, ja03, ja06, ja07, ja10 and ja11). The item sequence was randomized using shuffle cards.

- ALLBUS 2010 surveyed a list comprising 11 items (ja01 to ja11). A two-group split-ballot design was used to test different methods of randomizing the item sequence. In one split-half items were randomized using shuffle cards. In the other split-half the item sequence was randomized by the interview software. Variables ja01-ja11 contain the data for both split-halves. A corresponding split identifier has not been included in this data set. Users interested in the 2010 split-experiment are advised to refer to the original documentation and data.

ja07 ASPECTS OF JOBS: WORK INDEPENDENTLY

1980, 1982 (split 1), 1991, 1992, 2000:

On these cards there are various aspects of the world of work and careers. How important to you personally are these job characteristics?

For your answers, please use the scale from 1 to 7.

(Int.: Shuffle card pack and hand over cards individually, one by one, and let respondent choose an answer. Record one answer code for each card.)

2010 (card deck):

On these cards there are various aspects of the world of work and careers. How important to you personally are these job characteristics?

(Int.: Show any card to explain the answer scale:)

On the right hand side of each of these cards is a scale with 7 categories. The category at the bottom with the number 1 means this sphere of life is unimportant to you.

Category number 7 at the very top means this sphere of life is very important to you.

You can use the numbers in between to differentiate your answers.

(Int.: Hand over cards individually.)

2010 (CAPI, computerized randomization):

I will now present you with various aspects of the world of work and careers. How important to you personally are these job characteristics?

(Int.: Present card.)

On this card there is a scale with 7 categories. The category at the bottom with the number 1 means this sphere of life is unimportant to you. Category number 7 at the very top means this sphere of life is very important to you.

You can use the numbers in between to differentiate your answers.

1 1 - unimportant

2 ..

3 ..

4 ..

5 ..

6 ..

7 7 - very important

Comment:

In 1982 this variable was surveyed as part of a split questionnaire (comp. splt82).

Note:

The questions concerning the importance of various job characteristics were asked in varying contexts and constellations in the original surveys:

- ALLBUS 1980 surveyed a list of 10 items (ja01 to ja10). The item sequence was randomized using shuffle cards.

- ALLBUS 1982 and ALLBUS 1991 surveyed an extended list comprising 13 items (ja01 to ja13). The item sequence was randomized using shuffle cards.

- ALLBUS 1992 and ALLBUS 2000 surveyed a subset of the extended list comprising 6 items (ja02, ja03, ja06, ja07, ja10 and ja11). The item sequence was randomized using shuffle cards.

- ALLBUS 2010 surveyed a list comprising 11 items (ja01 to ja11). A two-group split-ballot design was used to test different methods of randomizing the item sequence. In one split-half items were randomized using shuffle cards. In the other split-half the item sequence was randomized by the interview software. Variables ja01-ja11 contain the data for both split-halves. A corresponding split identifier has not been included in this data set. Users interested in the 2010 split-experiment are advised to refer to the original documentation and data.

In 1982 this variable was surveyed as part of a split questionnaire (comp. split82).

Note:

The questions concerning the importance of various job characteristics were asked in varying contexts and constellations in the original surveys:

- ALLBUS 1980 surveyed a list of 10 items (ja01 to ja10). The item sequence was randomized using shuffle cards.

- ALLBUS 1982 and ALLBUS 1991 surveyed an extended list comprising 13 items (ja01 to ja13). The item sequence was randomized using shuffle cards.

- ALLBUS 1992 and ALLBUS 2000 surveyed a subset of the extended list comprising 6 items (ja02, ja03, ja06, ja07, ja10 and ja11). The item sequence was randomized using shuffle cards.

- ALLBUS 2010 surveyed a list comprising 11 items (ja01 to ja11). A two-group split-ballot design was used to test different methods of randomizing the item sequence. In one split-half items were randomized using shuffle cards. In the other split-half the item sequence was randomized by the interview software. Variables ja01-ja11 contain the data for both split-halves. A corresponding split identifier has not been included in this data set. Users interested in the 2010 split-experiment are advised to refer to the original documentation and data.

Im02 WATCH TV: AVERAGE VIEWING TIME PER DAY

<If respondent watches TV>

Thinking about the days when you watch TV, how long on average do you watch TV on these days - I mean in hours and minutes?

1998:

(Int.: If a time span is given, please ask for the average viewing time per day. Note down in hours and minutes.)

-10 Respondent never watches TV (code 0 in Im01)

-9 No answer

-1 Not available 1980-1996, 2000-2002, 2006, 2010, 2012, 2016

Comment:

N-Valid: 12782

N-Missing: 51707

Minimum: 1

Maximum: 1380

Median: 120,00

Mean: 157,26

Standard deviation: 100,530

Derivation of data:

The question surveyed asked for a reply in hours and minutes (e.g.: 2h 30min). For this variable, the viewing time in minutes was calculated from the original data as follows:

Total viewing time = (hours x 60) + minutes

Im04 TV INTEREST: SHOWS, QUIZ PROGRAMS

1998, 2004:

<If respondent watches TV>

(Int.: Please shuffle card pack and give to respondent.)

I have some cards here listing various kinds of TV program. Please tell me how interested you are in each kind of program: very strongly, strongly, middling, very little or not at all.

(Int.: <1998:> Please circle one response category per item.)

2014:

<If respondent watches TV>

(Int.: Please display card.)

Now I'm going to name several television programmes.

Please tell me how interested you are in each kind of programme on this list: very strongly, strongly, middling, little or not at all?

hs01 RESPONDENT: HEALTH

2004, 2014 (split 1):

(Int.: Please display card.)

Now I would like to ask some questions about your health.

How would you describe your health in general?

(Int.: <2014:> Please make sure you are using the right card.)

2006-2012, 2016:

(Int.: Please display card.)

A question about your health:

How would you describe your health in general?

-11 2014: No participation in split 1 (code 2 in spl14_3)

-9 No answer

-1 Not available 1980-2002

1 <2004-2012: A> Very good

2 <2004-2012: B> Good

3 <2004-2012: C> Satisfactory

4 <2004-2012: D> Not that good

5 <2004-2012: E> Bad

Comment:

In 2014 this variable was surveyed as part of a split questionnaire (comp. spl14_3).

This split questionnaire was used to test an alternative answer scale for the question on health.

In addition to the question documented here, which uses a 5 point answer scale, the same question using a six point answer scale was fielded for one half of the respondents (comp. V226 in ZA5240).

ht01 LAST 3 MONTHS: SEEN MD FOR ACUTE ILLNESS

(Int.: Please display card.)

And now, if you think back on the past three months: for what reason or reasons have you seen a doctor in the past three months? Which items on this card apply to you? Please name the appropriate letter or letters.

(Int.: The question concerns visits to doctor's surgeries and out-patient treatments in clinics and casualty departments, but not examinations during an in-patient stay in a hospital or accompanying relatives or children to the doctor.)

(Int.: Multiple responses possible, unless 'not seen a doctor' selected.)

Because of an acute illness (e.g. flu, injury)

-50 Not seen a doctor

ht02 LAST 3 MONTHS:SEEN MD F. CHRONIC ILLNESS

(Int.: Please display card.)

And now, if you think back on the past three months: for what reason or reasons have you seen a doctor in the past three months? Which items on this card apply to you? Please name the appropriate letter or letters.

(Int.: The question concerns visits to doctor's surgeries and out-patient treatments in clinics and casualty departments, but not examinations during an in-patient stay in a hospital or accompanying relatives or children to the doctor.)

(Int.: Multiple responses possible, unless 'not seen a doctor' selected.)

Because of a chronic illness (e.g. diabetes, high blood pressure/hypertension, rheumatism)

-50 Not seen a doctor

hb02 NUMBER OF TOBACCO PRODUCTS PER DAY

2014:

<If respondent smokes.>

About how many cigarettes or other tobacco products do you smoke per day?

(Int.: Put down 0 for less than one cigarette per day.)

-32 Cannot be constructed

-10 Respondent doesn't smoke (code 2 in hb01)

-9 No answer

-1 Not available 1980-2002, 2006-2012, 2016

0 Less than 1 per day

Comment:

N-Valid: 1830

N-Missing: 62659

Minimum: 0

Maximum: 60

Median: 15,00

Mean: 14,40

Standard deviation: 8,824

Derivation of data:

In ALLBUS 2004 information on tobacco consumption was gathered using three separate questions for the options "cigarettes", "cigar/cigarillos" and "pipes" (comp. F106-F108 in ZA3762). For this cumulative data set, the 2004 data was recoded so that it could be merged with the data from the single question asked in ALLBUS 2014.

How the data was surveyed in ALLBUS 2004:

Filter question 1:

- "Do you smoke? – Yes / No" (hb01 in this data set / F104 in ZA3762)

Filter question 2:

- "What do you smoke? – A Cigarettes / B Cigars, cigarillos / C Pipe" (not included in this data set / F105 in ZA3762)

Up to 3 questions on tobacco consumption:

- "About how many cigarettes do you smoke per day?" (hb02 in this data set / F106 in ZA3762)

- "About how many cigars/cigarillos do you smoke per day?" (hb02 in this data set / F107 in ZA3762)

- "About how many pipes do you smoke per day?" (hb02 in this data set / F108 in ZA3762)

Derivation of data for the cumulative data set:

Variable hb02 contains the sum of valid answers to the three questions F106, F107 and F108 in ALLBUS 2004 if there is valid data for at least one of these three questions.

Variable hb02 is coded as -9 'No answer' if all three questions F106-F108 in ALLBUS 2004 are coded as 'No answer'.

Variable hb02 is coded as -10 'NAP: screened out' if all three questions F106-F108 in ALLBUS

2004 are coded as 'Not applicable'.

All other cases are coded as -32 'cannot be generated'.

Is01 OVERALL LIFE SATISFACTION

(Int.: Please present card)

And now another general question. How satisfied are you - all in all - with your life at the moment?

Please use this list to answer.

Maximum: 206

Median: 172,00

Mean: 171,92

Standard deviation: 9,298

In 2008 and 2012, this question was part of the ISSP-modules surveyed together with ALLBUS.

As a rule ISSP-questions are not included in this cumulative data set. However, because the question documented here has also been part of the ALLBUS-interview several times, the ISSP-data was included in this data set. Please note that, in contrast to the ALLBUS interview, the ISSP-modules are surveyed as self-completion questionnaires.

Derivation of data:

2012 (ISSP): Respondents' were asked to enter '0' for 'Don't know', this has been recoded to -8.

hs17 RESP.: BODY WEIGHT IN KILOGRAMS

2004, 2014:

What is your current weight in kilograms?

(Int.: If the respondent does not know his/her exact weight, please ask him/her to make an estimate that is as accurate as possible.)

2008:

Could you please tell me your...

weight?

(Int.: Please use the keyboard to enter information.)

2012:

What is your...

weight?

(Int.: Please enter.

If you don't know your height or your weight, please enter '0'.)

2012 (ISSP): Respondents' were asked to enter '0' for 'Don't know', this has been recoded to -8.

hs18 BODY-MASS-INDEX

Description of variable:

Body-Mass-Index (BMI)

-32 Cannot be generated

-13 2008, 2012: No participation in ISSP

-1 Not available 1980-2002, 2006, 2010, 2016

Comment:

N-Valid: 9487

N-Missing: 55003

Minimum: 13,86

Maximum: 62,50

Median: 25,2500

Mean: 25,9066

Standard deviation: 4,66832

In 2008 and 2012, this derived variable was part of the ISSP-modules surveyed together with ALLBUS. As a rule ISSP-data are not included in this cumulative data set. However, because the question documented here has also been part of the ALLBUS-interview several times, the ISSP-data was included in this data set. Please note that, in contrast to the ALLBUS interview, the ISSP-modules are surveyed as self-completion questionnaires.

Derivation of data:

The data in this variable was calculated based on the information in hs16 (body height) and hs17 (weight):

$BMI (hs18) = \text{weight in kg} (hs17) / (\text{body height in meters} (hs16) \times \text{body height in meters} (hs16))$

Results were rounded to two decimal places.

Variable hs18 was coded as -32 'cannot be generated' if there was no valid information for one or both of the variables hs16 (body height) and hs17 (weight).

Note:

Body-Mass-Index

The Body-Mass-Index (BMI) is used as a general guideline to evaluate human body weight in relation to height. It is defined as the weight of a person (in kg) divided by the square of the person's height (in m):

$BMI = \text{weight (kg)} / (\text{height (m)} \times \text{height (m)})$

As an individual-level indicator of health risks, BMI has some generally recognized shortcomings (comp. World Health Organization (2000), 8-9). It is, however, an established and widely used population-level measure in national and international public health reporting (for the German

context compare for example Arbeitsgemeinschaft der obersten Landesgesundheitsbehörden (2003), 376-379). In World Health Organization (2000) BMI is characterized as „the most useful, albeit crude population-level measure of obesity“ (9).

rd01 RESPONDENT: RELIGIOUS DENOMINATION

1980-1984:

What religion do you belong to?

1986-2002:

(Int.: Please present card.)

What religion do you belong to?

(Int.: <From 1988:> Only one choice possible.)

From 2004:

(Int.: Please present card.)

May I ask you what religion you belong to?

(Int.: Only one choice possible.)

-9 No answer

-7 Refused

1 The German Protestant church (excluding free churches)

2 A Protestant free church

3 The Roman Catholic church

4 Another Christian denomination

5 Another non-Christian denomination

6 No religious affiliation

Derivation of data:

This variable has been recoded so as to conform with the standardized ALLBUS coding. The sequence of answer categories shown in this documentation may therefore deviate from that actually used in the field.

rd05 PREVIOUS RELIGIOUS DENOMINATION

<If respondent previously belonged to a church or religion>

What church or religious community was this?

From 1992:

(Int.: Please present card. Only one answer possible.)

-10 Respondent currently belongs to a church or religion (code 1-5 in rd01), respondent never belonged to a church or religion (code 2 in rd04)

-9 No answer

-7 Refused

-1 Not available 1980, 1984-1991, 1994-1998, 2004-2010, 2014, 2016

1 The German Protestant Church (excluding free churches)

2 A Protestant free church

3 The Roman Catholic Church

4 Another Christian denomination <1982: - which one?>

5 Another non-Christian religion <1982: - which one?>

Derivation of data:

This variable has been recoded so as to conform with the standardized ALLBUS coding. For 1992 and 2000, the sequence of answer categories shown in this documentation therefore deviates from that actually used in the field.

rp03 FREQUENCY OF CHURCH ATTENDANCE AS CHILD

2002:

How often did you yourself attend a church service when you were aged 11 or 12?

(Int.: Please present card.)

2012 Split 1:

<If respondent belongs to a Christian religious community or does not belong to any religion>

And how often did you yourself go to church when you were 11 or 12?

(Int.: Please present card.)

2012 Split 2:

<If respondent belongs to a Christian religious community or does not belong to any religion>

How often did you yourself attend a church service when you were aged 11 or 12?

(Int.: Please present card.)

2012:

<If respondent belongs to a non-Christian religious community>

How often did you yourself go to church - or to the mosque, the synagogue or another place of worship - when you were aged 11 or 12?

(Int.: Please present card.)

-9 No answer

-1 Not available 1980-2000, 2004- 2010, 2014, 2016

1 More than once a week

2 Once a week

3 Between one and three times a month

4 Several times a year

5 Less often

6 Never

Comment:

In 2012 this variable was surveyed as part of a split questionnaire (comp. split12_3).

Derivation of data:

For 2012, this variable consolidates the data for three differently worded questions on church attendance (comp. V340, V341 and V342 in ZA4614).

rp04a HOW OFTEN DO YOU PRAY? (11-POINT SCALE)

1991, 2008:

Now thinking about the present, about how often do you pray?

(Int.: Please tick only one box.)

1994:

About how often do you pray?

(Int.: Please present card. Only one choice possible.)

-13 1991, 2008: No participation in ISSP

-9 No answer

-1 Not available 1980-1990, 1992, 1996-2006, 2010-2016

1 Never

2 Less than once a year

3 About once or twice a year

4 Several times a year

5 About once a month

6 2-3 times a month

7 Nearly every week

8 Every week

9 Several times a week

10 Once a day

11 Several times a day

Comment:

In 1991 and 2008, this question was part of the ISSP-modules surveyed together with ALLBUS.

As a rule ISSP-questions are not included in this cumulative data set. However, because the question documented here has also been part of the ALLBUS-interview several times, the ISSP-data was included in this data set. Please note that, in contrast to the ALLBUS interview, the ISSP-modules are surveyed as self-completion questionnaires.

rb01 GOD IS PERSONALLY CONCERNED WITH HUMANS

1992, 2002, 2012:

The next part of our interview deals with whether there is a higher reality one can believe in, beyond the world we live in.

(Int.: Please, present card.)

Using this scale, please tell me for each of the statements on this card to what extent you agree with it.

There is a God who personally concerns himself with every human being.

-9 No answer

-1 Not available 1980-1991, 1994-2000, 2004-2010, 2014, 2016

1 Completely agree

2 Tend to agree

3 Have no fixed opinion on this

4 Tend to disagree

5 Completely disagree

6 Have never thought about this

Note:

Cosmologies

The item battery on cosmologies (rb01-rb06) is part of the module 'Religion and World View'. Both the content of the item battery and the survey mode used to field the questions varied over time.

- The module 'Religion and World View' was first surveyed in ALLBUS 1982. The item battery on cosmologies contained a total of eight items. Only three of these original questions are part of this cumulative data set (rb02, rb04 and rb06), the rest has not been replicated in subsequent ALLBUS surveys. In 1982, this part of the survey was administered as a self-completion questionnaire.

- ALLBUS 1992 surveyed an updated version of the module 'Religion and Worldview'. The item battery on cosmologies now comprised six items (rb01 to rb06), three of which were replicated from the 1982 survey. The questions were administered by an interviewer using a paper questionnaire (PAPI).

- ALLBUS 2002 and ALLBUS 2012 replicated the 1992 module 'Religion and Worldview' with the six-item battery on cosmologies (rb01 to rb06). The questions were administered by an interviewer using an electronic questionnaire (CAPI).

rb02 THERE IS A GOD WHO WANTS TO BE GOD F. US

1982:

The next part of our interview deals with whether there is a higher reality one can believe in, beyond the world we live in.

(Int.: Please point to the opposite page.)

On this list there are some opinions in this regard. On the top of the page you will find the possible responses you can use to evaluate each of the opinions. As you can see, each of the responses is assigned a number.

Number 1 means: Completely agree

Number 2 means: Tend to agree

Number 3 means: Have no fixed opinion on this

Number 4 means: Tend to disagree

Number 5 means: Completely disagree

Number 6 means: Have never thought about this

For each of the opinions put down the number of the response which comes closest to your own view.

(Int.: Hand over pencil. Ask respondent to fill in the appropriate answer code on the opposite page.)

1992, 2002, 2012:

The next part of our interview deals with whether there is a higher reality one can believe in, beyond the world we live in.

(Int.: Please, present card.)

Using this scale, please tell me for each of the statements on this card to what extent you agree with it.

There is a God who wants to be God for us.

-9 No answer

1 Completely agree

2 Tend to agree

3 Have no fixed opinion on this

4 Tend to disagree

5 Completely disagree

6 Have never thought about this

Comment:

In 1982 this variable was surveyed as part of a split questionnaire (comp. spltt82).

Note:

Cosmologies

The item battery on cosmologies (rb01-rb06) is part of the module 'Religion and World View'.

Both the content of the item battery and the survey mode used to field the questions varied over

time.

- The module 'Religion and World View' was first surveyed in ALLBUS 1982. The item battery on cosmologies contained a total of eight items. Only three of these original questions are part of this cumulative data set (rb02, rb04 and rb06), the rest has not been replicated in subsequent ALLBUS surveys. In 1982, this part of the survey was administered as a self-completion questionnaire.

- ALLBUS 1992 surveyed an updated version of the module 'Religion and Worldview'. The item battery on cosmologies now comprised six items (rb01 to rb06), three of which were replicated from the 1982 survey. The questions were administered by an interviewer using a paper questionnaire (PAPI).

- ALLBUS 2002 and ALLBUS 2012 replicated the 1992 module 'Religion and Worldview' with the six-item battery on cosmologies (rb01 to rb06). The questions were administered by an interviewer using an electronic questionnaire (CAPI).

ra01 LIFE ONLY HAS MEANING BECAUSE OF GOD

1982:

Many people ask themselves what meaning life really has. On this page you can find some opinions about the meaning of life.

(Int.: Point again to the opposite page.)

For each of these opinions put down again the number of the response which comes closest to your own opinion.

Number 1 means: I fully agree with it

Number 2 means: I tend to agree with it

Number 3 means: Have no fixed opinion on this

Number 4 means: I don't agree very much with it

Number 5 means: I don't agree at all with it

Number 6 means: Have never thought about this

(Int.: Hand over pencil. Ask respondent to fill in the appropriate answer code on the opposite page.)

1992, 2002, 2012:

Many people ask themselves what meaning life really has. On this card you can find some opinions about the meaning of life.

(Int.: Please, present card.)

Using this scale, please tell me for each of the statements on this card to what extent you agree with it.

Life only has meaning for me because there is a God.

3 Have no fixed opinion on this

4 I don't agree very much with it

5 I don't agree at all with it

6 Have never thought about this

Comment:

In 1982 this variable was surveyed as part of a split questionnaire (comp. spltt82).

Note:

Meaning of life

The item battery on meaning of life (ra01-ra06) is part of the module 'Religion and World View'. Both the content of the item battery and the survey mode used to field the questions varied over time.

- The module 'Religion and World View' was first surveyed in ALLBUS 1982. The item battery on meaning of life contained a total of ten items. Only four of these original questions are part of this

cumulative data set (ra01, ra02, ra03 and ra05), the rest has not been replicated in subsequent ALLBUS surveys. In 1982, this part of the survey was administered as a self-completion questionnaire.

- ALLBUS 1992 surveyed an updated version of the module 'Religion and Worldview'. The item battery on meaning of life now comprised six items (ra01 to ra06), four of which were replicated from the 1982 survey. The questions were administered by an interviewer using a paper questionnaire (PAPI).

- ALLBUS 2002 and ALLBUS 2012 replicated the 1992 module 'Religion and Worldview' with the six-item battery on meaning of life (ra01 to ra06). The questions were administered by an interviewer using an electronic questionnaire (CAPI).

ra02 WHAT COMES AFTER MAKES LIFE MEANINGFUL

1982:

Many people ask themselves what meaning life really has. On this page you can find some opinions about the meaning of life.

(Int.: Point again to the opposite page.)

For each of these opinions put down again the number of the response which comes closest to your own opinion.

Number 1 means: I fully agree with it

Number 2 means: I tend to agree with it

Number 3 means: Have no fixed opinion on this

Number 4 means: I don't agree very much with it

Number 5 means: I don't agree at all with it

Number 6 means: Have never thought about this

(Int.: Hand over pencil. Ask respondent to fill in the appropriate answer code on the opposite page.)

1992, 2002, 2012:

Many people ask themselves what meaning life really has. On this card you can find some opinions about the meaning of life.

(Int.: Please, present card.)

Using this scale, please tell me for each of the statements on this card to what extent you agree with it.

Life has meaning because there is something after death.

rb07 SCALE OF RELIGIOUSNESS, RESPONDENT

Would you describe yourself as more religious or more not religious?

We have a scale for this.

Where would you place yourself on this scale?

1982, 1992, 2000 PAPI:

Please tick one of the boxes.

(Int.: Please hand over a pencil and the questionnaire. Respondent should tick the appropriate box himself/herself on the next page. Please make sure that the tick is placed inside the boxes.)

2000 CAPI, 2002, 2010, 2012:

(Int.: Please present card.)

Please choose one of the boxes and tell me the letter under this box.

(Int.: Ask for the appropriate letter and record it.)

-9 No answer

-1 Not available 1980, 1984-1991, 1994-1998, 2004-2008, 2014, 2016

1 (f) Not religious

2 (a) ..

3 (m) ..

4 (o) ..

5 (g) ..

6 (z) ..

7 (e) ..

8 (y) ..

9 (i) ..

10 (p) Religious

Comment:

In 1982 this variable was surveyed as part of a split questionnaire (comp. spl82).

Religious convictions have different meanings for people.

What about you? I am going to read you some statements.

Please indicate to what extent these apply to you or not.

(Int.: Please read statements aloud.)

In my opinion, one should stick to things one can understand rationally and leave everything else as it is.

-9 No answer

-1 Not available 1980-2000, 2004-2010, 2014, 2016

1 Applies completely

2 Tends to apply

3 Tends not to apply

4 Doesn't apply at all

rr02 MARRIED IN CHURCH OR RELIG. CEREMONY?

<1982, 1992: If respondent is married, widowed or divorced>

<2000: If respondent is married>

<2002: If respondent is married and living with spouse>

<2012: If respondent is married and belongs to a Christian religious community>

Did you get married in church?

(Int.: <2002, 2012:> The question refers to the current marriage.)

2012:

<If respondent is married and belongs to a non-Christian community>

Did you get married in church, or rather did you get married according to the laws of your religious community?

(Int.: This refers to the current marriage.)

-10 1982, 1992: respondent has never married (code 5 in mstat);

2000: respondent is widowed, divorced or has never married (code 3-5 in mstat);

2002: respondent is widowed, divorced, never married or separated from spouse (code 2-5 in mstat);

2012: respondent is not married (code 3-9 in mstat)

-9 No answer

-1 Not available 1980, 1984-1991, 1994-1998, 2004-2010, 2014, 2016

1 Yes

2 No

Derivation of data:

ALLBUS 2012 used two separate questions to ask respondents from Christian and non-Christian backgrounds whether they were married in a religious ceremony. For this cumulative data set, the data from these two questions (v275 and v276 in ZA4614) has been consolidated in this variable.

rr03 WOULD YOU HAVE A CHURCH WEDDING TODAY?

1982:

Suppose you were to marry today:

Would you get married in church or not?

1992:

<If respondent does not live with spouse and has a steady partner who is not employed full- or part-time>

Suppose you were to marry today:

Would you get married in church or not?

2002:

<If respondent has a steady partner>

Suppose you were to marry today:

Would you get married in church or not?

-10 1992: respondent is married and lives with spouse (code 1 in mstat), has no steady partner (code 2 in dp01), steady partner is employed full- or part-time (code 1, 2, 7 in pwork);

2002: respondent is married and lives with spouse (code 1 in mstat), has no steady partner (code 2 in dp01)

-9 No answer

-8 Don't know

-1 Not available 1980, 1984-1991, 1994-2000, 2004-2016

1 Yes, would marry in church

2 No, would not get married in church

Comment:

When analysing this data, please take into account that there have been considerable differences in the skip patterns for this question over the years.

va01 POLITICAL GOALS: MAINTAIN LAW AND ORDER

(Int.: Please present card and leave on display until the end of the question.)

In politics, too, one can't have everything at once. On this card, there are four goals which can be pursued in politics.

If you had to choose between these different goals, which one would seem to you personally to be the most important?

(Int.: Only one choice possible.)

And which goal would be the second most important to you?

(Int.: Only one choice possible.)

And which goal would be third?

(Int.: Only one choice possible.)

<Until 1998:>

(Int.: Tick remaining option as "fourth.")

<From 2000:>

And which goal would be fourth?

(Int.: Only one choice possible.)

To maintain law and order in this country

-32 Cannot be generated

- 1 Most important goal
- 2 Second most important goal
- 3 Third most important goal
- 4 Fourth most important goal

Derivation of data:

The coding of the data on Inglehart's political priorities in this data set has been used in the ALLBUS program since 1988. Earlier ALLBUS surveys used a different method of coding the data: In the original data for 1980 to 1986, the first variable recorded the respondent's pick for most important of the political goals in va01-v04. The following three variables then contained the second, third and fourth most important goal respectively. In 1980 and 1982 the fourth most important goal was assigned without asking.

For this cumulative data set, the data from 1980 to 1986 has been recoded in accordance with the survey practice as of 1988. When there was no valid answer to one or more of the questions, code -32 'cannot be generated' was assigned.

va04 POLIT.GOALS:PROTECT RIGHT OF FREE SPEECH

(Int.: Please present card and leave on display until the end of the question.)

In politics, too, one can't have everything at once. On this card, there are four goals which can be pursued in politics.

If you had to choose between these different goals, which one would seem to you personally to be the most important?

(Int.: Only one choice possible.)

And which goal would be the second most important to you?

(Int.: Only one choice possible.)

And which goal would be third?

(Int.: Only one choice possible.)

<Until 1998:>

(Int.: Tick remaining option as "fourth.")

<From 2000:>

And which goal would be fourth?

(Int.: Only one choice possible.)

To protect the right of freedom of speech.

-32 Cannot be generated

- 1 Most important goal
- 2 Second most important goal
- 3 Third most important goal
- 4 Fourth most important goal

Derivation of data:

The coding of the data on Inglehart's political priorities in this data set has been used in the ALLBUS program since 1988. Earlier ALLBUS surveys used a different method of coding the data: In the original data for 1980 to 1986, the first variable recorded the respondent's pick for most important of the political goals in va01-v04. The following three variables then contained the second, third and fourth most important goal respectively. In 1980 and 1982 the fourth most important goal was assigned without asking.

For this cumulative data set, the data from 1980 to 1986 has been recoded in accordance with the survey practice as of 1988. When there was no valid answer to one or more of the questions, code -32 'cannot be generated' was assigned.

ingle INGLEHART-INDEX

Description of variable:

Inglehart-Index

-32 Cannot be generated

1 Postmaterialist

2 Postmaterialist mixed-type

3 Materialist mixed-type

4 Materialist

Derivation of data:

The data of the Inglehart-Index has been constructed with reference to Robert Inglehart's work on 'materialist' and 'postmaterialist' value orientations (Inglehart 1971).

The categorization is based on the respondents' statements about their political priorities in va01 to va04. Respondents who rank 'maintaining law and order in this country' and 'fighting rising prices' as the two most important issues are classified as 'materialists'. Respondents who consider 'giving citizens more influence on government decisions' and 'protecting the right of free speech' as the two most important goals are categorized as 'postmaterialists'.

All other respondents show ambiguous priorities in terms of this index and are therefore classified as 'mixed types'. These 'mixed type'-categories can be constructed in a number of ways. In ingle two such 'mixed types' are differentiated. Respondents who rank a 'postmaterialist' item first and a 'materialist' item second are grouped into the category 'postmaterialist mixed type', while the reverse order of preferences is assigned to the 'materialist mixed type'.

Whenever data is missing for one of the two top political preferences, no valid category can be assigned. In this case, the code -32 'cannot be generated' is assigned.

For further information, compare:

Ronald Inglehart 1971: The Silent Revolution in Europe: Intergenerational Change in Post-Industrial Societies, in: American Political Science Review 65(4): 991-1017.

vi13 IMPORTANCE: ACHIEVEMENT IN JOB

(Int.: Please present card.)

Everybody has certain ideas that shape their life and behavior. If you think about what you actually want to achieve in your life: How important are the following things for you personally?

Using this scale, please tell me. Choose 1 on the scale if something is unimportant to you, and 7 if something is extremely important to you.

You can differentiate your answers using the numbers in between.

(Int.: Please read out statements.)

vm01 ABORTION: IF BABY HAS A SEVERE DEFECT

Please tell me whether in your opinion a woman should be permitted to have an abortion or not...

(Int.: Please read the statements aloud and tick answers.)

...if there is a strong chance of the baby being borne with a severe defect?

-11 1990, 200, 2012: No participation in split 1 (code 2 in spl90, spl00, spl12_1)

-9 No answer

-8 Don't know

-1 Not available 1980, 1984, 1988, 1991, 1994, 1998, 2002, 2004, 2008, 2010, 2014, 2016

1 Yes, should be permitted

2 No, should not be permitted

Comment:

In 1990, 2000 and 2012 this variable was surveyed as part of a split questionnaire (comp. spl90, spl00 and spl12_1).

In addition to this item battery, ALLBUS 2012 included a second, newly developed item battery with a more differentiated response scale giving respondents the option to qualify their support for abortion taking into account how far into the pregnancy the supposed abortion would take place (comp. v43-v50 in ZA4614). This new item battery has not been replicated yet and is therefore not included in this cumulated dataset.

vm06 ABORTION:UNMARR. MOTHER NO WISH TO MARRY

Please tell me whether in your opinion a woman should be permitted to have an abortion or not...

(Int.: Please read the statements aloud and tick answers.)

...if the woman is unmarried and doesn't want to marry the child's father?

-11 1990, 200, 2012: No participation in split 1 (code 2 in spltt90, spltt00, spltt12_1)

-9 No answer

-8 Don't know

-1 Not available 1980, 1984, 1988, 1991, 1994, 1998, 2002, 2004, 2008, 2010, 2014, 2016

1 Yes, should be permitted

2 No, should not be permitted

Comment:

In 1990, 2000 and 2012 this variable was surveyed as part of a split questionnaire (comp. spltt90, spltt00 and spltt12_1).

In addition to this item battery, ALLBUS 2012 included a second, newly developed item battery with a more differentiated response scale giving respondents the option to qualify their support for abortion taking into account how far into the pregnancy the supposed abortion would take place (comp. v43-v50 in ZA4614). This new item battery has not been replicated yet and is therefore not included in this cumulated dataset.

Ip03 LIFE IS GETTING WORSE FOR COMMON PEOPLE

Description of variable:

Anomia:

I'm going to read you some statements now. Please tell me after each one whether you have the same or a different opinion.

(Int.: <Until 1990:>Please present card and read the statements aloud.)

(Int.: <From 1991:> Please read out statements.)

No matter what some people say, life for ordinary people is getting worse rather than better.

-11 1990: No participation in split 1 (code 2 in spl90)

-9 No answer

-8 Don't know

-1 Not available 1980, 1984-1988, 1994, 1998, 2014

1 I agree

2 I disagree

Comment:

In 1990 this variable was surveyed as part of a split questionnaire (comp. spl90).

ca15 PROHIBIT BY LAW: HIT DISOBEDIENT CHILD

1990:

And what is your opinion concerning the following types of behaviour?

(Int.: Please present card. Shuffle card pack and hand over cards individually.)

2000:

The next question again deals with some of the types of behaviour described in the previous question. If it was up to you, should these types of behaviour be prohibited by law or should they not be prohibited by law?

(Int.: Please present card. Shuffle card pack and hand over cards individually.)

A man hits his ten-year-old child because she/he was disobedient.

age	RESPONDENT: AGE
	Description of variable:
	Age of respondent
	-32 Cannot be generated
	Comment:
	N-Valid: 64386
	N-Missing: 104
	Minimum: 18
	Maximum: 102
	Median: 46,00
	Mean: 46,81
	Standard deviation: 17,252
	Derivation of data:
	Basic rules for calculating age
	Age calculation for all ALLBUS surveys followed these basic steps: First, age was calculated by subtracting the year of birth (yborn) from the year of survey (year). Next, month of the interview (xt02) and month of birth (mborn) were compared. If the month of the interview preceded the month of the respondent's birthday, the previously calculated age was reduced by 1. When there was no valid information on either the month of birth or the month of the interview, no further adjustment of the previously calculated age was made. When there was no valid information on the year of birth, age was assigned the code -32 "cannot be generated".
	Additional heuristics
	For the 1982 data the following heuristic was additionally applied when there was no valid information on the month of birth: Because data collection had been completed in May of 1982, it was more likely that the respondent had turned one year older after the interview than before the interview. Therefore, the age calculated from the year of survey and the year of birth was reduced by 1 on the assumption that the interview had taken place before the respondent's birthday.
	For the 1984 data it was possible to calculate the respondent's actual age at the time of the interview based on the date of the interview and the exact date of birth. If there was only incomplete data for the date of birth, age was calculated using the basic rules outlined above.
	For the 1986 and 1990 data, the following heuristic was additionally applied when there was no valid information on the month of the interview: When the respondent's month of birth came after the last month of fieldwork, it could be assumed that the respondent had not yet turned one year older and the age calculated from year of birth and year of survey was reduced by 1.
	In 1991 no information on the date of the interview was available. Therefore, the following heuristic was applied to calculate age: The middle of the fieldwork phase, i.e. the month of June, was set as the default value for the month of the interview. Age was then calculated using the basic rules

outlined above.

For the 1998-2004 data, the following heuristic was additionally applied when the month of the interview was the same as the respondent's month of birth: If the interview had taken place between the first and the fifteenth day of the month, it was assumed that the respondent had been interviewed before his or her birthday and the age calculated from year of birth and year of survey was reduced by 1.

german GERMAN CITIZENSHIP?

Description of variable:

German citizenship?

-32 Cannot be generated

1 Yes, respondent has German citizenship <codes 1 and 2 in ZA4588>

2 No, respondent does not have German citizenship <code 3 in ZA4588>

Derivation of data:

The data in this variable was constructed using the information on the respondents' citizenships in dn01-dn03 in the unabridged data set. To meet the data protection requirements for ALLBUS/GGSScompact the data in this variable was subsequently coarsened. The full range of data on citizenships (german, dn01-dn03) is available in the scientific use file ALLBUS/GGSS 1980-2016 (Study No. 4588).

Cases for which there was no data on citizenships in dn01-dn03 (either code -33 'Cannot be coded' or code -9 'No answer') were coded as -32 'Cannot be generated' in this variable.

educ RESP: GENERAL SCHOOL LEAVING CERTIFICATE

Until 1984:

What general school leaving certificate do you have?

(Int.: Please read out answers. Request highest school leaving certificate only.)

From 1986:

(Int.: Please present card.)

What general school leaving certificate do you have?

(Int.: Only one choice possible. Request highest school leaving certificate only.)

-41 Data error

-9 No answer

1 <Until 1984:> None of these

<From 1986:> Finished school without school leaving certificate

<1991 East:> Finished school without school leaving certificate, did not finish 8th grade

2 Lowest formal qualification of Germany's tripartite secondary school system, after 8 or 9 years of schooling

<Until 1991: Volks-/ Hauptschulabschluß

1991 East: Volksschulabschluß, Polytechnische Oberschule mit Abschluß 8. Klasse

from 1992: Volks-/ Hauptschulabschluß bzw. Polytechnische Oberschule mit Abschluß 8. oder 9. Klasse>

3 Intermediary secondary qualification, after 10 years of schooling

<1991 East: Polytechnische Oberschule mit Abschluß 10. Klasse

from 1992: Mittlere Reife, Realschulabschluß bzw. Polytechnische Oberschule mit Abschluß 10. Klasse

until 1991: Mittlere Reife, Realschulabschluß (Fachschulreife)>

4 Certificate qualifying for studies at a University of Applied Sciences

<Fachhochschulreife (Abschluß einer Fachoberschule, etc.)

1991 East: Fachabitur>

5 Certificate qualifying for studies at university level

<Until 1991: Abitur (Hochschulreife)

1991 East: Abitur, Erweiterte Oberschule mit Abschluß 12. Klasse (Hochschulreife)

from 1992: Abitur bzw. Erweiterte Oberschule mit Abschluß 12. Klasse (Hochschulreife)>

6 Other school leaving certificate

<From 1986: Anderen Schulabschluß

1991 West: Anderen Schulabschluß (auch in der ehemaligen DDR oder im Ausland erworbener Abschluß)

1991 East: Anderen Schulabschluß (auch in den alten Bundesländern oder im Ausland erworbener Abschluß)>

7 <From 1986:> Still at school

Comment:

This variable has been recoded so as to conform with the standardized ALLBUS coding. The sequence of answer categories shown in this documentation may therefore deviate from that actually used in the field.

de01 RESPONDENT: OCCUPATIONAL TRAINING

Until 1984:

What occupational training did you complete?

(Int.: Please present card. Ask for last qualification only.)

From 1986 (highest qualification reconstructed from multiple choice question):

What vocational or professional training do you have?

Which of the categories on the card apply to you?

Please name the appropriate letter(s).

(Int.: Please present card. Multiple responses possible.)

-32 Cannot be generated

-9 No answer

-7 Refused

1 No completed vocational training <1980-1984: (including vocational school without apprenticeship); includes: still at school>

2 <From 1986:> On-the-job vocational training with final certificate
<Beruflich-betriebliche Anlernzeit mit Abschlusszeugnis>

3 Work placement, internship
<Berufliches Praktikum, Volontariat>

4 <From 1991:> Compact vocational training course
<Teilfacharbeiterabschluss>

5 Completed trades, crafts or agricultural apprenticeship
<Abgeschlossene gewerbliche oder landwirtschaftliche Lehre>

6 Completed commercial apprenticeship
<Abgeschlossene kaufmännische Lehre>

7 Specialized vocational college certificate <Berufsfachschulabschluss>

8 <From 1991:> Technical or vocational college certificate
<Fachschulabschluss>

9 Master (craftsman), technician or equivalent college certificate
<Meister-, Techniker- oder gleichwertiger Fachschulabschluss>

10 University of Applied Sciences degree (or engineering college degree)
<Fachhochschulabschluß (auch Ingenieurschulabschluß)>

11 University degree
<Hochschulabschluss>

50 <From 1986:> Other vocational training certificate <1991 West: also one you received in the ex-GDR or in another country; 1991 East: also one you received in the old federal states or in another country>

Derivation of data:

Since 1980, the way data on vocational training has been collected in the ALLBUS program has been adapted repeatedly. Over time, both multiple response and single answer questions have been fielded and the range of answer options has been extended to include qualifications from the former GDR. The data in variable de01 has been constructed so as to consolidate all available data on the vocational training of the respondent. For a comprehensive description of the original data as well as the construction of the consolidated data please refer to 'Appendix B' of the Variable Report.

de07 RESP.:COMPACT VOCATIONAL TRAINING COURSE

From 1991:

<If respondent has finished school>

What vocational or professional training do you have?

Which of the categories on the card apply to you?

Please name the appropriate letter(s).

(Int.: Please present card. Multiple responses possible unless 'no completed vocational training' selected>.)

Compact vocational training course

<Teilfacharbeiterabschluss>

-10 Respondent is still at school (code 7 in educ); 1991 also: respondent lives in the old federal states (code 1 in eastwest)

-9 No answer

-1 Not available 1980-1990

0 Not selected

1 Selected

Derivation of data:

Since 1980, the way data on vocational training has been collected in the ALLBUS program has been adapted repeatedly. Over time, both multiple response and single answer questions have been fielded and the range of answer options has been extended to include qualifications from the former GDR. The data in variables de05-de16 has been constructed so as to consolidate all available data on the vocational training of the respondent. For a comprehensive description of the original data as well as the construction of the consolidated data please refer to 'Appendix B' of the Variable Report.

de13 R: MASTER,TECHNICIAN COLLEGE CERTIFICATE

1980-1984 (data reconstructed from single response question):

What occupational training did you complete?

(Int.: Please present card. Ask for last qualification only.)

From 1986:

<If respondent has finished school (1986: and is neither in vocational training nor attending university) >

What vocational or professional training do you have?

Which of the categories on the card apply to you?

Please name the appropriate letter(s).

(Int.: Please present card. Multiple responses possible <from 1990: unless 'no completed vocational training' selected>.)

Master (craftsman), technician or equivalent college certificate

<Meister-, Techniker- oder gleichwertiger Fachschulabschluss>

-32 Cannot be generated

-10 From 1986: Respondent is still at school (code 7 in educ); 1986 also: respondent is still in training

-9 No answer

0 Not selected

1 Selected

Derivation of data:

Since 1980, the way data on vocational training has been collected in the ALLBUS program has been adapted repeatedly. Over time, both multiple response and single answer questions have been fielded and the range of answer options has been extended to include qualifications from the former GDR. The data in variables de05-de16 has been constructed so as to consolidate all available data on the vocational training of the respondent. For a comprehensive description of the original data as well as the construction of the consolidated data please refer to 'Appendix B' of the Variable Report.

iscd975 RESP.: ISCED 1997 - 5 LEVELS

Description of variable:

International Standard Classification of Education (ISCED) 1997, 5 levels - respondent

-32 Cannot be generated

- 1 Level 1 - Primary education or first stage of basic education
- 2 Level 2 - Lower secondary or second stage of basic education
- 3 Level 3 - (Upper) secondary education
- 4 Level 4 - Post-secondary non-tertiary education
- 5 Level 5 - First stage of tertiary education

Derivation of data:

The data in this variable was constructed based on the combination of data on the general school leaving certificate (educ) and on vocational or professional training (de01, de05-de16).

Rule 1

When there is valid data on both the general school leaving certificate and on vocational or professional training, the case is classified according to the combination of the two qualifications.

When the information on the general school leaving certificate is ambiguous ('other school leaving certificate'), the person is assumed to have the equivalent of a basic or intermediary secondary qualification ("Haupt- oder Realschulabschluss").

When the information on vocational or professional training is ambiguous ('other vocational training certificate'), the person is assumed to have the equivalent of a basic or intermediary qualification (e.g. completed apprenticeship).

Rule 2

When there is valid data on the general school leaving certificate but no valid data on vocational or professional training or when the person has no vocational or professional training, the case is classified according to the school leaving certificate.

Rule 3

When there is valid data on vocational or professional training but no valid data on the general school leaving certificate, it is assumed that the person has the minimal school qualification necessary to obtain the vocational or professional qualification and the case is classified according to this combination of qualifications.

Rule 4

When there is neither valid data on the general school leaving certificate nor on vocational or professional training, the case is coded as -32 'cannot be generated'.

When the person is still at school according to the data on the general school leaving certificate, the case is also coded as -32 'cannot be generated'.

Note:

International Standard Classification of Education (ISCED) 1997

The International Standard Classification of Education (ISCED) 1997 was developed by UNESCO as an internationally comparable classification of education levels. It provides a framework for the description of educational programs that can be applied regardless of the structure of national

education systems and a set of rules for assigning educational programs to a taxonomy of educational attainment (UNESCO 2006: 7). The characteristics used to classify educational programs include, for example, the field and type of education, the age at which a program is typically attended, the entrance qualification needed to participate in a program or the type of education it gives access to (UNESCO 2006: 19). ISCED 1997 is designed to encompass all forms of organized learning, i.e. it equally covers vocational and academic education (UNESCO 2006: 10).

ISCED 1997 distinguishes seven levels of education (UNESCO 2006: 19):

Level 0 - Pre-primary education

Level 1 - Primary education or first stage of basic education

Level 2 - Lower secondary or second stage of basic education

Level 3 - (Upper) secondary education

Level 4 - Post-secondary non-tertiary education

Level 5 - First stage of tertiary education

Level 6 - Second stage of tertiary education

Using survey data, ISCED 1997 can be operationalized for the German educational system as the combination of the attributes general school leaving certificate and highest vocational qualification (Hoffmeyer-Zlotnik et al. 2010: 77). The implementation of ISCED 1997 for ALLBUS is modelled on the practice documented for the German microcensus (comp. Schroedter et al. 2006: 22) and the similar rules laid out in Hoffmeyer-Zlotnik et al. 2010 (76). There are, however, a number of factors that limit the full implementation of ISCED 1997 with ALLBUS data. On the one hand, these limitations are due to the universe sampled for ALLBUS. The ALLBUS sample only includes adult respondents, i.e. persons who are 18 or older. Consequently, ISCED Level 0 'Pre-primary education' cannot be covered with ALLBUS data. On the other hand, there are limitations related to the type and scope of data surveyed. Firstly, this is the case for respondents who are still at school. These respondents cannot be assigned an ISCED level based on the type of school they attend, because this information is not available. Secondly, the ALLBUS-implementation of ISCED 1997 does not include a further differentiation of levels 3 and 5 (Schroedter et al. 2006: 22), because the data on vocational qualifications is not specific enough to accurately distinguish the proposed subcategories in all cases. And finally, ALLBUS does not distinguish between ISCED Level 5 "First Stage of Tertiary Education" and ISCED Level 6 – "Second Stage of Tertiary Education", because information on the type of university degree is only available for the latest cross-section surveys. Instead, all respondents with university degrees are classified at Level 5.

Mapping of qualifications to ISCED 1997 Levels:

Level 0 - Pre-primary education (not covered by ALLBUS)

Level 1: Primary education or first stage of basic education

Respondents who indicate that they did not finish school and have not obtained a vocational qualification are classified at ISCED Level 1. Also classified at ISCED Level 1 are respondents who indicate that they did not finish school and who did not give a valid answer to the question on occupational qualifications.

Level 2: Lower Secondary Education

Respondents who have a lower or intermediary school qualification ("Haupt- oder Realschulabschluss") and no vocational qualification or only an informal vocational qualification ('on the job training' or 'work placement/internship') are classified at ISCED Level 2.

Level 3: Upper Secondary Education

Respondents who have an entrance qualification for tertiary education ("Fachhochschulreife oder Abitur") and no vocational qualification or only an informal vocational qualification (on the job training or work placement/internship) are classified at ISCED-Level 3. Also classified at ISCED-Level 3 are respondents who have a lower or intermediary school qualification ("Haupt- oder Realschulabschluss") and additionally finished a vocational training program ("Lehre, Teilfacharbeiter- oder Berufsfachschulabschluss").

Level 4: Post Secondary Education

ISCED-Level 4 marks a level of educational attainment that goes beyond secondary education but does not satisfy the standards of tertiary education. This category includes respondents who have an entrance qualification for tertiary education and also finished a vocational training program (e.g. a traineeship program).

Level 5: Tertiary Education

Respondents who have a technical college or vocational college degree, master craftsmen or respondents with equivalent degrees, and respondents who have a university degree are classified at ISCED-Level 5.

Level 6: Second Stage of Tertiary Education (not implemented for ALLBUS)

ISCED-Level 6 would be reserved for respondents who have a research degree (e.g. a doctoral degree).

iscd11 RESP.: ISCED 2011

Description of variable:

International Standard Classification of Education (ISCED) 2011 - respondent

-32 Cannot be generated

-1 Not available 1980-2010

1 Level 1 - Primary education

2 Level 2 - Lower secondary education

3 Level 3 - Upper secondary education

4 Level 4 - Post secondary non-tertiary education

5 Level 5 - Short-cycle tertiary education

6 Level 6 - Bachelor's or equivalent level

7 Level 7 - Master's or equivalent level

8 Level 8 - Doctoral or equivalent level

Derivation of data:

The data in this variable was constructed based on the combination of data on the general school leaving certificate (educ) and on vocational or professional training (de01-de18).

Rule 1

When there is valid data on both the general school leaving certificate and on vocational or professional training, the case is classified according to the combination of the two qualifications.

When the information on the general school leaving certificate is ambiguous ('other school leaving certificate'), the person is assumed to have the equivalent of a basic or intermediary secondary qualification ("Haupt- oder Realschulabschluss").

When the information on vocational or professional training is ambiguous ('other vocational training certificate'), the person is assumed to have the equivalent of a basic or intermediary qualification (e.g. completed apprenticeship).

Rule 2

When there is valid data on the general school leaving certificate but no valid data on vocational or professional training or when the person has no vocational or professional training, the case is classified according to the school leaving certificate.

Rule 3

When there is valid data on vocational or professional training but no valid data on the general school leaving certificate, it is assumed that the person has the minimal school qualification necessary to obtain the vocational or professional qualification and the case is classified according to this combination of qualifications.

Rule 4

When there is neither valid data on the general school leaving certificate nor on vocational or professional training, the case is coded as -32 'cannot be generated'.

When the person is still at school according to the data on the general school leaving certificate, the case is also coded as -32 'cannot be generated'.

Note:

International Standard Classification of Education (ISCED) 2011

The International Standard Classification of Education (ISCED) 2011 is an improved version of ISCED 1997, which was developed by UNESCO as an internationally comparable classification of education levels. Like its predecessor, ISCED 2011 provides a framework for the description of educational programs that can be applied regardless of the structure of national education systems and a set of rules for assigning educational programs to a taxonomy of educational attainment (UNESCO 2012: 6). The characteristics used to classify educational programs include, for example, the field and type of education, the age at which a program is typically attended, the entrance qualification needed to participate in a program or the type of education it gives access to (comp. Section 9 in UNESCO 2012). ISCED 1997 is designed to encompass all forms of organized learning, i.e. it equally covers vocational and academic education. For ISCED 2011, terms and definitions were updated and the rules of classification were revised. Moreover, the classification was extended to cover early childhood education and to provide a more differentiated classification of tertiary education (UNESCO 2012: 62-68).

ISCED 2011 has "parallel coding schemes for education programmes (ISCED Programmes or ISCED-P) and levels of educational attainment (ISCED Attainment or ISCED-A)" which define nine general educational levels (UNESCO 2012: 21).

ISCED-A Level 0 – Less than primary education

ISCED-A Level 1 - Primary education

ISCED-A Level 2 - Lower secondary education

ISCED-A Level 3 - Upper secondary education

ISCED-A Level 4 - Post-secondary non-tertiary education

ISCED-A Level 5 – Short-cycle tertiary education

ISCED-A Level 6 – Bachelor's or equivalent level

ISCED-A Level 7 – Master's or equivalent level

ISCED-A Level 8 – Doctoral or equivalent level

Using survey data, ISCED can be operationalized for the German educational system as the combination of the attributes general school leaving certificate and highest vocational qualification (Hoffmeyer-Zlotnik et al. 2010: 77). There are, however, a number of factors that limit the full implementation of ISCED 2011 with ALLBUS data. Because there is only insufficient data on tertiary education, ISCED 2011 has not been constructed for ALLBUS 1980-2008. Moreover, the ALLBUS sample only includes adult respondents, i.e. persons who are 18 or older. Consequently, ISCED Level 0 'Pre-primary education' is not covered by ALLBUS data. Finally, ALLBUS only implements the highest level of the ISCED 2011 classification. Information of the type needed to form classes on second- and third-digit level (comp. UNESCO 2012: 21f.) is not part of the ALLBUS data.

The implementation of ISCED 2011 could for the most part follow the established practice for ISCED 1997 (comp. Schroedter et al. 2006; Hoffmeyer-Zlotnik et al. 2010). New mappings of qualifications to ISCED levels were only necessary for the area of tertiary education.

Mapping of qualifications to ISCED-A levels

Level 0 – Less than primary education
(not covered by ALLBUS)

Level 1: Primary education

Respondents who indicate that they did not finish school and have not obtained a vocational qualification are classified at ISCED Level 1. Also classified at ISCED Level 1 are respondents who indicate that they did not finish school and who did not give a valid answer to the question on occupational qualifications.

Level 2: Lower secondary education

Respondents who have a lower or intermediary school qualification ("Haupt- oder Realschulabschluss") and no vocational qualification or only an informal vocational qualification ('on the job training' or 'work placement/internship') are classified at ISCED Level 2.

Level 3: Upper secondary education

Respondents who have an entrance qualification for tertiary education ("Fachhochschulreife oder Abitur") and no vocational qualification or only an informal vocational qualification (on the job training or work placement/internship) are classified at ISCED-Level 3. Also classified at ISCED-Level 3 are respondents who have a lower or intermediary school qualification ("Haupt- oder Realschulabschluss") and additionally finished a vocational training program ("Lehre, Teilfacharbeiter- oder Berufsfachschulabschluss).

Level 4: Post-secondary non-tertiary education

ISCED-Level 4 marks a level of educational attainment that goes beyond secondary education but does not satisfy the standards of tertiary education. This category includes respondents who have an entrance qualification for tertiary education and also finished a vocational training program (e.g. a traineeship program).

Level 5: Short-cycle tertiary education

Respondents who have a technical college or vocational college degree, master craftsmen and respondents with equivalent degrees are classified at ISCED-Level 4.

Level 6: Bachelor's or equivalent level

Respondents who have a bachelor's degree or an unspecified university degree are classified at ISCED-Level 6.

Level 7: Master's or equivalent level

Respondents who have a master's degree or an equivalent degree ("Magister", "Diplom" or "Staatsexamen") are classified at ISCED-Level 7.

Level 8: Doctoral or equivalent level

Respondents who have a research degree (e.g. a doctoral degree) are classified at ISCED-Level 8.

work RESPONDENT: CURRENT EMPLOYMENT STATUS

(Int.: Please present card.)

And now let's continue with employment and your occupation. Which of the categories on the card applies to you?

(Int.: Please present card. Only one choice possible.)

1991 East:

(Int.: If there are questions: Employees with contracts on hold should choose an answer corresponding to the number of working hours agreed in their contracts.)

From 2000:

(Int.: Since this is an important question, please try to elicit an answer.

If there are difficulties referring to the classification, here are some pointers for you:

Trainees are considered employees in a regular occupation <full-time or part-time employment>.

FAMILY MEMBERS ASSISTING IN A FAMILY BUSINESS who are full-time or part-time <"half-time"> employees in the business of a household or a family member without having a formal contract are considered employees in a regular occupation (either full-time or part-time).

Employed LESS THAN PART <"HALF"> TIME are persons who are gainfully employed while, at the same time, one of the following applies:

- they attend a FULL-TIME SCHOOL (pupils and students),
- they are registered as UNEMPLOYED or
- they draw a RETIREMENT BENEFIT/PENSION as a result of previous employment.

Persons on PARENTAL LEAVE (excluding those who nevertheless work part-time) or on ANOTHER TYPE OF LEAVE OF ABSENCE are considered not working.)

-9 No answer

1 Full-time employment

2 Part- <"half-"> time employment

3 Less than part- <"half-"> time employment

4 <1980, from 1986:> Not working

5 <Until 1988:> Unemployed

6 <Until 1988:> Military/alternative community service

7 <1982, 1984:> housewife/househusband, not working

8 <1982, 1984:> Retired

10 <1982, 1984:> At school, university, in training

11 <1982, 1984:> Not working for other reasons

12 <1991-1994:> Working short-time <1991 only for respondents from the new federal states>

dw01 RESPONDENT: CURRENT OCCUPATION

1988-1992:

<If respondent is employed full- or part-time>

What is your current occupational position?

Please have a look at these cards, choose the appropriate card and tell me the answer code on the card.

(Int.: Hand over card pack. Only one choice possible. Leave chosen card on table and put other cards to the side.)

-10 Not employed full- or part-time (until 1986: code 3-5, 7-11 in work; from 1988: code 3-6 in work)

-9 No answer

-7 Refused

1 Independent farmer

2 Independent professional

3 Self-employed in trade or craft, industry, service sector, etc.

4 Civil servants/judges/professional soldiers, <until 1986 also:> Military/alternative community service

5 Employees

6 Workers

7 In vocational training

8 Family member assisting in family business

9 <From 1991:> Farmer on a cooperative farm <1991: only for respondents from the new federal states>

Derivation of data:

The data in this variable was directly surveyed only between 1988 and 1992. For all other years this variable groups the data in dw02.

tps68 R.: CURRENT TREIMANPRESTIGE ISCO-68

Description of variable:

Classification of occupation (ISCO 1968) according to the occupational prestige scale

-34 Not included 2012-2016

-32 Treimanprestige cannot be generated from ISCO-code, ISCO cannot be coded (code -33 in isco68)

-10 Respondent not employed full- or part-time (code 3-11 in work)

Comment:

N-Valid: 27331

N-Missing: 37158

Minimum: 18,0

Maximum: 78,9

Median: 41,500

Mean: 42,678

Standard deviation: 12,1405

Derivation of data:

Occupational Prestige Scale

The occupational prestige scale is based on the ISCO-68 classification of occupations.

The prestige scores in this scale were derived from the results of empirical social research in various countries. Respondents in all participating countries were asked to evaluate a number of occupations according to relative prestige and social status. Based on these evaluations a scale of prestige scores with hypothetical extreme values of 0 and 100 was then created.

In general, respondents were assigned prestige scores according to the three digit ISCO-68 code of their occupation. When an appropriate ISCO code could not be determined, prestige scores were assigned according to the occupational minor group. When no appropriate occupational minor group could be determined, the mean prestige score of the occupational major group was assigned.

For further information on the prestige scale, compare:

Donald J. Treiman 1977: Occupational Prestige in Comparative Perspective, New York: Academic Press.

(In particular: Appendix A: Standard International Occupational Prestige)

mps68 R.: CURRENT MAGNITUDEPRESTIGE ISCO-68

Description of variable:

Classification of occupation (ISCO 1968) according to the Magnitude-Prestigeskala (MPS)

-34 Not included 2012-2016

-32 MPS cannot be generated from ISCO-code, ISCO cannot be coded (code -33 in isco68)

-10 Respondent not employed full- or part-time (code 3-11 in work)

Comment:

N-Valid: 27331

N-Missing: 37158

Minimum: 20,0

Maximum: 186,8

Median: 54,800

Mean: 63,493

Standard deviation: 29,1887

Derivation of data:

Magnitudeprestige Scale (MPS) for ISCO-68 and ISCO-88

The Magnitudeprestige Scale was designed by Bernd Wegener specifically for the context of the Federal Republic of Germany. In contrast to Treiman's scale, which is based on verbal evaluations of relative social prestige, Wegener's scale is based on a psycho-physical method of measurement. Wegener asked respondents to give implicit ratio estimations of the relative magnitude of social prestige for a sample set of occupations. From these ratio estimations, Wegener then calculated a general scale of ordinal prestige scores. This MPS-scale describes a gradual mapping of social closure.

For further information, compare:

Bernd Wegener 1984: Gibt es Sozialprestige? Konstruktion und Validität der Magnitude-Prestigeskala, ZUMA Arbeitsbericht 84/02.

Bernd Wegener 1985: Gibt es Sozialprestige?, in: Zeitschrift für Soziologie 14: 209-235.

isei68 R.: CURRENT OCCUPATION, ISEI ISCO-68

Description of variable:

Classification of occupation (ISCO 1968) according to the International Socio-Economic Index of Occupational Status (ISEI)

-34 Not included 1980-1998, 2012-2016

-32 ISEI cannot be generated from ISCO-code, , ISCO cannot be coded (code -33 in isco68)

-10 Respondent not employed full-or part-time (code 3-11 in work)

Comment:

N-Valid: 7865

N-Missing: 56624

Minimum: 16

Maximum: 90

Median: 45,00

Mean: 47,84

Standard deviation: 15,806

Derivation of data:

International Socio-Economic Index of Occupational Status (ISEI) for ISCO-68

In contrast to social prestige scales based on subjective evaluations of the relative social esteem of occupations, this index of socio-economic status was constructed using empirical data on the level of education and income related to a given occupation. The index scores were calculated for occupations coded according to ISCO-68.

Cases for which there was no valid ISCO-68 code, could not be assigned an ISEI score. These cases were coded as 'cannot be generated' (code -32).

For further information, compare:

gld68 R.: CURR.OCCUP. GOLDTHORPE CLASS ISCO-68

Description of variable:

Goldthorpe class scheme:

Derived from information on respondent's current occupation

-34 Not included 2012-2016

-32 Insufficient occupational information for classification in class scheme

-10 Respondent not employed full- or part-time (code 3-11 in work)

1 Higher and middle grades of the service class (higher grade professionals, administrators, officials and managers, large proprietors)

2 Lower grades of the service class

3 Non-manual employees with routine tasks (mainly clerical occupations, also sales occupations)

4 Proprietors, artisans etc. with 2-49 employees

5 Small proprietors, artisans etc. with 1 or no employees

6 Farmers (self-employed)

7 Technicians, supervisors of manual workers (foremen, master craftsmen)

8 Skilled workers

9 Unskilled and semi-skilled workers

10 Agricultural workers

11 Subdivision of class 3: Occupations without attachment to an organisational hierarchy and infrastructure. (This category was added when the class scheme was adapted to include women.)

12 <From 1991:> Farmer on a cooperative farm <"Genossenschaftsbauer," 1991 only for respondents from the new federal states>

Derivation of data:

This classification was constructed using the information in dw02 and isco68.

Note:

The Goldthorpe Class Scheme

The class scheme by Goldthorpe groups individuals on the basis of their occupation (ISCO-68) and their occupational position (reference number). By combining these two variables, 12 different class categories are constituted.

For further information, compare:

siops88 R.: CURRENT OCCUPATION, SIOPS ISCO-88

Description of variable:

Classification of occupation (ISCO 1988) according to the Standard International Occupational Prestige Scale (SIOPS)

-34 Not included 1980-1998

-32 SIOPS cannot be generated from ISCO-code, ISCO cannot be coded (code -33 in isco88)

-10 Respondent not employed full- or part-time (code 3-4 in work)

Comment:

N-Valid: 14832

N-Missing: 49657

Minimum: 13

Maximum: 78

Median: 44,00

Mean: 43,67

Standard deviation: 12,412

Derivation of data:

Standard International Occupational Prestige Scale (SIOPS) for ISCO-88

The "Standard International Occupational Prestige Scale" is based on ISCO-88. It was conceived as an alternative prestige measure to Treiman's occupational prestige scale, which is based on ISCO-68.

Please be advised that there are as yet no SIOPS-scores for the incomplete codes and the general categories of ISCO-88. These cases were coded as -32 'cannot be generated'

For further information, compare:

Ganzeboom, Harry B. G. und Donald J. Treiman 1996: Internationally Comparable Measures of Occupational Status for the 1988 International Standard Classification of Occupations, in: Social Science Research 25(3): 201-239.

mps88 R.: CURRENT MAGNITUDEPRESTIGE ISCO-88

Description of variable:

Classification of occupation (ISCO 1988) according to the Magnitudeprestige Scale (MPS)

-34 Not included 1980-1991, 2012-2016

-32 MPS cannot be generated from ISCO-code, ISCO cannot be coded (code -33 in isco88)

-10 Respondent not employed full- or part-time (code 3, 4 in work)

Comment:

N-Valid: 15879

Maximum: 186,8

Median: 67,100

Mean: 75,437

Standard deviation: 33,8339

Derivation of data:

Magnitudeprestige Scale (MPS) for ISCO-68 and ISCO-88

The Magnitudeprestige Scale was designed by Bernd Wegener specifically for the context of the Federal Republic of Germany. In contrast to Treiman's scale, which is based on verbal evaluations of relative social prestige, Wegener's scale is based on a psycho-physical method of measurement. Wegener asked respondents to give implicit ratio estimations of the relative magnitude of social prestige for a sample set of occupations. From these ratio estimations, Wegener then calculated a general scale of ordinal prestige scores. This MPS-scale describes a gradual mapping of social closure.

For further information, compare:

Bernd Wegener 1984: Gibt es Sozialprestige? Konstruktion und Validität der Magnitude-Prestigeskala, ZUMA Arbeitsbericht 84/02.

Bernd Wegener 1985: Gibt es Sozialprestige?, in: Zeitschrift für Soziologie 14: 209-235.

isei88 R.: CURRENT OCCUPATION, ISEI ISCO-88

-32 SIOPS cannot be generated from ISCO-code, ISCO cannot be coded (code -33 in isco08)

-10 Respondent is not employed full- or part-time (code 3-4 in work)

Comment:

N-Valid: 3806

N-Missing: 60684

Minimum: 13,00

Maximum: 78,16

Median: 44,0100

Mean: 45,3902

Standard deviation: 12,89309

Derivation of data:

Standard International Occupational Prestige Scale (SIOPS) for ISCO-08

In order to generalize the "Standard International Occupational Prestige Scale" for ISCO-08, the original classification based on ISCO-88 was converted to ISCO-08 (Ganzeboom 2010). In contrast to ISEI, the construction of SIOPS is not based on a reference data set. Instead, the update to ISCO-08 is first and foremost an analytic operation. However, to generate SIOPS scores for aggregate ISCO-levels, weighting factors were needed. These weighting factors were constructed using the original set of data as described in Ganzeboom et al. (1992).

Please be advised that there are as yet no SIOPS-scores for the incomplete codes and the general categories of ISCO-08. These cases were coded as -32 'cannot be generated'.

Comment:

N-Valid: 3806

N-Missing: 60684

Minimum: 11,56

Maximum: 88,96

Median: 51,5700

Mean: 49,2791

Standard deviation: 20,22990

Derivation of data:

International Socio-Economic Index of Occupational Status (ISEI) for ISCO-08

With the introduction of ISCO-08, Harry B.G. Ganzeboom updated the derivation of ISEI-Scores. The procedure used to calculate ISEI scores for ISCO-08 generally followed the practice described for ISCO-68 and ISCO-88 in Ganzeboom et al. (1992, 1996, 2003). However, the ISEI scores for ISCO-88 are based on an updated and extended set of data. This set of data is a cumulation of all ISSP-modules surveyed between 2002 and 2007. It contains information for 42 countries and a total of 198.500 respondents. Whereas the data base for previous ISEI versions contained only information for male respondents, the updated database has information for respondents of both sexes. Additionally, Ganzeboom modified the way income data entered into the calculation. To account for the gender specific distribution of part-time work, income per hour was used instead of total income (Ganzeboom 2010a).

Please be advised that there are as yet no ISEI scores for the incomplete codes and the general categories of ISCO-88. These cases were coded as 'cannot be generated' (code -32).

dw06 INDUSTRY RESPONDENT WORKS IN

<If respondent is employed full- or part time>

For what kind of business or employer do you work?

Is something produced (what?), is it a wholesale or a retail business (what is sold?), or what general designation does your place of work have?

(Int.: Carefully record what industry or trade the respondent's place of work belongs to.)

-33 Industry cannot be categorized or inadequate description

-10 Respondent not employed full- or part-time (code 3-11 in work)

-9 No information, refused

-1 Not available 1994-2016

1 Agriculture, forestry, horticulture

2 Fishing, fish farming, animal husbandry

3 Utilities (power, water supply)

4 Mining

5 Chemical industry (incl. coal products manufacturing) and petrochemical manufacturing

6 Plastics, rubber and asbestos manufacturing

7 Quarrying and manufacturing of stones, sand and clay; ceramics and glass manufacturing

8 Iron and non-ferrous metal production, foundries and steel manufacturing

9 Steel construction, machinery and motor vehicle manufacturing

10 Electronic products, precision mechanics and optics; manufacturing of EBM-products, musical instruments, sporting and athletic goods, toys and jewellery

11 Wood product and paper manufacturing, printing

12 Leather, textile and apparel manufacturing

13 Food, drink and tobacco

14 Construction

15 Construction - specialty trade contractors

16 Wholesale trade

17 Wholesale trade agents and brokers

18 Retail trade

19 Rail transportation

20 Postal service (including: banking services)

21 Other transportation and other communication services

22 Finance and credit intermediation (commercial banking, savings institutions) except postal banking (code 20)

23 Insurance (except social security)

24 Services provided by companies or professionals, food or laundry services, publishing industries, etc.

25 Non-profit organisations (churches, associations, etc.)

26 Private households

27 Public administration (legislative, executive, justice, military)

28 Social security

Derivation of data:

This classification follows the 'ZUMA-Branchenschlüssel', which is a simplified version of the three digit industry codes from the Federal Statistical Office (Statistisches Bundesamt 1979).

Literature:

Statistisches Bundesamt (ed.) (1979). Systematik der Wirtschaftszweige mit Erläuterungen.

Stuttgart: Metzler-Poeschel.

dw12 RESP.: UNTIL WHAT YEAR IN EMPLOYMENT

<If respondent is not employed full- or part-time>

Until what year were you in full- or part-time employment, or have you never been in full- or part-time employment?

-50 Never been employed full- or part-time

-41 Data error

-10 Respondent is employed full- or part-time (code 1, 2, 12 in work)

-9 No answer

-8 Don't know

-7 Refused

Comment:

N-Valid: 24884

N-Missing: 39605

Minimum: 1917

Maximum: 2016

Median: 1988,00

Mean: 1985,45

Standard deviation: 16,251

dw12a RESP.: AGE WHEN R. STOPPED WORKING

Description of variable:

Age when respondent stopped working

-41 Data error

-32 Cannot be generated

-10 Respondent is employed full- or part-time (code 1, 2, 12 in work)

Comment:

N-Valid: 24855

N-Missing: 39635

Minimum: 10

Maximum: 86

Median: 50,00

Mean: 45,01

Standard deviation: 16,355

Derivation of data:

The data in this variable was calculated based on the information in dw12 RESP.: UNTIL WHAT YEAR IN EMPLOYMENT and yborn :

$$dw12a = yborn - dw12$$

Cases in which there was no valid information for the respondent's year of birth or the year he / she stopped working, were coded as -32 ,cannot be generated'.

If the respondent had never been employed full- or part-time (code -50 in dw12), were also coded as -32 ,cannot be generated'.

Implausible values (respondent less than ten years old when he / she stopped working) were coded as -41 'data error'.

dw12b RESP.: YEARS SINCE R. STOPPED WORKING

Description of variable:

Years since respondent stopped working

-41 Data error

-32 Cannot be generated

-10 Respondent is employed full- or part-time (code 1, 2, 12 in work)

0 Less than one year

Comment:

N-Valid: 24883

N-Missing: 39606

Minimum: 0

Maximum: 80

Median: 9,00

Mean: 12,83

Standard deviation: 12,479

Derivation of data:

The data in this variable was calculated based on the year in which the survey was conducted (year) and the information in dw12 RESP.: UNTIL WHAT YEAR IN EMPLOYMENT:

$$dw12b = year - dw12$$

Cases in which there was no valid information on when the respondent stopped working or (codes -41, -9 in dw12), were coded as -32 ,cannot be generated'.

If the respondent had never been employed full- or part-time (code -50 in dw12), were also coded as -32 ,cannot be generated'.

Implausible values (respondent was, according to dw12a, less than ten years old when he / she stopped working) were coded as -41 'data error'.

dw01a RESPONDENT: LAST OCCUPATION

<If respondent has formerly been employed full- or part-time>

1988-1992:

What was your last occupational position?

Please have a look at these cards, choose the appropriate card and tell me the answer code on the card.

(Int.: Hand over card pack. Only one choice possible. Leave chosen card on table and put other cards to the side.)

-10 Respondent is currently employed full- or part-time (code 1, 2, 12 in work), respondent has never been employed full- or part-time (code -50 in dw12)

-9 No answer

-7 Refused

1 Independent farmer

2 Independent professional

3 Self-employed in trade or craft, industry, service sector, etc.

4 Civil servants/judges/professional soldiers, <until 1986 also:> Military/alternative community service

5 Employees

6 Workers

7 In vocational training

8 Family member assisting in family business

9 <From 1991:> Farmer on a cooperative farm <1991: only for respondents from the new federal states>

Derivation of data:

The data in this variable was directly surveyed only between 1988 and 1992. For all other years this variable groups the data in dw02a.

tps68a R.: LAST OCCUP. TREIMANPRESTIGE ISCO-68

Description of variable:

Classification of last occupation (ISCO 1968) according to the occupational prestige scale

-34 Not included 2012-2016

-32 Treimanprestige cannot be generated from ISCO-code, ISCO cannot be coded (code -33 in isco68a)

-10 Respondent is currently employed full- or part-time (code 1, 2, 12 in work), respondent has never been employed full- or part-time (code -50 in dw12), until 1986 also: respondent was doing military or alternative community service (code 49 in dw12)

Comment:

N-Valid: 21005

N-Missing: 43484

Minimum: 14,4

Maximum: 78,9

Median: 39,000

Mean: 38,843

Standard deviation: 11,5738

Derivation of data:

Occupational Prestige Scale

The occupational prestige scale is based on the ISCO-68 classification of occupations.

The prestige scores in this scale were derived from the results of empirical social research in various countries. Respondents in all participating countries were asked to evaluate a number of occupations according to relative prestige and social status. Based on these evaluations a scale of prestige scores with hypothetical extreme values of 0 and 100 was then created.

In general, respondents were assigned prestige scores according to the three digit ISCO-68 code of their occupation. When an appropriate ISCO code could not be determined, prestige scores were assigned according to the occupational minor group. When no appropriate occupational minor group could be determined, the mean prestige score of the occupational major group was assigned.

For further information on the prestige scale, compare:

Donald J. Treiman 1977: Occupational Prestige in Comparative Perspective, New York: Academic Press.

(In particular: Appendix A: Standard International Occupational Prestige)

Maximum: 186,8

Median: 50,900

Mean: 55,421

Standard deviation: 25,6883

Derivation of data:

Magnitudeprestige Scale (MPS) for ISCO-68 and ISCO-88

The Magnitudeprestige Scale was designed by Bernd Wegener specifically for the context of the Federal Republic of Germany. In contrast to Treiman's scale, which is based on verbal evaluations of relative social prestige, Wegener' scale is based on a psycho-physical method of measurement. Wegener asked respondents to give implicit ratio estimations of the relative magnitude of social prestige for a sample set of occupations. From these ratio estimations, Wegener then calculated a general scale of ordinal prestige scores. This MPS-scale describes a gradual mapping of social closure.

Maximum: 90

Median: 44,00

Mean: 43,28

Standard deviation: 15,108

Derivation of data:

International Socio-Economic Index of Occupational Status (ISEI) for ISCO-68

In contrast to social prestige scales based on subjective evaluations of the relative social esteem of occupations, this index of socio-economic status was constructed using empirical data on the level of education and income related to a given occupation. The index scores were calculated for occupations coded according to ISCO-68.

Cases for which there was no valid ISCO-68 code, could not be assigned an ISEI score. These cases were coded as 'cannot be generated' (code -32).

For further information, compare:

gld68a R.: LAST OCC., GOLDTHORPE CLASS ISCO-68

Description of variable:

Goldthorpe class scheme:

Derived from information on respondent's last occupation

-34 Not included 2012-2016

-32 Insufficient occupational information for classification in class scheme

-10 Respondent is currently employed full- or part-time (code 1, 2, 12 in work), respondent has never been employed full- or part-time (code -50 in dw12), <until 1986:> respondent was doing military or alternative community service (code 49 in dw12)

1 Higher and middle grades of the service class (higher grade professionals, administrators, officials and managers, large proprietors)

2 Lower grades of the service class

3 Non-manual employees with routine tasks (mainly clerical occupations, also sales occupations)

4 Proprietors, artisans etc. with 2-49 employees

5 Small proprietors, artisans etc. with 1 or no employees

6 Farmers (self-employed)

7 Technicians, supervisors of manual workers (foremen, master craftsmen)

8 Skilled workers

9 Unskilled and semi-skilled workers

10 Agricultural workers

11 Subdivision of class 3: Occupations without attachment to an organisational hierarchy and infrastructure. (This category was added when the class scheme was adapted to include women.)

12 From 1991: Farmer on a cooperative farm <"Genossenschaftsbauer," 1991 only for respondents from the new federal states>

Derivation of data:

This classification was constructed using the information in dw02a and isco68a.

Note:

The Goldthorpe Class Scheme

The class scheme by Goldthorpe groups individuals on the basis of their occupation (ISCO-68) and their occupational position (reference number). By combining these two variables, 12 different class categories are constituted.

siops88a **RESP.: LAST OCCUPATION, SIOPS ISCO-88**

Description of variable:

Classification of last occupation (ISCO 1988) according to the Standard International Occupational Prestige Scale (SIOPS)

-34 Not included 1980-1998

-32 SIOPS cannot be generated from ISCO-code, ISCO cannot be coded (code -33 in isco88a)

-10 Respondent is currently employed full- or part-time (code 1, 2, 12 in work), respondent has never been employed full- or part-time (code -50 in dw12)

Comment:

N-Valid: 11456

N-Missing: 53033

Minimum: 13

Maximum: 78

Median: 38,00

Mean: 40,37

Standard deviation: 12,117

Derivation of data:

Standard International Occupational Prestige Scale (SIOPS) for ISCO-88

The "Standard International Occupational Prestige Scale" is based on ISCO-88. It was conceived as an alternative prestige measure to Treiman's occupational prestige scale, which is based on ISCO-68.

Please be advised that there are as yet no SIOPS-scores for the incomplete codes and the general categories of ISCO-88. These cases were coded as -32 'cannot be generated'

For further information, compare:

Ganzeboom, Harry B. G. und Donald J. Treiman 1996: Internationally Comparable Measures of Occupational Status for the 1988 International Standard Classification of Occupations, in: Social Science Research 25(3): 201-239.

Mean: 42,8124

Standard deviation: 12,89784

Derivation of data:

Standard International Occupational Prestige Scale (SIOPS) for ISCO-08

In order to generalize the "Standard International Occupational Prestige Scale" for ISCO-08, the original classification based on ISCO-88 was converted to ISCO-08 (Ganzeboom 2010). In contrast to ISEI, the construction of SIOPS is not based on a reference data set. Instead, the update to ISCO-08 is first and foremost an analytic operation. However, to generate SIOPS scores for aggregate ISCO-levels, weighting factors were needed. These weighting factors were constructed using the original set of data as described in Ganzeboom et al. (1992).

Please be advised that there are as yet no SIOPS-scores for the incomplete codes and the general categories of ISCO-08. These cases were coded as -32 'cannot be generated'.

N-Valid: 2528

N-Missing: 61961

Minimum: 11,56

Maximum: 88,96

Median: 43,5100

Mean: 44,4908

Standard deviation: 19,84958

Derivation of data:

International Socio-Economic Index of Occupational Status (ISEI) for ISCO-08

With the introduction of ISCO-08, Harry B.G. Ganzeboom updated the derivation of ISEI-Scores. The procedure used to calculate ISEI scores for ISCO-08 generally followed the practice described for ISCO-68 and ISCO-88 in Ganzeboom et al. (1992, 1996, 2003). However, the ISEI scores for ISCO-88 are based on an updated and extended set of data. This set of data is a cumulation of all ISSP-modules surveyed between 2002 and 2007. It contains information for 42 countries and a total of 198.500 respondents. Whereas the data base for previous ISEI versions contained only information for male respondents, the updated database has information for respondents of both sexes. Additionally, Ganzeboom modified the way income data entered into the calculation. To account for the gender specific distribution of part-time work, income per hour was used instead of total income (Ganzeboom 2010a).

Please be advised that there are as yet no ISEI scores for the incomplete codes and the general categories of ISCO-88. These cases were coded as 'cannot be generated' (code -32).

dw19 RESP.: LENGTH OF UNEMPLOYMENT IN WEEKS

<If respondent is employed full- or part-time and has been unemployed in the last 10 years>

How long were you unemployed altogether in the last 10 years?

(Int.: If respondent was unemployed more than once, please add up all the periods.)

-10 Not employed full- or part-time (code 3-11 in work), has not been unemployed (code 2 in dw18)

-9 No answer

-7 Refused

Comment:

N-Valid: 6234

N-Missing: 58255

Minimum: 0

Maximum: 520

Median: 26,00

Mean: 52,83

Standard deviation: 66,534

Derivation of data:

The data was originally surveyed as number of months and number of weeks. For this variable, the number of months was converted into weeks using a factor of 4.3. The result was truncated to whole numbers and then added to the number of weeks to get the total number of weeks of unemployment.

dw20 NOT EMPL.: EVER BEEN UNEMPLOYED BEFORE?

1982-1996:

<If respondent is currently not working full- or part-time, but has been working full- or part-time before>

Have you ever been unemployed (Int.: If respondent is currently unemployed: before) in the last 10 years?

1998-2012, 2016:

<If respondent is currently not working full- or part-time, but has been working full- or part-time before, and is not unemployed>

Have you ever been unemployed in the last 10 years?

2014:

<If respondent is currently not working full- or part-time and is not unemployed>

Have you ever been unemployed in the last 10 years?

-10 1982-2012, 2016: Respondent is working full- or part-time (code 1, 2, 12 in work) or respondent has never been working full- or part-time (code -50 in dw12), from 1998 additionally: or respondent is currently unemployed (code 3 in dw03);

2014: Respondent is working full- or part-time (code 1, 2 in work) or respondent is currently unemployed (code 3 in dw03)

inc R.: MONTHLY NET INCOME - OPEN+CLOSED Q.

Description of variable:

Respondent's personal net monthly income, consolidated

-50 No personal income

-32 Cannot be generated

-9 No answer

-8 Don't know

-7 Refused

Comment:

N-Valid: 47423

N-Missing: 17066

Minimum: 1

Maximum: 60000

Median: 1000,00

Mean: 1252,17

Standard deviation: 1028,488

Derivation of data:

This variable consolidates the income data from di01a (open-ended question) and di02a (income brackets). For each of the brackets in di02a the mid-point of class entered into the summary.

The lowest income category 'Under 200 EURO' received the value 150 EURO, while the highest open category of '7500 EURO and over' was coded as 8750 EURO.

When analyzing income data, please decide for yourself whether you want to include cases that report a zero income as valid data. By default, these cases are coded as -50.

hhinc HH.: MONTHLY NET INCOME - OPEN+CLOSED Q.

Description of variable:

Net monthly household income, consolidated

-50 No income

-32 Cannot be generated

-9 No answer

-8 Don't know

-7 Refused

Comment:

N-Valid: 50830

N-Missing: 13659

Minimum: 1

Maximum: 80400

Median: 1750,00

Mean: 2095,00

Standard deviation: 1504,870

Derivation of data:

This variable consolidates all available data on household income. For 1980 to 1984 it contains the sum of the respondent's personal income (inc) and the income reported for any additional members of the household (hh2inc, hh3inc, hh4inc, hh5inc, hh6inc, hh7inc, hh8inc). When there was no valid data ('refused', 'don't know' or 'no answer') in any one of these variables, no valid household income was constructed (-32 'Cannot be generated').

For 1986 and later, this variable contains the data directly surveyed with the questions documented in di05 and di06. For each of the categories in di06 the mid-point of class entered into the summary. However, the lowest income category 'Under 200 EURO' received the value 150 EURO, while the highest category of '7500 EURO and over' was coded as 8750 EURO.

When analyzing income data, please decide for yourself whether you want to include cases that report a zero income as valid data. By default, these cases are coded as -50.

di07 PER CAPITA INCOME, NET MONTHLY

Description of variable:

Net monthly per capita income

-50 No income

-32 Cannot be generated

Comment:

N-Valid: 50792

N-Missing: 13697

Minimum: 1

Maximum: 33000

Median: 733,00

Mean: 891,75

Standard deviation: 676,022

Derivation of data:

The data in this variable was calculated using the data on net monthly household income (hhinc) and the number of household members (dh04).

To calculate per capita income, the household income in hhinc was divided by the number of household members in dh04. The result was rounded to the nearest whole number.

When there was no valid data for the number of household members, per capita income was coded as -32 'cannot be generated'.

When there was no valid data on household income, per capita income was also coded as -32 'cannot be generated'.

If the respondent reported a zero income (code -50 in hhinc), per capita income was coded as -50 'no income'.

di08 EQUIVALENT INCOME OECD-MODIFIED SCALE

Description of variable:

Equivalent income: OECD-modified scale
 (based on net monthly household income)

-50 No income

-32 Cannot be generated

Comment:

N-Valid: 50477

N-Missing: 14012

Minimum: 1

Maximum: 43333

Median: 1027,00

Mean: 1224,04

Standard deviation: 851,169

Derivation of data:

The data in this variable was calculated using the data on household income in hhinc and demographic information about household members.

Equivalent income (di08) = household income (hhinc) / household weight

The household weight is computed as the sum of the individual weights of all household members. The first adult member of the household, i.e. the respondent, is considered the head of the household and is weighted by a factor of 1. Other household members age 14 and above are considered as further adult members and are weighted by a factor of 0.5. Members of the household who are 13 or younger are considered children and are weighted by a factor of 0.3. The result of the computation was rounded to the next whole number. When there was only incomplete information about household members, equivalent income was coded as -32 'cannot be generated'. When there was no valid data on household income, equivalent income was also coded as -32 'cannot be generated'. If the respondent reported a zero income (code -50 in hhinc), di07 was coded as -50 'no income'.

Note:

Equivalent household income

Equivalent income measures model household income relative to household composition. In contrast to per capita income, which only considers household size, equivalent income measures use a scale of weights to account for economies of scale and the different economic needs of adults and children.

Different equivalence scales have been proposed. The equivalence scale used in the ALLBUS program is the OECD-modified scale. This scale defines the first adult member of a household as the head of the household, who is weighted by a factor of 1. Other household members age 14 and above are considered further adult members and are weighted by a factor of 0.5. Members of the household who are 13 or younger are considered children and are weighted by a factor of 0.3.

Example:

According to the OECD-modified scale the members of a household of three, consisting of a single parent and two children age 16 and 11, are assigned the following weights:

- single parent: head of household - 1
- child age 16: counts as additional adult - 0.5
- child age 11: counts as child - 0.3

For an assumed household income of 1800€, the equivalised household income according to the OECD-modified scale would be:

$$1800\text{€} / (1+0.5+0.3) = 1000\text{€}$$

1 Yes

2 No

Comment:

In 1988 and 1994, this question was part of the ISSP-modules surveyed together with ALLBUS.

As a rule ISSP-questions are not included in this cumulative data set. However, because the question documented here has also been part of the ALLBUS-interview several times, the ISSP-data was included in this data set. Please note that, in contrast to the ALLBUS interview, the ISSP-modules are surveyed as self-completion questionnaires.

scage SPOUSE: AGE

Description of variable:

<If respondent is married (from 2002: and lives with spouse)>

Age of current spouse

-32 Cannot be generated

-10 Not married (code 3-5, 8, 9 in mstat), from 2002 also: living apart (code 2, 7 in mstat)

-1 Not available 1980-1984, 1994-1998

Comment:

N-Valid: 27678

N-Missing: 36812

Minimum: 17

Maximum: 95

Median: 50,00

Mean: 50,56

Standard deviation: 14,236

Derivation of data:

Basic rules for calculating age

Age calculation for all ALLBUS surveys followed these basic steps: First, age was calculated by subtracting the year of birth (yborn) from the year of survey (year). Next, month of the interview (xt02) and month of birth (mborn) were compared. If the month of the interview preceded the month of the respondent's birthday, the previously calculated age was reduced by 1.

When there was no valid information on either the month of birth or the month of the interview, no further adjustment of the previously calculated age was made.

When there was no valid information on the year of birth, age was assigned the code -32 'cannot be generated'.

Additional heuristics

For the 1986 and 1990 data, the following heuristic was additionally applied when there was no valid information on the month of the interview: When the respondent's month of birth came after the last month of fieldwork, it could be assumed that the respondent had not yet turned one year older and the age calculated from year of birth and year of survey was reduced by 1.

In 1991 no information on the date of the interview was available. Therefore, the following heuristic was applied to calculate age: The middle of the fieldwork phase, i.e. the month of June, was set as the default value for the month of the interview. Age was then calculated using the basic rules outlined above.

For the 2000-2004 data, the following heuristic was additionally applied when the month of the interview was the same as the respondent's month of birth: If the interview had taken place between the first and the fifteenth day of the month, it was assumed that the respondent had been interviewed before his or her birthday and the age calculated from year of birth and year of survey was reduced by 1.

sceduc SPOUSE: GENERAL SCHOOL LEAVING CERTIFIC.

<If respondent is married (1994-1998, from 2002: and lives with spouse)>

What general school leaving certificate does your spouse have?

Which of the following applies to your spouse?

(Int.: Please present card. Only one choice possible. Please request highest certificate only.)

-10 Respondent is widowed, divorced or never married (code 3-5, 8, 9 in mstat), 1994-1998, from 2002 also: respondent is living apart (code 2, 7 in mstat)

-9 No answer

-8 Don't know

-7 Refused

-1 Not available 1986

1 Finished school without school leaving certificate;

<1991 East:> Finished school without school leaving certificate, did not finish 8th grade

2 Lowest formal qualification of Germany's tripartite secondary school system, after 8 or 9 years of schooling

<Until 1991: Volks-/ Hauptschulabschluß

1991 East: Volksschulabschluß, Polytechnische Oberschule mit Abschluß 8. Klasse

from 1992: Volks-/ Hauptschulabschluß bzw. Polytechnische Oberschule mit Abschluß 8. oder 9. Klasse>

3 Intermediary secondary qualification, after 10 years of schooling

<1991 East: Polytechnische Oberschule mit Abschluß 10. Klasse

from 1992: Mittlere Reife, Realschulabschluß bzw. Polytechnische Oberschule mit Abschluß 10. Klasse

until 1991: Mittlere Reife, Realschulabschluß (Fachschulreife)>

4 Certificate qualifying for studies at a University of Applied Sciences

<Fachhochschulreife (Abschluß einer Fachoberschule, etc.)

1991 East: Fachabitur>

5 Certificate qualifying for studies at university level

<Until 1991: Abitur (Hochschulreife)

1991 East: Abitur, Erweiterte Oberschule mit Abschluß 12. Klasse (Hochschulreife)

from 1992: Abitur bzw. Erweiterte Oberschule mit Abschluß 12. Klasse (Hochschulreife)>

6 Other school leaving certificate

<From 1986: Anderen Schulabschluß

1991 West: Anderen Schulabschluß (auch in der ehemaligen DDR oder im Ausland erworbener Abschluß)

1991 East: Anderen Schulabschluß (auch in den alten Bundesländern oder im Ausland erworbener Abschluß)>

7 <From 1986:> Still at school

Derivation of data:

From 1980 to 1984 ALLBUS used a single question to collect data on the respondent's current spouse, if the respondent was married, or alternatively on the respondent's previous spouse, if the respondent was widowed or divorced. The data was originally stored in the same variable. For this cumulative data set, the information on current and previous spouses was recoded into separate variables.

This variable has been recoded so as to conform with the standardized ALLBUS coding. The sequence of answer categories shown in this documentation may therefore deviate from that actually used in the field.

-8 Don't know

-7 Refused

-1 Not available 1986

1 No completed vocational training <1980-1984: including vocational school without apprenticeship>; includes: still at school>

2 <From 1988:> On-the-job vocational training with final certificate
<Beruflich-betriebliche Anlernzeit mit Abschlusszeugnis>

3 Work placement, internship
<Berufliches Praktikum, Volontariat>

4 <From 1991:> Compact vocational training course
<Teilfacharbeiterabschluss>

5 Completed trades, crafts or agricultural apprenticeship
<Abgeschlossene gewerbliche oder landwirtschaftliche Lehre>

6 Completed commercial apprenticeship
<Abgeschlossene kaufmännische Lehre>

7 Specialized vocational college certificate <Berufsfachschulabschluss>

8 <From 1991:> Technical or vocational college certificate
<Fachschulabschluss>

9 Master (craftsman), technician or equivalent college certificate
<Meister-, Techniker- oder gleichwertiger Fachschulabschluss>

10 University of Applied Sciences degree (or engineering college degree)
<Fachhochschulabschluss (auch Abschluss einer Ingenieursschule)>

11 University degree
<Hochschulabschluss>

50 <From 1988:> Other vocational training certificate

Derivation of data:

Since 1980, the way data on vocational training has been collected in the ALLBUS program has been adapted repeatedly. Over time, both multiple response and single answer questions have been fielded and the range of answer options has been extended to include qualifications from

the former GDR. The data in variable scde01 has been constructed so as to consolidate all available data on the vocational training of the respondent's spouse. For a comprehensive description of the original data as well as the construction of the consolidated data please refer to 'Appendix B' of the Variable Report.

Derivation of data:

Since 1980, the way data on vocational training has been collected in the ALLBUS program has been adapted repeatedly. Over time, both multiple response and single answer questions have been fielded and the range of answer options has been extended to include qualifications from the former GDR. The data in variables scde05-scde16 has been constructed so as to consolidate all available data on the vocational training of the respondent's spouse. For a comprehensive description of the original data as well as the construction of the consolidated data please refer to 'Appendix B' of the Variable Report.

Derivation of data:

Since 1980, the way data on vocational training has been collected in the ALLBUS program has been adapted repeatedly. Over time, both multiple response and single answer questions have been fielded and the range of answer options has been extended to include qualifications from the former GDR. The data in variables scde05-scde16 has been constructed so as to consolidate all available data on the vocational training of the respondent's spouse. For a comprehensive description of the original data as well as the construction of the consolidated data please refer to 'Appendix B' of the Variable Report.

s	SPOUSE: ISCED 1997 - 5 LEVELS
---	-------------------------------

ciscd975	
----------	--

Description of variable:

International Standard Classification of Education (ISCED) 1997, 5 levels - spouse

-32 Cannot be generated

-10 Respondent is widowed, divorced, never married (code 3-5, 8, 9 in mstat); 1994-1998, since 2002 also: living apart (code 2, 7 in mstat)

-1 Not available 1986

1 Level 1 - Primary education or first stage of basic education

2 Level 2 - Lower secondary or second stage of basic education

3 Level 3 - (Upper) secondary education

4 Level 4 - Post-secondary non-tertiary education

5 Level 5 - First stage of tertiary education

Derivation of data:

The data in this variable was constructed based on the combination of data on the general school leaving certificate (sceduc) and on vocational or professional training (scde01, scde05-scde16).

Rule 1

When there is valid data on both the general school leaving certificate and on vocational or professional training, the case is classified according to the combination of the two qualifications. When the information on the general school leaving certificate is ambiguous ('other school leaving certificate'), the person is assumed to have the equivalent of a basic or intermediary secondary qualification ("Haupt- oder Realschulabschluss").

When the information on vocational or professional training is ambiguous ('other vocational training certificate'), the person is assumed to have the equivalent of a basic or intermediary qualification (e.g. completed apprenticeship).

Rule 2

When there is valid data on the general school leaving certificate but no valid data on vocational or professional training or when the person has no vocational or professional training, the case is classified according to the school leaving certificate.

Rule 3

When there is valid data on vocational or professional training but no valid data on the general school leaving certificate, it is assumed that the person has the minimal school qualification necessary to obtain the vocational or professional qualification and the case is classified according to this combination of qualifications.

Rule 4

When there is neither valid data on the general school leaving certificate nor on vocational or professional training, the case is coded as -32 'cannot be generated'.

When the person is still at school according to the data on the general school leaving certificate, the case is coded as -32 'cannot be generated'.

Note:

International Standard Classification of Education (ISCED) 1997

The International Standard Classification of Education (ISCED) 1997 was developed by UNESCO as an internationally comparable classification of education levels. It provides a framework for the description of educational programs that can be applied regardless of the structure of national education systems and a set of rules for assigning educational programs to a taxonomy of educational attainment (UNESCO 2006: 7). The characteristics used to classify educational programs include, for example, the field and type of education, the age at which a program is typically attended, the entrance qualification needed to participate in a program or the type of education it gives access to (UNESCO 2006: 19). ISCED 1997 is designed to encompass all forms of organized learning, i.e. it equally covers vocational and academic education (UNESCO 2006: 10).

ISCED 1997 distinguishes seven levels of education (UNESCO 2006: 19):

Level 0 - Pre-primary education

Level 1 - Primary education or first stage of basic education

Level 2 - Lower secondary or second stage of basic education

Level 3 - (Upper) secondary education

Level 4 - Post-secondary non-tertiary education

Level 5 - First stage of tertiary education

Level 6 - Second stage of tertiary education

Using survey data, ISCED 1997 can be operationalized for the German educational system as the combination of the attributes general school leaving certificate and highest vocational qualification (Hoffmeyer-Zlotnik et al. 2010: 77). The implementation of ISCED 1997 for ALLBUS is modelled on the practice documented for the German microcensus (comp. Schroedter et al. 2006: 22) and the similar rules laid out in Hoffmeyer-Zlotnik et al. 2010 (76). There are, however, a number of factors that limit the full implementation of ISCED 1997 with ALLBUS data. On the one hand, these limitations are due to the universe sampled for ALLBUS. The ALLBUS sample only includes adult respondents, i.e. persons who are 18 or older. Consequently, ISCED Level 0 'Pre-primary education' cannot be covered with ALLBUS data. On the other hand, there are limitations related to the type and scope of data surveyed. Firstly, this is the case for respondents who are still at school. These respondents cannot be assigned an ISCED level based on the type of school they attend, because this information is not available. Secondly, the ALLBUS-implementation of ISCED 1997 does not include a further differentiation of levels 3 and 5 (Schroedter et al. 2006: 22), because the data on vocational qualifications is not specific enough to accurately distinguish the proposed subcategories in all cases. And finally, ALLBUS does not distinguish between ISCED Level 5 "First Stage of Tertiary Education" and ISCED Level 6 – "Second Stage of Tertiary Education", because information on the type of university degree is only available for the latest cross-section surveys. Instead, all respondents with university degrees are classified at Level 5.

Mapping of qualifications to ISCED 1997 Levels:

Level 0 - Pre-primary education (not covered by ALLBUS)

Level 1: Primary education or first stage of basic education

Respondents who indicate that they did not finish school and have not obtained a vocational qualification are classified at ISCED Level 1. Also classified at ISCED Level 1 are respondents who indicate that they did not finish school and who did not give a valid answer to the question on occupational qualifications.

Level 2: Lower Secondary Education

Respondents who have a lower or intermediary school qualification ("Haupt- oder Realschulabschluss") and no vocational qualification or only an informal vocational qualification ('on the job training' or 'work placement/internship') are classified at ISCED Level 2.

Level 3: Upper Secondary Education

Respondents who have an entrance qualification for tertiary education ("Fachhochschulreife oder Abitur") and no vocational qualification or only an informal vocational qualification (on the job training or work placement/internship) are classified at ISCED-Level 3. Also classified at ISCED-Level 3 are respondents who have a lower or intermediary school qualification ("Haupt- oder Realschulabschluss") and additionally finished a vocational training program ("Lehre, Teilfacharbeiter- oder Berufsfachschulabschluss).

Level 4: Post Secondary Education

ISCED-Level 4 marks a level of educational attainment that goes beyond secondary education but does not satisfy the standards of tertiary education. This category includes respondents who have an entrance qualification for tertiary education and also finished a vocational training program (e.g. a traineeship program).

Level 5: Tertiary Education

Respondents who have a technical college or vocational college degree, master craftsmen or respondents with equivalent degrees, and respondents who have a university degree are classified at ISCED-Level 5.

Level 6: Second Stage of Tertiary Education (not implemented for ALLBUS)

ISCED-Level 6 would be reserved for respondents who have a research degree (e.g. a doctoral degree).

sciscd11 SPOUSE: ISCED 2011

Description of variable:

International Standard Classification of Education (ISCED) 2011 - spouse

-32 Cannot be generated

-10 Respondent is widowed, divorced, living apart or never married (code 2-5, 7-9 in mstat)

-1 Not available 1980-2010

1 Level 1 - Primary education

2 Level 2 - Lower secondary education

3 Level 3 - Upper secondary education

4 Level 4 - Post secondary non-tertiary education

5 Level 5 - Short-cycle tertiary education

6 Level 6 - Bachelor's or equivalent level

7 Level 7 - Master's or equivalent level

8 Level 8 - Doctoral or equivalent Level

Derivation of data:

The data in this variable was constructed based on the combination of data on the general school leaving certificate (sceduc) and on vocational or professional training (scde01, scde05-scd18).

Rule 1

When there is valid data on both the general school leaving certificate and on vocational or professional training, the case is classified according to the combination of the two qualifications. When the information on the general school leaving certificate is ambiguous ('other school leaving certificate'), the person is assumed to have the equivalent of a basic or intermediary secondary qualification ("Haupt- oder Realschulabschluss").

When the information on vocational or professional training is ambiguous ('other vocational training certificate'), the person is assumed to have the equivalent of a basic or intermediary qualification (e.g. completed apprenticeship).

Rule 2

When there is valid data on the general school leaving certificate but no valid data on vocational or professional training or when the person has no vocational or professional training, the case is classified according to the school leaving certificate.

Rule 3

When there is valid data on vocational or professional training but no valid data on the general school leaving certificate, it is assumed that the person has the minimal school qualification necessary to obtain the vocational or professional qualification and the case is classified according to this combination of qualifications.

Rule 4

When there is neither valid data on the general school leaving certificate nor on vocational or professional training, the case is coded as -32 'cannot be generated'.

When the person is still at school according to the data on the general school leaving certificate, the case is also coded as -32 'cannot be generated'.

Note:

International Standard Classification of Education (ISCED) 2011

The International Standard Classification of Education (ISCED) 2011 is an improved version of ISCED 1997, which was developed by UNESCO as an internationally comparable classification of education levels. Like its predecessor, ISCED 2011 provides a framework for the description of educational programs that can be applied regardless of the structure of national education systems and a set of rules for assigning educational programs to a taxonomy of educational attainment (UNESCO 2012: 6). The characteristics used to classify educational programs include, for example, the field and type of education, the age at which a program is typically attended, the entrance qualification needed to participate in a program or the type of education it gives access to (comp. Section 9 in UNESCO 2012). ISCED 1997 is designed to encompass all forms of organized learning, i.e. it equally covers vocational and academic education. For ISCED 2011, terms and definitions were updated and the rules of classification were revised. Moreover, the classification was extended to cover early childhood education and to provide a more differentiated classification of tertiary education (UNESCO 2012: 62-68).

ISCED 2011 has "parallel coding schemes for education programmes (ISCED Programmes or ISCED-P) and levels of educational attainment (ISCED Attainment or ISCED-A)" which define nine general educational levels (UNESCO 2012: 21).

ISCED-A Level 0 – Less than primary education

ISCED-A Level 1 - Primary education

ISCED-A Level 2 - Lower secondary education

ISCED-A Level 3 - Upper secondary education

ISCED-A Level 4 - Post-secondary non-tertiary education

ISCED-A Level 5 – Short-cycle tertiary education

ISCED-A Level 6 – Bachelor's or equivalent level

ISCED-A Level 7 – Master's or equivalent level

ISCED-A Level 8 – Doctoral or equivalent level

Using survey data, ISCED can be operationalized for the German educational system as the combination of the attributes general school leaving certificate and highest vocational qualification (Hoffmeyer-Zlotnik et al. 2010: 77). There are, however, a number of factors that limit the full implementation of ISCED 2011 with ALLBUS data. Because there is only insufficient data on tertiary education, ISCED 2011 has not been constructed for ALLBUS 1980-2008. Moreover, the ALLBUS sample only includes adult respondents, i.e. persons who are 18 or older. Consequently, ISCED Level 0 'Pre-primary education' is not covered by ALLBUS data. Finally, ALLBUS only implements the highest level of the ISCED 2011 classification. Information of the type needed to form classes on second- and third-digit level (comp. UNESCO 2012: 21f.) is not part of the ALLBUS data.

The implementation of ISCED 2011 could for the most part follow the established practice for ISCED 1997 (comp. Schroedter et al. 2006; Hoffmeyer-Zlotnik et al. 2010). New mappings of qualifications to ISCED levels were only necessary for the area of tertiary education.

Mapping of qualifications to ISCED-A levels

Level 0 – Less than primary education

(not covered by ALLBUS)

Level 1: Primary education

Respondents who indicate that they did not finish school and have not obtained a vocational qualification are classified at ISCED Level 1. Also classified at ISCED Level 1 are respondents who indicate that they did not finish school and who did not give a valid answer to the question on occupational qualifications.

Level 2: Lower secondary education

Respondents who have a lower or intermediary school qualification ("Haupt- oder Realschulabschluss") and no vocational qualification or only an informal vocational qualification ('on the job training' or 'work placement/internship') are classified at ISCED Level 2.

Level 3: Upper secondary education

Respondents who have an entrance qualification for tertiary education ("Fachhochschulreife oder Abitur") and no vocational qualification or only an informal vocational qualification (on the job training or work placement/internship) are classified at ISCED-Level 3. Also classified at ISCED-Level 3 are respondents who have a lower or intermediary school qualification ("Haupt- oder Realschulabschluss") and additionally finished a vocational training program ("Lehre, Teilfacharbeiter- oder Berufsfachschulabschluss").

Level 4: Post-secondary non-tertiary education

ISCED-Level 4 marks a level of educational attainment that goes beyond secondary education but does not satisfy the standards of tertiary education. This category includes respondents who have an entrance qualification for tertiary education and also finished a vocational training program (e.g. a traineeship program).

Level 5: Short-cycle tertiary education

Respondents who have a technical college or vocational college degree, master craftsmen and respondents with equivalent degrees are classified at ISCED-Level 4.

Level 6: Bachelor's or equivalent level

Respondents who have a bachelor's degree or an unspecified university degree are classified at ISCED-Level 6.

Level 7: Master's or equivalent level

Respondents who have a master's degree or an equivalent degree ("Magister", "Diplom" or "Staatsexamen") are classified at ISCED-Level 7.

Level 8: Doctoral or equivalent level

Respondents who have a research degree (e.g. a doctoral degree) are classified at ISCED-Level 8.

scdw01 SPOUSE: CURRENT OCCUPATION

<If respondent is married (1994-1998, from 2002: and lives with spouse) and spouse is not employed full- or part-time>

1988-1992:

What is your spouse's current occupational position?

Please have a look at these cards and choose the one that fits your spouse.

(Int.: Hand over card pack. Only one choice possible. Leave chosen card on table and put other cards to the side.)

-10 Respondent not married (code 3-5, 8, 9 in mstat), spouse not employed full- or part-time (code 3-11 in scwork), 1994-1998, from 2002 also: married but living apart (code 2, 7 in mstat)

-9 No answer

-8 Don't know

-7 Refused

1 Independent farmer

2 Independent professional

3 Self-employed in trade or craft, industry, service sector, etc.

4 Civil servants/judges/professional soldiers

5 Employees

6 Workers

7 In vocational training

8 Family member assisting in family business

9 <From 1991:> Farmer on a cooperative farm <"Genossenschaftsbauer," 1991 only for respondents from the new federal states>

Derivation of data:

The data in this variable was directly surveyed only between 1988 and 1992. For all other years this variable groups the data in scdw02.

sctps68 SPOUSE: CURRENT TREIMANPRESTIGE ISCO-68

Description of variable:

Classification of spouse's occupation (ISCO 1968) according to the occupational prestige scale

-34 Not included 2012-2016

-32 Treimanprestige cannot be generated from ISCO-code, ISCO cannot be coded (code -33 in scisco68)

-10 Respondent not married (code 3-5, 8, 9 in mstat), spouse not employed full- or part-time (code 3-11 in scwork), 1994-1998, from 2002 also: married but living apart (code 2, 7 in mstat)

Comment:

N-Valid: 18628

N-Missing: 45861

Minimum: 14,4

Maximum: 78,9

Median: 41,000

Mean: 42,626

Standard deviation: 12,3993

Derivation of data:

Occupational Prestige Scale

The occupational prestige scale is based on the ISCO-68 classification of occupations.

The prestige scores in this scale were derived from the results of empirical social research in various countries. Respondents in all participating countries were asked to evaluate a number of occupations according to relative prestige and social status. Based on these evaluations a scale of prestige scores with hypothetical extreme values of 0 and 100 was then created.

In general, respondents were assigned prestige scores according to the three digit ISCO-68 code of their occupation. When an appropriate ISCO code could not be determined, prestige scores were assigned according to the occupational minor group. When no appropriate occupational minor group could be determined, the mean prestige score of the occupational major group was assigned.

For further information on the prestige scale, compare:

Donald J. Treiman 1977: Occupational Prestige in Comparative Perspective, New York: Academic Press.

(In particular: Appendix A: Standard International Occupational Prestige)

Derivation of data:

Magnitudeprestige Scale (MPS) for ISCO-68 and ISCO-88

The Magnitudeprestige Scale was designed by Bernd Wegener specifically for the context of the Federal Republic of Germany. In contrast to Treiman's scale, which is based on verbal evaluations of relative social prestige, Wegener's scale is based on a psycho-physical method of measurement. Wegener asked respondents to give implicit ratio estimations of the relative magnitude of social prestige for a sample set of occupations. From these ratio estimations, Wegener then calculated a general scale of ordinal prestige scores. This MPS-scale describes a gradual mapping of social closure.

Bernd Wegener 1985: Gibt es Sozialprestige?, in: Zeitschrift für Soziologie 14: 209-235.

scisei68 SPOUSE: CURRENT OCCUPATION, ISEI ISCO-68

Description of variable:

Classification of spouse's occupation (ISCO 1968) according to the International Socio-Economic Index of Occupational Status (ISEI)

-34 Not included 1980-1998, 2012-2016

-32 ISEI cannot be generated from ISCO-code, ISCO cannot be coded (code -33 in scisco68)

-10 Respondent not married (code 3-5, 8, 9 in mstat), spouse not employed full- or part-time (code 3, 4 in scwork), from 2002 also: married but living apart (code 2, 7 in mstat)

Comment:

N-Valid: 4612

N-Missing: 59877

Minimum: 10

Maximum: 90

Median: 45,00

Mean: 48,10

Standard deviation: 16,285

Derivation of data:

International Socio-Economic Index of Occupational Status (ISEI) for ISCO-68

In contrast to social prestige scales based on subjective evaluations of the relative social esteem of occupations, this index of socio-economic status was constructed using empirical data on the level of education and income related to a given occupation. The index scores were calculated for occupations coded according to ISCO-68.

Cases for which there was no valid ISCO-68 code, could not be assigned an ISEI score. These cases were coded as 'cannot be generated' (code -32).

For further information, compare:

Harry B. G. Ganzeboom, Paul M. De Graaf, Donald J. Treiman und J. De Leeuw 1992: A Standard International Socio-Economic Index of Occupational Status, in: Social Science Research 21(1): 1-56.

scgld68 SPOUSE: CURRENT GOLDTHORPE CLASS ISCO-68

Description of variable:

Goldthorpe class scheme, respondent's spouse:

Derived from information on the current occupation of the respondent's spouse.

-34 Not included 2012-2016

-32 Insufficient occupational information for classification in class scheme

-10 Respondent not married (code 3-5, 8, 9 in mstat), spouse not employed full- or part-time (code 3, 4 in scwork), from 2002 also: married but living apart (code 2, 7 in mstat)

1 Higher and middle grades of the service class (higher grade professionals, administrators, officials and managers, large proprietors)

2 Lower grades of the service class

3 Non-manual employees with routine tasks (mainly clerical occupations, also sales occupations)

4 Proprietors, artisans etc. with 2-49 employees

5 Small proprietors, artisans etc. with 1 or no employees

6 Farmers (self-employed)

7 Technicians, supervisors of manual workers (foremen, master craftsmen)

8 Skilled workers

9 Unskilled and semi-skilled workers

10 Agricultural workers

11 Subdivision of class 3: Occupations without attachment to an organisational hierarchy and infrastructure. (This category was added when the class scheme was adapted to include women.)

12 <From 1991:> Farmer on a cooperative farm <"Genossenschaftsbauer," 1991 only for respondents from the new federal states>

Derivation of data:

This classification was constructed using the information in scdw02 and scisco68.

Note:

The Goldthorpe Class Scheme

The class scheme by Goldthorpe groups individuals on the basis of their occupation (ISCO-68) and their occupational position (reference number). By combining these two variables, 12 different class categories are constituted.

For further information, compare:

Derivation of data:

Standard International Occupational Prestige Scale (SIOPS) for ISCO-88

The "Standard International Occupational Prestige Scale" is based on ISCO-88. It was conceived as an alternative prestige measure to Treiman's occupational prestige scale, which is based on ISCO-68.

Please be advised that there are as yet no SIOPS-scores for the incomplete codes and the general categories of ISCO-88. These cases were coded as 'not classifiable' (code 0).

For further information, compare:

Ganzeboom, Harry B. G. und Donald J. Treiman 1996: Internationally Comparable Measures of Occupational Status for the 1988 International Standard Classification of Occupations, in: Social Science Research 25(3): 201-239.

Standard deviation: 16,165

Derivation of data:

International Socio-Economic Index of Occupational Status (ISEI) for ISCO-88

In contrast to social prestige scales based on subjective evaluations of the relative social esteem of occupations, this index of socio-economic status was constructed using empirical data on the level of education and income related to a given occupation. The index scores were calculated for occupations coded according to ISCO-88.

Please be advised that there are as yet no ISEI-scores for the incomplete codes and the general categories of ISCO-88. These cases were coded as 'cannot be generated' (code -32).

Minimum: 13,00

Maximum: 78,16

Median: 45,0860

Mean: 45,5556

Standard deviation: 12,91078

Derivation of data:

Standard International Occupational Prestige Scale (SIOPS) for ISCO-08

In order to generalize the "Standard International Occupational Prestige Scale" for ISCO-08, the original classification based on ISCO-88 was converted to ISCO-08 (Ganzeboom 2010). In contrast to ISEI, the construction of SIOPS is not based on a reference data set. Instead, the update to ISCO-08 is first and foremost an analytic operation. However, to generate SIOPS scores for aggregate ISCO-levels, weighting factors were needed. These weighting factors were constructed using the original set of data as described in Ganzeboom et al. (1992).

Please be advised that there are as yet no SIOPS-scores for the incomplete codes and the general categories of ISCO-08. These cases were coded as 'not classifiable' (code 0).

Derivation of data:

International Socio-Economic Index of Occupational Status (ISEI) for ISCO-08

With the introduction of ISCO-08, Harry B.G. Ganzeboom updated the derivation of ISEI-Scores. The procedure used to calculate ISEI scores for ISCO-08 generally followed the practice described for ISCO-68 and ISCO-88 in Ganzeboom et al. (1992, 1996, 2003). However, the ISEI scores for ISCO-88 are based on an updated and extended set of data. This set of data is a cumulation of all ISSP-modules surveyed between 2002 and 2007. It contains information for 42 countries and a total of 198.500 respondents. Whereas the data base for previous ISEI versions contained only information for male respondents, the updated database has information for respondents of both sexes. Additionally, Ganzeboom modified the way income data entered into the calculation. To account for the gender specific distribution of part-time work, income per hour was used instead of total income (Ganzeboom 2010a).

Please be advised that there are as yet no ISEI scores for the incomplete codes and the general categories of ISCO-88. These cases were coded as 'cannot be generated' (code -32).

sctps68a SPOUSE: LAST TREIMANPRESTIGE

Description of variable:

Classification of spouse's last occupation (ISCO 1968) according to the occupational prestige scale

-32 Treimanprestige cannot be generated from ISCO-code, ISCO cannot be coded (code -33 in scisc68a)

-10 Respondent not married (code 3-5 in mstat), spouse employed full- or part-time (code 1, 2, 12 in scwork), 1984-1992 additionally: never been employed full- or part-time (code -50 in scdw12b)

-1 Not available 1994-2016

Comment:

N-Valid: 5752

N-Missing: 58738

Minimum: 18,0

Maximum: 78,9

Median: 36,572

Mean: 37,681

Standard deviation: 10,4184

Derivation of data:

Occupational Prestige Scale

The occupational prestige scale is based on the ISCO-68 classification of occupations.

The prestige scores in this scale were derived from the results of empirical social research in various countries. Respondents in all participating countries were asked to evaluate a number of occupations according to relative prestige and social status. Based on these evaluations a scale of prestige scores with hypothetical extreme values of 0 and 100 was then created.

In general, respondents were assigned prestige scores according to the three digit ISCO-68 code of their occupation. When an appropriate ISCO code could not be determined, prestige scores were assigned according to the occupational minor group. When no appropriate occupational minor group could be determined, the mean prestige score of the occupational major group was assigned.

For further information on the prestige scale, compare:

In contrast to Treiman's scale, which is based on verbal evaluations of relative social prestige, Wegener' scale is based on a psycho-physical method of measurement. Wegener asked respondents to give implicit ratio estimations of the relative magnitude of social prestige for a sample set of occupations. From these ratio estimations, Wegener then calculated a general scale of ordinal prestige scores. This MPS-scale describes a gradual mapping of social closure.</p> <p>For further information, compare:</p> <p>Bernd Wegener 1984: Gibt es Sozialprestige? Konstruktion und Validität der Magnitude-Prestigeskala, ZUMA Arbeitsbericht 84/02.</p> <p>Bernd Wegener 1985: Gibt es Sozialprestige?, in: Zeitschrift für Soziologie 14: 209-235.</p>

scgld68a SPOUSE: LAST OCCUP.,GOLDTHORPE CLASSES

Description of variable:

Goldthorpe class scheme, respondent's spouse:

Derived from information on the last occupation of the respondent's spouse.

- 32 Insufficient occupational information for classification in class scheme
- 10 Respondent not married (code 3-5 in mstat), spouse employed full- or part-time (code 1, 2, 12 in scwork), 1984-1992 additionally: never been employed full- or part-time (code -50 in scdw12b)
- 1 Not available 1994-2016
- 1 Higher and middle grades of the service class (higher grade professionals, administrators, officials and managers, large proprietors)
- 2 Lower grades of the service class
- 3 Non-manual employees with routine tasks (mainly clerical occupations, also sales occupations)
- 4 Proprietors, artisans etc. with 2-49 employees
- 5 Small proprietors, artisans etc. with one or no employees
- 6 Farmers (self-employed)
- 7 Technicians, supervisors of manual workers (foremen, master craftsmen)
- 8 Skilled workers
- 9 Unskilled and semi-skilled workers
- 10 Agricultural workers
- 11 Subdivision of class 3: Occupations without attachment to an organisational hierarchy and infrastructure. (This category was added when the class scheme was adapted to include women.)
- 12 <From 1991:> Farmer on a cooperative farm <"Genossenschaftsbauer," 1991 only for respondents from the new federal states>

Derivation of data:

This classification was constructed using the information in scdw02a and scisc68a.

Note:

The Goldthorpe Class Scheme

The class scheme by Goldthorpe groups individuals on the basis of their occupation (ISCO-68) and their occupational position (reference number). By combining these two variables, 12 different class categories are constituted.

For further information, compare:

sfage EX-SPOUSE: AGE

Description of variable:

<If respondent is widowed or divorced>

Age of ex-spouse

-32 Cannot be generated

-10 Respondent is married or has never married (codes 1, 2 and 5 in mstat)

Comment:

N-Valid: 1815

N-Missing: 62674

Minimum: 22

Maximum: 111

Median: 65,00

Mean: 63,28

Standard deviation: 17,110

Derivation of data:

Age calculation for all ALLBUS surveys followed these basic steps: First, age was calculated by subtracting the year of birth (sfyborn) from the year of survey (year). Next, month of the interview (xt02) and month of birth (sfmborn) were compared. If the month of the interview preceded the month of the respondent's birthday, the previously calculated age was reduced by 1.

When there was no valid information on either the month of birth or the month of the interview, no further adjustment of the previously calculated age was made.

When there was no valid information on the year of birth, age was assigned the code -32 'cannot be generated'.

In 1991 no information on the date of the interview was available. Therefore, the following heuristic was applied to calculate age: The middle of the fieldwork phase, i.e. the month of June, was set as the default value for the month of the interview. Age was then calculated using the basic rules outlined above.

sfrd01 EX-SPOUSE: RELIGIOUS DENOMINATION

<If respondent is widowed or divorced>

What religion did your spouse belong to?

-10 Respondent is married or has never married (codes 1, 2, 5 in mstat)

-9 No answer

-1 Not available 1986-1991, 1994-2016

1 The German Protestant church (excluding free churches)

2 A Protestant free church

3 The Roman-Catholic church

4 Another Christian denomination

5 Another non-Christian religion

6 No religious affiliation

Derivation of data:

This variable has been recoded so as to conform with the standardized ALLBUS coding. The sequence of answer categories shown in this documentation may therefore deviate from that actually used in the field.

sfeduc EX-SPOUSE:GENERAL SCHOOL LEAVING CERTIF.

<If respondent is widowed or divorced>

What general school leaving certificate did your (last) spouse have?

Which of the following applies to your spouse?

(Int.: Please present card. Only one choice possible. Please request highest certificate only.)

-10 Respondent is married or never married (code 1, 2, 5 in mstat)

-9 No answer

-1 Not available 1986, 1990-2016

1 Finished school without school leaving certificate

2 Lowest formal qualification of Germany's tripartite secondary school system, after 8 or 9 years of schooling

<Volks-/ Hauptschulabschluß>

3 Intermediary secondary qualification, after 10 years of schooling

<Mittlere Reife, Realschulabschluß (Fachschulreife)>

4 Certificate qualifying for studies at a University of Applied Sciences

<Fachhochschulreife (Abschluß einer Fachoberschule, etc.)>

5 Certificate qualifying for studies at university level

<Abitur (Hochschulreife)>

6 Other school leaving certificate

7 <1988:> Still at school

Derivation of data:

From 1980 to 1984 ALLBUS used a single question to collect data on the respondent's current spouse, if the respondent was married, or alternatively on the respondent's previous spouse, if the respondent was widowed or divorced. The data was originally stored in the same variable. For this cumulative data set, the information on current and previous spouses was recoded into separate variables.

This variable has been recoded so as to conform with the standardized ALLBUS coding. The sequence of answer categories shown in this documentation may therefore deviate from that actually used in the field.

sfde01 EX-SPOUSE: OCCUPATIONAL TRAINING

<If respondent is widowed or divorced>

1980-1984:

What occupational training did your spouse complete?

(Int.: Please present card. Ask for last qualification only.)

1988 (highest qualification reconstructed from multiple choice question):

What vocational or professional training did your (last) spouse have? Which of the categories on the card apply to him/her? Please name the appropriate letter(s).

(Int.: Please present card. Multiple responses possible.)

-32 Cannot be generated

-10 Respondent is married or never married (code 1, 2, 5 in mstat)

-9 No answer

-1 Not available 1986, 1990-2016

1 No completed vocational training <1980-1984: (including vocational school without apprenticeship); includes: still at school>

2 <1988:> On-the-job vocational training with final certificate

<Beruflich-betriebliche Anlernzeit mit Abschlusszeugnis>

3 Work placement, internship

<Berufliches Praktikum, Volontariat>

5 Completed trades, crafts or agricultural apprenticeship

<Abgeschlossene gewerbliche oder landwirtschaftliche Lehre>

6 Completed commercial apprenticeship

<Abgeschlossene kaufmännische Lehre>

7 Specialized vocational college certificate <Berufsfachschulabschluss>

9 Master (craftsman), technician or equivalent college certificate

<Meister-, Techniker- oder gleichwertiger Fachschulabschluss>

10 University of Applied Sciences degree (or engineering college degree)

<Fachhochschulabschluss (auch Abschluss einer Ingenieursschule)>

11 University degree

<Hochschulabschluss>

50 <1988:> Other vocational training certificate

Derivation of data:

Since 1980, the way data on vocational training has been collected in the ALLBUS program has been adapted repeatedly. Over time, both multiple response and single answer questions have been fielded and the range of answer options has been extended to include qualifications from the former GDR. The data in variable sfde01 has been constructed so as to consolidate all available data on the vocational training of the respondent's former spouse. For a comprehensive description of the original data as well as the construction of the consolidated data please refer to 'Appendix B' of the Variable Report.

Derivation of data:

Since 1980, the way data on vocational training has been collected in the ALLBUS program has been adapted repeatedly. Over time, both multiple response and single answer questions have been fielded and the range of answer options has been extended to include qualifications from the former GDR. The data in variables sfde05-sfde16 has been constructed so as to consolidate all available data on the vocational training of the respondent's former spouse. For a comprehensive description of the original data as well as the construction of the consolidated data please refer to 'Appendix B' of the Variable Report.

Derivation of data:

Since 1980, the way data on vocational training has been collected in the ALLBUS program has been adapted repeatedly. Over time, both multiple response and single answer questions have been fielded and the range of answer options has been extended to include qualifications from the former GDR. The data in variables sfde05-sfde16 has been constructed so as to consolidate all available data on the vocational training of the respondent's former spouse. For a comprehensive description of the original data as well as the construction of the consolidated data please refer to 'Appendix B' of the Variable Report.

sfiscd975 EX-SPOUSE: ISCED 1997 - 5 LEVELS

Description of variable:

International Standard Classification of Education (ISCED) 1997, 5 levels - ex-spouse

- 32 Cannot be generated
- 10 Respondent is married or never married (code 1, 2, 5 in mstat)
- 1 Not available 1986, 1990-2016
- 1 Level 1 - Primary education or first stage of basic education
- 2 Level 2 - Lower secondary or second stage of basic education
- 3 Level 3 - (Upper) secondary education
- 4 Level 4 - Post-secondary non-tertiary education
- 5 Level 5 - First stage of tertiary education

Derivation of data:

The data in this variable was constructed based on the combination of data on the general school leaving certificate (sfeduc) and on vocational or professional training (sfde01, sfde05, sfde16).

Rule 1

When there is valid data on both the general school leaving certificate and on vocational or professional training, the case is classified according to the combination of the two qualifications. When the information on the general school leaving certificate is ambiguous ('other school leaving certificate'), the person is assumed to have the equivalent of a basic or intermediary secondary qualification ("Haupt- oder Realschulabschluss"). When the information on vocational or professional training is ambiguous ('other vocational training certificate'), the person is assumed to have the equivalent of a basic or intermediary qualification (e.g. completed apprenticeship).

Rule 2

When there is valid data on the general school leaving certificate but no valid data on vocational or professional training or when the person has no vocational or professional training, the case is classified according to the school leaving certificate.

Rule 3

When there is valid data on vocational or professional training but no valid data on the general school leaving certificate, it is assumed that the person has the minimal school qualification necessary to obtain the vocational or professional qualification and the case is classified according to this combination of qualifications.

Rule 4

When there is neither valid data on the general school leaving certificate nor on vocational or professional training, the case is coded as -32 'cannot be generated'. When the person is still at school according to the data on the general school leaving certificate, the case is also coded as -32 'cannot be generated'.

Note:

International Standard Classification of Education (ISCED) 1997

The International Standard Classification of Education (ISCED) 1997 was developed by UNESCO

as an internationally comparable classification of education levels. It provides a framework for the description of educational programs that can be applied regardless of the structure of national education systems and a set of rules for assigning educational programs to a taxonomy of educational attainment (UNESCO 2006: 7). The characteristics used to classify educational programs include, for example, the field and type of education, the age at which a program is typically attended, the entrance qualification needed to participate in a program or the type of education it gives access to (UNESCO 2006: 19). ISCED 1997 is designed to encompass all forms of organized learning, i.e. it equally covers vocational and academic education (UNESCO 2006: 10).

ISCED 1997 distinguishes seven levels of education (UNESCO 2006: 19):

Level 0 - Pre-primary education

Level 1 - Primary education or first stage of basic education

Level 2 - Lower secondary or second stage of basic education

Level 3 - (Upper) secondary education

Level 4 - Post-secondary non-tertiary education

Level 5 - First stage of tertiary education

Level 6 - Second stage of tertiary education

Using survey data, ISCED 1997 can be operationalized for the German educational system as the combination of the attributes general school leaving certificate and highest vocational qualification (Hoffmeyer-Zlotnik et al. 2010: 77). The implementation of ISCED 1997 for ALLBUS is modelled on the practice documented for the German microcensus (comp. Schroedter et al. 2006: 22) and the similar rules laid out in Hoffmeyer-Zlotnik et al. 2010 (76). There are, however, a number of factors that limit the full implementation of ISCED 1997 with ALLBUS data. On the one hand, these limitations are due to the universe sampled for ALLBUS. The ALLBUS sample only includes adult respondents, i.e. persons who are 18 or older. Consequently, ISCED Level 0 'Pre-primary education' cannot be covered with ALLBUS data. On the other hand, there are limitations related to the type and scope of data surveyed. Firstly, this is the case for respondents who are still at school. These respondents cannot be assigned an ISCED level based on the type of school they attend, because this information is not available. Secondly, the ALLBUS-implementation of ISCED 1997 does not include a further differentiation of levels 3 and 5 (Schroedter et al. 2006: 22), because the data on vocational qualifications is not specific enough to accurately distinguish the proposed subcategories in all cases. And finally, ALLBUS does not distinguish between ISCED Level 5 "First Stage of Tertiary Education" and ISCED Level 6 – "Second Stage of Tertiary Education", because information on the type of university degree is only available for the latest cross-section surveys. Instead, all respondents with university degrees are classified at Level 5.

Mapping of qualifications to ISCED 1997 Levels:

Level 0 - Pre-primary education (not covered by ALLBUS)

Level 1: Primary education or first stage of basic education

Respondents who indicate that they did not finish school and have not obtained a vocational qualification are classified at ISCED Level 1. Also classified at ISCED Level 1 are respondents who indicate that they did not finish school and who did not give a valid answer to the question

on occupational qualifications.

Level 2: Lower Secondary Education

Respondents who have a lower or intermediary school qualification ("Haupt- oder Realschulabschluss") and no vocational qualification or only an informal vocational qualification ('on the job training' or 'work placement/internship') are classified at ISCED Level 2.

Level 3: Upper Secondary Education

Respondents who have an entrance qualification for tertiary education ("Fachhochschulreife oder Abitur") and no vocational qualification or only an informal vocational qualification (on the job training or work placement/internship) are classified at ISCED-Level 3. Also classified at ISCED-Level 3 are respondents who have a lower or intermediary school qualification ("Haupt- oder Realschulabschluss") and additionally finished a vocational training program ("Lehre, Teilfacharbeiter- oder Berufsfachschulabschluss").

Level 4: Post Secondary Education

ISCED-Level 4 marks a level of educational attainment that goes beyond secondary education but does not satisfy the standards of tertiary education. This category includes respondents who have an entrance qualification for tertiary education and also finished a vocational training program (e.g. a traineeship program).

Level 5: Tertiary Education

Respondents who have a technical college or vocational college degree, master craftsmen or respondents with equivalent degrees, and respondents who have a university degree are classified at ISCED-Level 5.

Level 6: Second Stage of Tertiary Education (not implemented for ALLBUS)

ISCED-Level 6 would be reserved for respondents who have a research degree (e.g. a doctoral degree).

sfdw01 EX-SPOUSE: OCCUPATION

<If respondent is widowed or divorced>

1988-1992:

Which of these categories fits your (last) spouse's last occupational position?

Please have a look at these cards, choose the appropriate card and tell me the answer code on the card.

(Int.: Hand over card pack. Only one choice possible.

If divorced: ask for the last occupational position while still married, not after the divorce.

Leave chosen card on table and put other cards to the side.)

-50 <Until 1992:> Spouse has never been employed full- or part-time

-10 Respondent is married or never married (code 1, 2, 5 in mstat)

-9 No answer

-8 Don't know

-7 Refused

-1 Not available 1994-2016

1 Independent farmer

2 Independent professional

3 Self-employed in trade or craft, industry, service sector, etc.

4 Civil servants/judges/professional soldiers, <until 1986 also:> Military/alternative community service

5 Employees

6 Workers

7 In vocational training

8 Family member assisting in family business

9 <From 1991:> Farmer on a cooperative farm <"Genossenschaftsbauer," 1991 only for respondents from the new federal states>

Derivation of data:

The data in this variable was directly surveyed only between 1988 and 1992. For all other years this variable groups the data in sfdw02.

sftps68 EX-SPOUSE: TREIMANPRESTIGE

Description of variable:

Classification of last spouse's last occupation (ISCO 1968) according to the occupational prestige scale

-32 Treimanprestige cannot be generated from ISCO-code, ISCO cannot be coded (code -33 in sfisco68)

-10 Respondent is married or never married (code 1, 2, 5 in mstat), last spouse has never been employed full- or part-time (code -50 in sfdw01), 1980-1986 also: last spouse was doing military/alternative community service (code 49 in sfdw02)

-1 Not available 1994-2016

Comment:

N-Valid: 2373

N-Missing: 62117

Minimum: 18,0

Maximum: 78,9

Median: 40,000

Mean: 40,421

Standard deviation: 11,6903

Derivation of data:

Occupational Prestige Scale

The occupational prestige scale is based on the ISCO-68 classification of occupations.

The prestige scores in this scale were derived from the results of empirical social research in various countries. Respondents in all participating countries were asked to evaluate a number of occupations according to relative prestige and social status. Based on these evaluations a scale of prestige scores with hypothetical extreme values of 0 and 100 was then created.

In general, respondents were assigned prestige scores according to the three digit ISCO-68 code of their occupation. When an appropriate ISCO code could not be determined, prestige scores were assigned according to the occupational minor group. When no appropriate occupational minor group could be determined, the mean prestige score of the occupational major group was assigned.

For further information on the prestige scale, compare:

Donald J. Treiman 1977: Occupational Prestige in Comparative Perspective, New York: Academic Press.

(In particular: Appendix A: Standard International Occupational Prestige)

Minimum: 20,0

Maximum: 186,8

Median: 50,500

Mean: 57,699

Standard deviation: 28,3943

Derivation of data:

Magnitudeprestige Scale (MPS) for ISCO-68 and ISCO-88

The Magnitudeprestige Scale was designed by Bernd Wegener specifically for the context of the Federal Republic of Germany. In contrast to Treiman's scale, which is based on verbal evaluations of relative social prestige, Wegener's scale is based on a psycho-physical method of measurement. Wegener asked respondents to give implicit ratio estimations of the relative magnitude of social prestige for a sample set of occupations. From these ratio estimations, Wegener then calculated a general scale of ordinal prestige scores. This MPS-scale describes a gradual mapping of social closure.

For further information, compare:

Bernd Wegener 1984: Gibt es Sozialprestige? Konstruktion und Validität der Magnitude-Prestigeskala, ZUMA Arbeitsbericht 84/02.

Bernd Wegener 1985: Gibt es Sozialprestige?, in: Zeitschrift für Soziologie 14: 209-235.

sfgld68 EX-SPOUSE: OCCUP.,GOLDTHORPE CLASSES

Description of variable:

Goldthorpe class scheme, respondent's last spouse:

Derived from information on the last occupation of the respondent's last spouse.

- 32 Insufficient occupational information for classification in class scheme
- 10 Respondent is married or never married (code 1, 2, 5 in mstat), last spouse has never been employed full- or part-time (code -50 in sfdw01), 1980-1986 also: last spouse was doing military/alternative community service (code 49 in sfdw02)
- 1 Not available 1994-2016
- 1 Higher and middle grades of the service class (higher grade professionals, administrators, officials and managers, large proprietors)
- 2 Lower grades of the service class
- 3 Non-manual employees with routine tasks (mainly clerical occupations, also sales occupations)
- 4 Proprietors, artisans etc. with 2-49 employees
- 5 Small proprietors, artisans etc. with one or no employees
- 6 Farmers (self-employed)
- 7 Technicians, supervisors of manual workers (foremen, master craftsmen)
- 8 Skilled workers
- 9 Unskilled and semi-skilled workers
- 10 Agricultural workers
- 11 Subdivision of class 3: Occupations without attachment to an organisational hierarchy and infrastructure. (This category was added when the class scheme was adapted to include women.)
- 12 From 1991: Farmer on a cooperative farm <"Genossenschaftsbauer," 1991 only for respondents from the new federal states>

Derivation of data:

This classification was constructed using the information in sfdw02 and sfisco68.

Note:

The Goldthorpe Class Scheme

The class scheme by Goldthorpe groups individuals on the basis of their occupation (ISCO-68) and their occupational position (reference number). By combining these two variables, 12 different class categories are constituted.

For further information, compare:

	<p>Description of variable:</p> <p>Until 1992, from 2000:</p> <p><If respondent has a steady partner></p> <p>1994-1998:</p> <p><If respondent has a steady partner who does not live in the same household></p> <p>Age of steady partner</p> <p>-10 Respondent is married and lives with spouse (code 1, 6 in mstat), does not have a steady partner (code 2 in dp01), 1994-1998 additionally: lives with steady partner (code 1 in dp03)</p> <p>-9 No answer</p> <p>-8 Don't know</p> <p>-7 Refused</p> <p>-1 Not available 1980-1984</p> <p>Comment:</p> <p>N-Valid: 6437</p> <p>N-Missing: 58052</p> <p>Minimum: 15</p> <p>Maximum: 91</p> <p>Median: 31,00</p> <p>Mean: 35,27</p> <p>Standard deviation: 14,479</p> <p>Derivation of data:</p> <p>Basic rules for calculating age</p> <p>Age calculation for all ALLBUS surveys followed these basic steps: First, age was calculated by subtracting the year of birth (pyborn) from the year of survey (year). Next, month of the interview (xt02) and month of birth (pmborn) were compared. If the month of the interview preceded the month of the respondent's birthday, the previously calculated age was reduced by 1.</p> <p>When there was no valid information on either the month of birth or the month of the interview, no further adjustment of the previously calculated age was made.</p> <p>When there was no valid information on the year of birth, age was assigned the code -32 'cannot be generated'.</p> <p>Additional heuristics</p> <p>For the 1986 and 1990 data, the following heuristic was additionally applied when there was no valid information on the month of the interview: When the respondent's month of birth came after the last month of fieldwork, it could be assumed that the respondent had not yet turned one year older and the age calculated from year of birth and year of survey was reduced by 1.</p> <p>In 1991 no information on the date of the interview was available. Therefore, the following heuristic was applied to calculate age: The middle of the fieldwork phase, i.e. the month of June, was set as the default value for the month of the interview. Age was then calculated using the basic rules</p>

outlined above.

For the 1998-2004 data, the following heuristic was additionally applied when the month of the interview was the same as the respondent's month of birth: If the interview had taken place between the first and the fifteenth day of the month, it was assumed that the respondent had been interviewed before his or her birthday and the age calculated from year of birth and year of survey was reduced by 1.

pdn01 PARTNER: CITIZENSHIP, RESPONSE 1

peduc PARTNER: GENERAL SCHOOL LEAVING CERTIF.

<If respondent has a steady partner>

What general school leaving certificate does your partner have?

Which of the following applies to him/her?

(Int.: Please present card. Only one choice possible. Please request highest school leaving certificate only.)

-10 Respondent is married and lives with spouse (code 1, 6 in mstat), does not have a steady partner (code 2 in dp01)

-9 No answer

-8 Don't know

-7 Refused

-1 Not available 1980-1986

1 Finished school without school leaving certificate;

<1991 East:> Finished school without school leaving certificate, did not finish 8th grade

2 Lowest formal qualification of Germany's tripartite secondary school system, after 8 or 9 years of schooling

<Until 1991: Volks-/ Hauptschulabschluß

1991 East: Volksschulabschluß, Polytechnische Oberschule mit Abschluß 8. Klasse

from 1992: Volks-/ Hauptschulabschluß bzw. Polytechnische Oberschule mit Abschluß 8. oder 9. Klasse>

3 Intermediary secondary qualification, after 10 years of schooling

<1991 East: Polytechnische Oberschule mit Abschluß 10. Klasse

from 1992: Mittlere Reife, Realschulabschluß bzw. Polytechnische Oberschule mit Abschluß 10. Klasse

until 1991: Mittlere Reife, Realschulabschluß (Fachschulreife)>

4 Certificate qualifying for studies at a University of Applied Sciences

<Fachhochschulreife (Abschluß einer Fachoberschule, etc.)

1991 East: Fachabitur>

5 Certificate qualifying for studies at university level

<Until 1991: Abitur (Hochschulreife)

1991 East: Abitur, Erweiterte Oberschule mit Abschluß 12. Klasse (Hochschulreife)

from 1992: Abitur bzw. Erweiterte Oberschule mit Abschluß 12. Klasse (Hochschulreife)>

6 Other school leaving certificate

<From 1986: Anderen Schulabschluß

1991 West: Anderen Schulabschluß (auch in der ehemaligen DDR oder im Ausland erworbener Abschluß)

1991 East: Anderen Schulabschluß (auch in den alten Bundesländern oder im Ausland erworbener Abschluß)>

7 Still at school

Derivation of data:

This variable has been recoded so as to conform with the standardized ALLBUS coding. The sequence of answer categories shown in this documentation may therefore deviate from that actually used in the field.

pde01 PARTNER: OCCUPATIONAL TRAINING

1988 (highest qualification reconstructed from multiple choice question):

<If respondent has a steady partner>

What vocational or professional training does your steady partner have? Which of the categories on the card apply to him/her?

Please name the appropriate letter(s).

(Int.: Please present card. Multiple responses possible.)

-32 Cannot be generated

-10 Respondent is married and lives with spouse (code 1, 6 in mstat), does not have a steady partner (code 2 in dp01)

-1 Not available 1980-1986

1 No completed vocational training <includes: still at school>

2 On-the-job vocational training with final certificate

<Beruflich-betriebliche Anlernzeit mit Abschlusszeugnis>

3 Work placement, internship

<Berufliches Praktikum, Volontariat>

4 <From 1991:> Compact vocational training course

<Teilfacharbeiterabschluss>

5 Completed trades, crafts or agricultural apprenticeship

<Abgeschlossene gewerbliche oder landwirtschaftliche Lehre>

6 Completed commercial apprenticeship

<Abgeschlossene kaufmännische Lehre>

7 Specialized vocational college certificate

<Berufsfachschulabschluss>

8 <From 1991:> Technical or vocational college certificate

<Fachschulabschluss>

9 Master (craftsman), technician or equivalent college certificate

<Meister-, Techniker- oder gleichwertiger Fachschulabschluss>

10 University of Applied Sciences degree (or engineering college degree)

<Fachhochschulabschluss (auch Abschluss einer Ingenieursschule)>

11 University degree

<Hochschulabschluss>

50 Other vocational training certificate

Derivation of data:

Since 1980, the way data on vocational training has been collected in the ALLBUS program has been adapted repeatedly. Over time, both multiple response and single answer questions have been fielded and the range of answer options has been extended to include qualifications from the former GDR. The data in variable pde01 has been constructed so as to consolidate all available data on the vocational training of the respondent's partner. For a comprehensive description of the original data as well as the construction of the consolidated data please refer to 'Appendix B' of the Variable Report.

pde14 PARTNER: UNIV. OF APPL. SCIENCES DEGREE

<If steady partner is not still at school>

What vocational or professional training does your steady partner have? Which of the categories on the card apply to him/her?

Please name the appropriate letter(s).

(Int.: Please present card. Multiple responses possible.)

University of Applied Sciences degree (or engineering college degree)

<Fachhochschulabschluss (auch Abschluss einer Ingenieurschule)>

-10 Respondent is married and lives with spouse (code 1, 6 in mstat), does not have a steady partner (code 2 in dp01), steady partner still at school (code 7 in peduc); 1991 also: respondent lives in the new federal states (code 2 in eastwest)

piscd975 PARTNER: ISCED 1997 - 5 LEVELS

Description of variable:

International Standard Classification of Education (ISCED) 1997, 5 levels - partner

-32 Cannot be generated

-10 Respondent is married and lives with spouse (code 1, 6 in mstat), does not have a steady partner (code 2 in dp01)

-1 Not available 1980-1986

1 Level 1 - Primary education or first stage of basic education

2 Level 2 - Lower secondary or second stage of basic education

3 Level 3 - (Upper) secondary education

4 Level 4 - Post-secondary non-tertiary education

5 Level 5 - First stage of tertiary education

Derivation of data:

The data in this variable was constructed based on the combination of data on the general school leaving certificate (peduc) and on vocational or professional training (pde05-pde16).

Rule 1

When there is valid data on both the general school leaving certificate and on vocational or professional training, the case is classified according to the combination of the two qualifications.

When the information on the general school leaving certificate is ambiguous ('other school leaving certificate'), the person is assumed to have the equivalent of a basic or intermediary secondary qualification ("Haupt- oder Realschulabschluss").

When the information on vocational or professional training is ambiguous ('other vocational training certificate'), the person is assumed to have the equivalent of a basic or intermediary qualification (e.g. completed apprenticeship).

Rule 2

When there is valid data on the general school leaving certificate but no valid data on vocational or professional training or when the person has no vocational or professional training, the case is classified according to the school leaving certificate.

Rule 3

When there is valid data on vocational or professional training but no valid data on the general school leaving certificate, it is assumed that the person has the minimal school qualification necessary to obtain the vocational or professional qualification and the case is classified according to this combination of qualifications.

Rule 4

When there is neither valid data on the general school leaving certificate nor on vocational or professional training, the case is coded as -32 'cannot be generated'.

When the person is still at school according to the data on the general school leaving certificate, the case is also coded as -32 'cannot be generated'.

Note:

International Standard Classification of Education (ISCED) 1997

The International Standard Classification of Education (ISCED) 1997 was developed by UNESCO as an internationally comparable classification of education levels. It provides a framework for the description of educational programs that can be applied regardless of the structure of national education systems and a set of rules for assigning educational programs to a taxonomy of educational attainment (UNESCO 2006: 7). The characteristics used to classify educational programs include, for example, the field and type of education, the age at which a program is typically attended, the entrance qualification needed to participate in a program or the type of education it gives access to (UNESCO 2006: 19). ISCED 1997 is designed to encompass all forms of organized learning, i.e. it equally covers vocational and academic education (UNESCO 2006: 10).

ISCED 1997 distinguishes seven levels of education (UNESCO 2006: 19):

- Level 0 - Pre-primary education
- Level 1 - Primary education or first stage of basic education
- Level 2 - Lower secondary or second stage of basic education
- Level 3 - (Upper) secondary education
- Level 4 - Post-secondary non-tertiary education
- Level 5 - First stage of tertiary education
- Level 6 - Second stage of tertiary education

Using survey data, ISCED 1997 can be operationalized for the German educational system as the combination of the attributes general school leaving certificate and highest vocational qualification (Hoffmeyer-Zlotnik et al. 2010: 77). The implementation of ISCED 1997 for ALLBUS is modelled on the practice documented for the German microcensus (comp. Schroedter et al. 2006: 22) and the similar rules laid out in Hoffmeyer-Zlotnik et al. 2010 (76). There are, however, a number of factors that limit the full implementation of ISCED 1997 with ALLBUS data. On the one hand, these limitations are due to the universe sampled for ALLBUS. The ALLBUS sample only includes adult respondents, i.e. persons who are 18 or older. Consequently, ISCED Level 0 'Pre-primary education' cannot be covered with ALLBUS data. On the other hand, there are limitations related to the type and scope of data surveyed. Firstly, this is the case for respondents who are still at school. These respondents cannot be assigned an ISCED level based on the type of school they attend, because this information is not available. Secondly, the ALLBUS-implementation of ISCED 1997 does not include a further differentiation of levels 3 and 5 (Schroedter et al. 2006: 22), because the data on vocational qualifications is not specific enough to accurately distinguish the proposed subcategories in all cases. And finally, ALLBUS does not distinguish between ISCED Level 5 "First Stage of Tertiary Education" and ISCED Level 6 – "Second Stage of Tertiary Education", because information on the type of university degree is only available for the latest cross-section surveys. Instead, all respondents with university degrees are classified at Level 5.

Mapping of qualifications to ISCED 1997 Levels:

Level 0 - Pre-primary education (not covered by ALLBUS)

Level 1: Primary education or first stage of basic education

Respondents who indicate that they did not finish school and have not obtained a vocational qualification are classified at ISCED Level 1. Also classified at ISCED Level 1 are respondents

who indicate that they did not finish school and who did not give a valid answer to the question on occupational qualifications.

Level 2: Lower Secondary Education

Respondents who have a lower or intermediary school qualification ("Haupt- oder Realschulabschluss") and no vocational qualification or only an informal vocational qualification ('on the job training' or 'work placement/internship') are classified at ISCED Level 2.

Level 3: Upper Secondary Education

Respondents who have an entrance qualification for tertiary education ("Fachhochschulreife oder Abitur") and no vocational qualification or only an informal vocational qualification (on the job training or work placement/internship) are classified at ISCED-Level 3. Also classified at ISCED-Level 3 are respondents who have a lower or intermediary school qualification ("Haupt- oder Realschulabschluss") and additionally finished a vocational training program ("Lehre, Teilfacharbeiter- oder Berufsfachschulabschluss").

Level 4: Post Secondary Education

ISCED-Level 4 marks a level of educational attainment that goes beyond secondary education but does not satisfy the standards of tertiary education. This category includes respondents who have an entrance qualification for tertiary education and also finished a vocational training program (e.g. a traineeship program).

Level 5: Tertiary Education

Respondents who have a technical college or vocational college degree, master craftsmen or respondents with equivalent degrees, and respondents who have a university degree are classified at ISCED-Level 5.

Level 6: Second Stage of Tertiary Education (not implemented for ALLBUS)

ISCED-Level 6 would be reserved for respondents who have a research degree (e.g. a doctoral degree).

piscd11 PARTNER: ISCED 2011

Description of variable:

International Standard Classification of Education (ISCED) 2011 - partner

-32 Cannot be generated

-10 Respondent is married and lives with spouse (code 1, 6 in mstat), does not have a steady partner (code 2 in dp01)

-1 Not available 1980-2010

1 Level 1 - Primary education

2 Level 2 - Lower secondary education

3 Level 3 - Upper secondary education

4 Level 4 - Post secondary non-tertiary education

5 Level 5 - Short-cycle tertiary education

6 Level 6 - Bachelor's or equivalent level

7 Level 7 - Master's or equivalent level

8 Level 8 - Doctoral or equivalent level

Derivation of data:

The data in this variable was constructed based on the combination of data on the general school leaving certificate (peduc) and on vocational or professional training (pde05-pde18).

Rule 1

When there is valid data on both the general school leaving certificate and on vocational or professional training, the case is classified according to the combination of the two qualifications.

When the information on the general school leaving certificate is ambiguous ('other school leaving certificate'), the person is assumed to have the equivalent of a basic or intermediary secondary qualification ("Haupt- oder Realschulabschluss").

When the information on vocational or professional training is ambiguous ('other vocational training certificate'), the person is assumed to have the equivalent of a basic or intermediary qualification (e.g. completed apprenticeship).

Rule 2

When there is valid data on the general school leaving certificate but no valid data on vocational or professional training or when the person has no vocational or professional training, the case is classified according to the school leaving certificate.

Rule 3

When there is valid data on vocational or professional training but no valid data on the general school leaving certificate, it is assumed that the person has the minimal school qualification necessary to obtain the vocational or professional qualification and the case is classified according to this combination of qualifications.

Rule 4

When there is neither valid data on the general school leaving certificate nor on vocational or professional training, the case is coded as -32 'cannot be generated'.

When the person is still at school according to the data on the general school leaving certificate, the case is also coded as -32 'cannot be generated'.

Note:

International Standard Classification of Education (ISCED) 2011

The International Standard Classification of Education (ISCED) 2011 is an improved version of ISCED 1997, which was developed by UNESCO as an internationally comparable classification of education levels. Like its predecessor, ISCED 2011 provides a framework for the description of educational programs that can be applied regardless of the structure of national education systems and a set of rules for assigning educational programs to a taxonomy of educational attainment (UNESCO 2012: 6). The characteristics used to classify educational programs include, for example, the field and type of education, the age at which a program is typically attended, the entrance qualification needed to participate in a program or the type of education it gives access to (comp. Section 9 in UNESCO 2012). ISCED 1997 is designed to encompass all forms of organized learning, i.e. it equally covers vocational and academic education. For ISCED 2011, terms and definitions were updated and the rules of classification were revised. Moreover, the classification was extended to cover early childhood education and to provide a more differentiated classification of tertiary education (UNESCO 2012: 62-68).

ISCED 2011 has "parallel coding schemes for education programmes (ISCED Programmes or ISCED-P) and levels of educational attainment (ISCED Attainment or ISCED-A)" which define nine general educational levels (UNESCO 2012: 21).

ISCED-A Level 0 – Less than primary education

ISCED-A Level 1 - Primary education

ISCED-A Level 2 - Lower secondary education

ISCED-A Level 3 - Upper secondary education

ISCED-A Level 4 - Post-secondary non-tertiary education

ISCED-A Level 5 – Short-cycle tertiary education

ISCED-A Level 6 – Bachelor's or equivalent level

ISCED-A Level 7 – Master's or equivalent level

ISCED-A Level 8 – Doctoral or equivalent level

Using survey data, ISCED can be operationalized for the German educational system as the combination of the attributes general school leaving certificate and highest vocational qualification (Hoffmeyer-Zlotnik et al. 2010: 77). There are, however, a number of factors that limit the full implementation of ISCED 2011 with ALLBUS data. Because there is only insufficient data on tertiary education, ISCED 2011 has not been constructed for ALLBUS 1980-2008. Moreover, the ALLBUS sample only includes adult respondents, i.e. persons who are 18 or older. Consequently, ISCED Level 0 'Pre-primary education' is not covered by ALLBUS data. Finally, ALLBUS only implements the highest level of the ISCED 2011 classification. Information of the type needed to form classes on second- and third-digit level (comp. UNESCO 2012: 21f.) is not part of the ALLBUS data.

The implementation of ISCED 2011 could for the most part follow the established practice for ISCED 1997 (comp. Schroedter et al. 2006; Hoffmeyer-Zlotnik et al. 2010). New mappings of qualifications to ISCED levels were only necessary for the area of tertiary education.

Mapping of qualifications to ISCED-A levels

Level 0 – Less than primary education

(not covered by ALLBUS)

Level 1: Primary education

Respondents who indicate that they did not finish school and have not obtained a vocational qualification are classified at ISCED Level 1. Also classified at ISCED Level 1 are respondents who indicate that they did not finish school and who did not give a valid answer to the question on occupational qualifications.

Level 2: Lower secondary education

Respondents who have a lower or intermediary school qualification ("Haupt- oder Realschulabschluss") and no vocational qualification or only an informal vocational qualification ('on the job training' or 'work placement/internship') are classified at ISCED Level 2.

Level 3: Upper secondary education

Respondents who have an entrance qualification for tertiary education ("Fachhochschulreife oder Abitur") and no vocational qualification or only an informal vocational qualification (on the job training or work placement/internship) are classified at ISCED-Level 3. Also classified at ISCED-Level 3 are respondents who have a lower or intermediary school qualification ("Haupt- oder Realschulabschluss") and additionally finished a vocational training program ("Lehre, Teilfacharbeiter- oder Berufsfachschulabschluss").

Level 4: Post-secondary non-tertiary education

ISCED-Level 4 marks a level of educational attainment that goes beyond secondary education but does not satisfy the standards of tertiary education. This category includes respondents who have an entrance qualification for tertiary education and also finished a vocational training program (e.g. a traineeship program).

Level 5: Short-cycle tertiary education

Respondents who have a technical college or vocational college degree, master craftsmen and respondents with equivalent degrees are classified at ISCED-Level 4.

Level 6: Bachelor's or equivalent level

Respondents who have a bachelor's degree or an unspecified university degree are classified at ISCED-Level 6.

Level 7: Master's or equivalent level

Respondents who have a master's degree or an equivalent degree ("Magister", "Diplom" or "Staatsexamen") are classified at ISCED-Level 7.

Level 8: Doctoral or equivalent level

Respondents who have a research degree (e.g. a doctoral degree) are classified at ISCED-Level 8.

pdw03 PARTNER: STATUS OF NON-EMPLOYMENT

<If steady partner is not employed full- or part-time>

Please look through this card and tell me what applies to your partner.

Please tell me the appropriate answer code.

(Int.: Please present card. Only one choice possible.)

-10 Respondent is married and lives with spouse (code 1, 6 in mstat), does not have a steady partner (code 2 in dp01), steady partner is employed full- or part-time (code 1, 2, 7 in pwork)

-9 No answer

-8 Don't know

-7 Refused

-1 Not available 1980-1988

1 A He/she is a pupil/student

2 B He/she is retired

3 C He/she is currently unemployed

4 D He/she is a housewife/househusband

5 E <Until 2012:> He is doing military/alternative community service;

<from 2014:> He/she is doing voluntary military/community service

6 F He/she is not (full- to "half-" time) employed for other reasons

pts68 PARTNER: TREIMANPRESTIGE ISCO-68

Description of variable:

Classification of steady partner's occupation (ISCO 1968) according to the occupational prestige scale

-34 Not included 2012-2016

-32 Treimanprestige cannot be generated from ISCO-code, ISCO cannot be coded (code -33 in pisco68)

-10 Respondent is married and lives with spouse (code 1, 6 in mstat), does not have a steady partner (code 2 in dp01), steady partner not employed full- or part-time (code 3-6 in pwork)

-1 Not available 1980-1986

Comment:

N-Valid: 3395

N-Missing: 61095

Minimum: 18,0

Maximum: 78,9

Median: 41,500

Mean: 42,342

Standard deviation: 11,8076

Derivation of data:

Occupational Prestige Scale

The occupational prestige scale is based on the ISCO-68 classification of occupations.

The prestige scores in this scale were derived from the results of empirical social research in various countries. Respondents in all participating countries were asked to evaluate a number of occupations according to relative prestige and social status. Based on these evaluations a scale of prestige scores with hypothetical extreme values of 0 and 100 was then created.

In general, respondents were assigned prestige scores according to the three digit ISCO-68 code of their occupation. When an appropriate ISCO code could not be determined, prestige scores were assigned according to the occupational minor group. When no appropriate occupational minor group could be determined, the mean prestige score of the occupational major group was assigned.

For further information on the prestige scale, compare:

Donald J. Treiman 1977: Occupational Prestige in Comparative Perspective, New York: Academic Press.

(In particular: Appendix A: Standard International Occupational Prestige)

pmps68 PARTNER: MAGNITUDEPRESTIGE ISCO-68

Description of variable:

Classification of steady partner's occupation (ISCO 1968) according to the Magnitudeprestige Scale (MPS)

-34 Not included 2012-2016

-32 MPS cannot be generated from ISCO-code, ISCO cannot be coded (code -33 in pisco68)

-10 Respondent is married and lives with spouse (code 1, 6 in mstat), does not have a steady partner (code 2 in dp01), steady partner not employed full- or part-time (code 3-6 in pwork)

-1 Not available 1980-1986

Comment:

N-Valid: 3395

N-Missing: 61095

Minimum: 20,0

Maximum: 186,8

Median: 54,800

Mean: 63,554

Standard deviation: 28,2118

Derivation of data:

Magnitudeprestige Scale (MPS) for ISCO-68 and ISCO-88

The Magnitudeprestige Scale was designed by Bernd Wegener specifically for the context of the Federal Republic of Germany. In contrast to Treiman's scale, which is based on verbal evaluations of relative social prestige, Wegener's scale is based on a psycho-physical method of measurement. Wegener asked respondents to give implicit ratio estimations of the relative magnitude of social prestige for a sample set of occupations. From these ratio estimations, Wegener then calculated a general scale of ordinal prestige scores. This MPS-scale describes a gradual mapping of social closure.

For further information, compare:

Bernd Wegener 1984: Gibt es Sozialprestige? Konstruktion und Validität der Magnitude-Prestigeskala, ZUMA Arbeitsbericht 84/02.

Bernd Wegener 1985: Gibt es Sozialprestige?, in: Zeitschrift für Soziologie 14: 209-235.

pisei68 PARTNER: ISEI ISCO-68

Description of variable:

Classification of steady partner's occupation (ISCO 1968) according to the International Socio-Economic Index of Occupational Status (ISEI)

-34 Not included 1988-1998, 2012-2016

-32 ISEI cannot be generated from ISCO-code, ISCO cannot be coded (code -33 in pisco68)

-10 Respondent is married and lives with spouse (code 1, 6 in Vmstat), does not have a steady partner (code 2 in dp01), steady partner not employed full- or part-time (code 3-6 in pwork)

-1 Not available 1980-1986

Comment:

N-Valid: 1455

N-Missing: 63034

Minimum: 16

Maximum: 90

Median: 45,00

Mean: 47,80

Standard deviation: 14,796

Derivation of data:

International Socio-Economic Index of Occupational Status (ISEI) for ISCO-68

In contrast to social prestige scales based on subjective evaluations of the relative social esteem of occupations, this index of socio-economic status was constructed using empirical data on the level of education and income related to a given occupation. The index scores were calculated for occupations coded according to ISCO-68.

Cases for which there was no valid ISCO-68 code, could not be assigned an ISEI score. These cases were coded as 'cannot be generated' (code -32).

For further information, compare:

Harry B. G. Ganzeboom, Paul M. De Graaf, Donald J. Treiman und J. De Leeuw 1992: A Standard International Socio-Economic Index of Occupational Status, in: Social Science Research 21(1): 1-56.

pgld68 PARTNER: GOLDTHORPE CLASSES ISCO-68

Description of variable:

Goldthorpe class scheme:

derived from information on the occupation of the respondent's steady partner

-34 Not included 2012-2016

-32 Insufficient occupational information for classification in class scheme

-10 Respondent is married and lives with spouse (code 1, 6 in mstat), does not have a steady partner (code 2 in dp01), steady partner not employed full- or part-time (code 3-6 in pwork)

-1 Not available 1980-1986

1 Higher and middle grades of the service class (higher grade professionals, administrators, officials and managers, large proprietors)

2 Lower grades of the service class

3 Non-manual employees with routine tasks (mainly clerical occupations, also sales occupations)

4 Proprietors, artisans etc. with 2-49 employees

5 Small proprietors, artisans etc. with one or no employees

6 Farmers (self-employed)

7 Technicians, supervisors of manual workers (foremen, master craftsmen)

8 Skilled workers

9 Unskilled and semi-skilled workers

10 Agricultural workers

11 Subdivision of class 3: Occupations without attachment to an organisational hierarchy and infrastructure. (This category was added when the class scheme was adapted to include women.)

12 <From 1991:> Farmer on a cooperative farm <"Genossenschaftsbauer," 1991 only for respondents from the new federal states>

Derivation of data:

This classification was constructed using the information in pdw02 and pisco68.

Note:

The Goldthorpe Class Scheme

The class scheme by Goldthorpe groups individuals on the basis of their occupation (ISCO-68) and their occupational position (reference number). By combining these two variables, 12 different class categories are constituted.

For further information, compare:

Petra Beckmann und Reiner Trometer 1991: Neue Dienstleistungen des ALLBUS : Haushalts- und Familientypologien, Klassenschema nach Goldthorpe, in: ZUMA Nachrichten 15(28): 7-17.

Standard deviation: 12,153

Derivation of data:

Standard International Occupational Prestige Scale (SIOPS) for ISCO-88

The "Standard International Occupational Prestige Scale" is based on ISCO-88. It was conceived as an alternative prestige measure to Treiman's occupational prestige scale, which is based on ISCO-68.

Please be advised that there are as yet no SIOPS-scores for the incomplete codes and the general categories of ISCO-88. These cases were coded as -32 'cannot be generated'

For further information, compare:

Ganzeboom, Harry B. G. und Donald J. Treiman 1996: Internationally Comparable Measures of Occupational Status for the 1988 International Standard Classification of Occupations, in: Social Science Research 25(3): 201-239.

pmps88 PARTNER: MAGNITUDEPRESTIGE ISCO-88

Description of variable:

Classification of steady partner's occupation (ISCO 1988) according to the Magnitudeprestige Scale (MPS)

-34 Not included 1988-1991, 2012-2016

-32 MPS cannot be generated from ISCO-code, ISCO cannot be coded (code -33 in pisco88)

-10 Respondent is married and lives with spouse (code 1, 6 in mstat), does not have a steady partner (code 2 in dp01), steady partner not employed full- or part-time (code 3-6 in pwork)

Median: 67,100

Mean: 74,614

Standard deviation: 30,5524

Derivation of data:

Magnitudeprestige Scale (MPS) for ISCO-68 and ISCO-88

The Magnitudeprestige Scale was designed by Bernd Wegener specifically for the context of the Federal Republic of Germany. In contrast to Treiman's scale, which is based on verbal evaluations of relative social prestige, Wegener's scale is based on a psycho-physical method of measurement. Wegener asked respondents to give implicit ratio estimations of the relative magnitude of social prestige for a sample set of occupations. From these ratio estimations, Wegener then calculated a general scale of ordinal prestige scores. This MPS-scale describes a gradual mapping of social closure.

For further information, compare:

Bernd Wegener 1984: Gibt es Sozialprestige? Konstruktion und Validität der Magnitude-Prestigeskala, ZUMA Arbeitsbericht 84/02.

Bernd Wegener 1985: Gibt es Sozialprestige?, in: Zeitschrift für Soziologie 14: 209-235.

pisei88 PARTNER: ISEI ISCO-88

Description of variable:

Classification of steady partner's occupation (ISCO 1988) according to the International Socio-Economic Index of Occupational Status (ISEI)

-34 Not included 1988-1998

-33 ISEI cannot be generated from ISCO-code, ISCO cannot be coded (code -33 in pisco88)

-10 Respondent is married and lives with spouse (code 1, 6 in mstat), does not have a steady partner (code 2 in dp01), steady partner not employed full- or part-time (code 3-6 in pwork)

Maximum: 90

Median: 45,00

Mean: 46,35

Standard deviation: 15,307

Derivation of data:

International Socio-Economic Index of Occupational Status (ISEI) for ISCO-88

In contrast to social prestige scales based on subjective evaluations of the relative social esteem of occupations, this index of socio-economic status was constructed using empirical data on the level of education and income related to a given occupation. The index scores were calculated for occupations coded according to ISCO-88.

Please be advised that there are as yet no ISEI-scores for the incomplete codes and the general categories of ISCO-88. These cases were coded as 'cannot be generated' (code -32).

Derivation of data:

Standard International Occupational Prestige Scale (SIOPS) for ISCO-08

In order to generalize the "Standard International Occupational Prestige Scale" for ISCO-08, the original classification based on ISCO-88 was converted to ISCO-08 (Ganzeboom 2010). In contrast to ISEI, the construction of SIOPS is not based on a reference data set. Instead, the update to ISCO-08 is first and foremost an analytic operation. However, to generate SIOPS scores for aggregate ISCO-levels, weighting factors were needed. These weighting factors were constructed using the original set of data as described in Ganzeboom et al. (1992).

Please be advised that there are as yet no SIOPS-scores for the incomplete codes and the general categories of ISCO-08. These cases were coded as -32 'cannot be generated'.

Standard deviation: 20,50831

Derivation of data:

International Socio-Economic Index of Occupational Status (ISEI) for ISCO-08

With the introduction of ISCO-08, Harry B.G. Ganzeboom updated the derivation of ISEI-Scores. The procedure used to calculate ISEI scores for ISCO-08 generally followed the practice described for ISCO-68 and ISCO-88 in Ganzeboom et al. (1992, 1996, 2003). However, the ISEI scores for ISCO-88 are based on an updated and extended set of data. This set of data is a cumulation of all ISSP-modules surveyed between 2002 and 2007. It contains information for 42 countries and a total of 198.500 respondents. Whereas the data base for previous ISEI versions contained only information for male respondents, the updated database has information for respondents of both sexes. Additionally, Ganzeboom modified the way income data entered into the calculation. To account for the gender specific distribution of part-time work, income per hour was used instead of total income (Ganzeboom 2010a).

Please be advised that there are as yet no ISEI scores for the incomplete codes and the general categories of ISCO-88. These cases were coded as 'cannot be generated' (code -32).

pts68a PARTNER: LAST OCCUPATION,TREIMANPRESTIGE

Description of variable:

Classification of steady partner's last occupation (ISCO 1968) according to the occupational prestige scale

-32 Treimanprestige cannot be generated from ISCO-code, ISCO cannot be coded (code -33 in pisco68a)

-10 Respondent is married and lives with spouse (code 1, 6 in mstat), does not have a steady partner (code 2 in dp01), steady partner is working full- or part-time (code 1, 2, 7 in pwork) or has never been working full- or part-time (code -50 in pdw12)

-1 Not available 1980-1986, 1994-2016

Comment:

N-Valid: 134

N-Missing: 64355

Minimum: 18,0

Maximum: 65,3

Median: 34,000

Mean: 37,233

Standard deviation: 10,1861

Derivation of data:

Occupational Prestige Scale

The occupational prestige scale is based on the ISCO-68 classification of occupations.

The prestige scores in this scale were derived from the results of empirical social research in various countries. Respondents in all participating countries were asked to evaluate a number of occupations according to relative prestige and social status. Based on these evaluations a scale of prestige scores with hypothetical extreme values of 0 and 100 was then created.

In general, respondents were assigned prestige scores according to the three digit ISCO-68 code of their occupation. When an appropriate ISCO code could not be determined, prestige scores were assigned according to the occupational minor group. When no appropriate occupational minor group could be determined, the mean prestige score of the occupational major group was assigned.

For further information on the prestige scale, compare:

Donald J. Treiman 1977: Occupational Prestige in Comparative Perspective, New York: Academic Press.

(In particular: Appendix A: Standard International Occupational Prestige)

Donald J. Treiman 1979: Begriff und Messung des Berufsprestiges in der international vergleichenden Mobilitätsforschung, in: Franz Urban Pappi (Hg.), Sozialstrukturanalysen mit Umfragedaten. Probleme der standardisierten Erfassung von Hintergrundmerkmalen in

allgemeinen Bevölkerungsumfragen, Königstein/ Ts.: Athenäum, 124-168.

Christof Wolf 1995: Sozio-ökonomischer Status und berufliches Prestige. Ein kleines Kompendium sozialwissenschaftlicher Skalen auf Basis der beruflichen Stellung und Tätigkeit, in: ZUMA Nachrichten 19(37): 102-136.

pmps68a PARTNER: LAST OCCUP. MAGNITUDEPRESTIGE

Description of variable:

Classification of steady partner's last occupation (ISCO 1968) according to the Magnitudeprestige Scale (MPS)

-32 MPS cannot be generated from ISCO-code, ISCO cannot be coded (code -33 in pisco68a)

-10 Respondent is married and lives with spouse (code 1, 6 in mstat), does not have a steady partner (code 2 in dp01), steady partner is working full- or part-time (code 1, 2, 7 in pwork) or has never been working full- or part-time (code -50 in pdw12)

-1 Not available 1980-1986, 1994-2016

Comment:

Minimum: 20,0

Maximum: 117,4

Median: 44,569

Mean: 52,556

Standard deviation: 21,7549

Derivation of data:

Magnitudeprestige Scale (MPS) for ISCO-68 and ISCO-88

The Magnitudeprestige Scale was designed by Bernd Wegener specifically for the context of the Federal Republic of Germany. In contrast to Treiman's scale, which is based on verbal evaluations of relative social prestige, Wegener's scale is based on a psycho-physical method of measurement. Wegener asked respondents to give implicit ratio estimations of the relative magnitude of social prestige for a sample set of occupations. From these ratio estimations, Wegener then calculated a general scale of ordinal prestige scores. This MPS-scale describes a gradual mapping of social closure.

For further information, compare:

Bernd Wegener 1984: Gibt es Sozialprestige? Konstruktion und Validität der Magnitude-Prestigeskala, ZUMA Arbeitsbericht 84/02.

Bernd Wegener 1985: Gibt es Sozialprestige?, in: Zeitschrift für Soziologie 14: 209-235.

pgld68a PARTNER: LAST OCCUP., GOLDTHORPE CLASSES

Description of variable:

<If steady partner has previously been working>

Goldthorpe class scheme:

Derived from information on the last occupation of the respondent's steady partner

- 32 Insufficient occupational information for classification in class scheme
- 10 Respondent is married and lives with spouse (code 1, 6 in mstat), does not have a steady partner (code 2 in dp01), steady partner is working full- or part-time (code 1, 2, 7 in pwork) or has never been working full- or part-time (code -50 in pdw12)
- 1 Not available 1980-1986, 1994-2016
- 1 Higher and middle grades of the service class (higher grade professionals, administrators, officials and managers, large proprietors)
- 2 Lower grades of the service class
- 3 Non-manual employees with routine tasks (mainly clerical occupations, also sales occupations)
- 4 Proprietors, artisans etc. with 2-49 employees
- 5 Small proprietors, artisans etc. with one or no employees
- 6 Farmers (self-employed)
- 7 Technicians, supervisors of manual workers (foremen, master craftsmen)
- 8 Skilled workers
- 9 Unskilled and semi-skilled workers
- 10 Agricultural workers
- 11 Subdivision of class 3: Occupations without attachment to an organisational hierarchy and infrastructure. (This category was added when the class scheme was adapted to include women.)
- 12 <From 1991:> Farmer on a cooperative farm <"Genossenschaftsbauer," 1991 only for respondents from the new federal states>

Derivation of data:

This classification was constructed using the information in pdw02a and pisco68a.

Note:

The Goldthorpe Class Scheme

The class scheme by Goldthorpe groups individuals on the basis of their occupation (ISCO-68) and their occupational position (reference number). By combining these two variables, 12 different class categories are constituted.

For further information, compare:

4 D Another Christian denomination

5 E Another non-Christian religion

6 F No religion

Comment:

In 1991 and 2008, this question was part of the ISSP-modules surveyed together with ALLBUS.

As a rule ISSP-questions are not included in this cumulative data set. However, because the question documented here has also been part of the ALLBUS-interview several times, the ISSP-data was included in this data set. Please note that, in contrast to the ALLBUS interview, the ISSP-modules are surveyed as self-completion questionnaires.

Derivation of data:

This variable has been recoded so as to conform with the standardized ALLBUS coding. The sequence of answer categories shown in this documentation may therefore deviate from that actually used in the field.

fde01 FATHER: OCCUP. TRAINING, HIGHEST DEGREE

1984:

<If father is known>

What vocational or professional training does your father have?

(Int.: Please present card. Ask for last qualification only.)

1986-1990, 1994, 2004 (highest qualification reconstructed from multiple choice question):

<If father is known>

What vocational or professional training does (did) your FATHER have? Which of the categories on the card apply / applied to him?

Please name the appropriate letters.

(Int.: Please present card. Multiple responses possible, unless 'no completed vocational training' is selected.)

From 2006:

<If father is known>

What vocational or professional training does (did) your FATHER have? Which of the categories on the card apply / applied to him?

Please name the appropriate letter.

(Int.: Please present card. Only one choice possible. Please only ask about the highest qualification.)

-10 Father unknown (code -55 in fdw01)

-9 No answer

-8 Don't know

-1 Not available 1980, 1982, 1991, 1992, 1996-2002

1 No completed vocational training <1984: (including vocational school without apprenticeship)>

2 <1986-2004:> On-the-job vocational training with final certificate
 <Beruflich-betriebliche Anlernzeit mit Abschlusszeugnis>

3 <1984-2004:> Work placement, internship
 <Berufliches Praktikum, Volontariat>

4 <1994, 2004:> Compact vocational training course
 <Teilfacharbeiterabschluss>

5 Completed trades, crafts or agricultural apprenticeship
 <Abgeschlossene gewerbliche oder landwirtschaftliche Lehre>

6 Completed commercial apprenticeship
 <Abgeschlossene kaufmännische Lehre>

7 <1984-2004:> Specialized vocational college certificate
 <Berufsfachschulabschluss>

8 <1994, 2004:> Technical or vocational college certificate
 <Fachschulabschluss>

9 Master (craftsman), technician or equivalent college certificate
 <Meister-, Techniker- oder gleichwertiger Fachschulabschluss>

10 University of Applied Sciences degree (or engineering college degree)
 <Fachhochschulabschluss (auch Abschluss einer Ingenieursschule)>

11 University degree

<Hochschulabschluss>

50 <From 1986:> Other vocational training certificate

Derivation of data:

Since 1980, the way data on vocational training has been collected in the ALLBUS program has been adapted repeatedly. Over time, both multiple response and single answer questions have been fielded and the range of answer options has been extended to include qualifications from the former GDR. The data in variable fde01 has been constructed so as to consolidate all available data on the vocational training of the respondent's father. For a comprehensive description of the original data as well as the construction of the consolidated data please refer to 'Appendix B' of the Variable Report.

fde09 FATHER: COMMERCIAL TRAINEESHIP

1984 (data reconstructed from single response question):

<If father is known>

What vocational or professional training does your father have?

(Int.: Please present card. Ask for last qualification only.)

1986-1990, 1994, 2004:

<If father is known>

What vocational or professional training does (did) your FATHER have? Which of the categories on the card apply / applied to him?

Please name the appropriate letters.

(Int.: Please present card. Multiple responses possible, unless 'no completed vocational training' is selected.)

From 2006 (data reconstructed from single response question):

<If father is known>

What vocational or professional training does (did) your FATHER have? Which of the categories on the card apply / applied to him?

Please name the appropriate letter.

(Int.: Please present card. Only one choice possible. Please only ask about the highest qualification.)

Completed commercial apprenticeship

Derivation of data:

Since 1980, the way data on vocational training has been collected in the ALLBUS program has been adapted repeatedly. Over time, both multiple response and single answer questions have been fielded and the range of answer options has been extended to include qualifications from the former GDR. The data in variables fde05-fde16 has been constructed so as to consolidate all available data on the vocational training of the respondent's father. For a comprehensive description of the original data as well as the construction of the consolidated data please refer to 'Appendix B' of the Variable Report.

Derivation of data:

Since 1980, the way data on vocational training has been collected in the ALLBUS program has been adapted repeatedly. Over time, both multiple response and single answer questions have been fielded and the range of answer options has been extended to include qualifications from the former GDR. The data in variables fde05-fde16 has been constructed so as to consolidate all available data on the vocational training of the respondent's father. For a comprehensive description of the original data as well as the construction of the consolidated data please refer to 'Appendix B' of the Variable Report.

fde16 FATHER: OTHER VOCATIONAL TRAINING CERT.

1986-1990, 1994, 2004:

<If father is known>

What vocational or professional training does (did) your FATHER have? Which of the categories on the card apply / applied to him?

Please name the appropriate letters.

(Int.: Please present card. Multiple responses possible , unless 'no completed vocational training' is selected.)

From 2006 (data reconstructed from single response question):

<If father is known>

What vocational or professional training does (did) your FATHER have? Which of the categories on the card apply / applied to him?

Please name the appropriate letter.

(Int.: Please present card. Only one choice possible. Please only ask about the highest qualification.)

Other vocational training certificate

fiscd975 FATHER: ISCED 1997 - 5 LEVELS

Description of variable:

International Standard Classification of Education (ISCED) 1997, 5 levels - father

-32 Cannot be generated

-10 Father unknown (code -55 in fdw02)

-1 Not available 1980, 1982, 1991, 1992, 1996-2002

1 Level 1 - Primary education or first stage of basic education

2 Level 2 - Lower secondary or second stage of basic education

3 Level 3 - (Upper) secondary education

4 Level 4 - Post-secondary non-tertiary education

5 Level 5 - First stage of tertiary education

Derivation of data:

The data in this variable was constructed based on the combination of data on the general school leaving certificate (educ) and on vocational or professional training (fde01, fde05-fde16).

Rule 1

When there is valid data on both the general school leaving certificate and on vocational or professional training, the case is classified according to the combination of the two qualifications.

When the information on the general school leaving certificate is ambiguous ('other school leaving certificate'), the person is assumed to have the equivalent of a basic or intermediary secondary qualification ("Haupt- oder Realschulabschluss").

When the information on vocational or professional training is ambiguous ('other vocational training certificate'), the person is assumed to have the equivalent of a basic or intermediary qualification (e.g. completed apprenticeship).

Rule 2

When there is valid data on the general school leaving certificate but no valid data on vocational or professional training or when the person has no vocational or professional training, the case is classified according to the school leaving certificate.

Rule 3

When there is valid data on vocational or professional training but no valid data on the general school leaving certificate, it is assumed that the person has the minimal school qualification necessary to obtain the vocational or professional qualification and the case is classified according to this combination of qualifications.

Rule 4

When there is neither valid data on the general school leaving certificate nor on vocational or professional training, the case is coded as -32 'cannot be generated'.

When the person is still at school according to the data on the general school leaving certificate, the case is also coded as -32 'cannot be generated'.

Note:

International Standard Classification of Education (ISCED) 1997

The International Standard Classification of Education (ISCED) 1997 was developed by UNESCO

as an internationally comparable classification of education levels. It provides a framework for the description of educational programs that can be applied regardless of the structure of national education systems and a set of rules for assigning educational programs to a taxonomy of educational attainment (UNESCO 2006: 7). The characteristics used to classify educational programs include, for example, the field and type of education, the age at which a program is typically attended, the entrance qualification needed to participate in a program or the type of education it gives access to (UNESCO 2006: 19). ISCED 1997 is designed to encompass all forms of organized learning, i.e. it equally covers vocational and academic education (UNESCO 2006: 10).

ISCED 1997 distinguishes seven levels of education (UNESCO 2006: 19):

Level 0 - Pre-primary education

Level 1 - Primary education or first stage of basic education

Level 2 - Lower secondary or second stage of basic education

Level 3 - (Upper) secondary education

Level 4 - Post-secondary non-tertiary education

Level 5 - First stage of tertiary education

Level 6 - Second stage of tertiary education

Using survey data, ISCED 1997 can be operationalized for the German educational system as the combination of the attributes general school leaving certificate and highest vocational qualification (Hoffmeyer-Zlotnik et al. 2010: 77). The implementation of ISCED 1997 for ALLBUS is modelled on the practice documented for the German microcensus (comp. Schroedter et al. 2006: 22) and the similar rules laid out in Hoffmeyer-Zlotnik et al. 2010 (76). There are, however, a number of factors that limit the full implementation of ISCED 1997 with ALLBUS data. On the one hand, these limitations are due to the universe sampled for ALLBUS. The ALLBUS sample only includes adult respondents, i.e. persons who are 18 or older. Consequently, ISCED Level 0 'Pre-primary education' cannot be covered with ALLBUS data. On the other hand, there are limitations related to the type and scope of data surveyed. Firstly, this is the case for respondents who are still at school. These respondents cannot be assigned an ISCED level based on the type of school they attend, because this information is not available. Secondly, the ALLBUS-implementation of ISCED 1997 does not include a further differentiation of levels 3 and 5 (Schroedter et al. 2006: 22), because the data on vocational qualifications is not specific enough to accurately distinguish the proposed subcategories in all cases. And finally, ALLBUS does not distinguish between ISCED Level 5 "First Stage of Tertiary Education" and ISCED Level 6 – "Second Stage of Tertiary Education", because information on the type of university degree is only available for the latest cross-section surveys. Instead, all respondents with university degrees are classified at Level 5.

Mapping of qualifications to ISCED 1997 Levels:

Level 0 - Pre-primary education (not covered by ALLBUS)

Level 1: Primary education or first stage of basic education

Respondents who indicate that they did not finish school and have not obtained a vocational qualification are classified at ISCED Level 1. Also classified at ISCED Level 1 are respondents who indicate that they did not finish school and who did not give a valid answer to the question

on occupational qualifications.

Level 2: Lower Secondary Education

Respondents who have a lower or intermediary school qualification ("Haupt- oder Realschulabschluss") and no vocational qualification or only an informal vocational qualification ('on the job training' or 'work placement/internship') are classified at ISCED Level 2.

Level 3: Upper Secondary Education

Respondents who have an entrance qualification for tertiary education ("Fachhochschulreife oder Abitur") and no vocational qualification or only an informal vocational qualification (on the job training or work placement/internship) are classified at ISCED-Level 3. Also classified at ISCED-Level 3 are respondents who have a lower or intermediary school qualification ("Haupt- oder Realschulabschluss") and additionally finished a vocational training program ("Lehre, Teilfacharbeiter- oder Berufsfachschulabschluss").

Level 4: Post Secondary Education

ISCED-Level 4 marks a level of educational attainment that goes beyond secondary education but does not satisfy the standards of tertiary education. This category includes respondents who have an entrance qualification for tertiary education and also finished a vocational training program (e.g. a traineeship program).

Level 5: Tertiary Education

Respondents who have a technical college or vocational college degree, master craftsmen or respondents with equivalent degrees, and respondents who have a university degree are classified at ISCED-Level 5.

Level 6: Second Stage of Tertiary Education (not implemented for ALLBUS)

ISCED-Level 6 would be reserved for respondents who have a research degree (e.g. a doctoral degree).

fdw01 FATHER: OCCUPATION

1988-1992:

When you were fifteen years old, what was the occupational position of your father?

Please have a look at these cards, choose the appropriate card and tell me the answer code on the card.

(Int.: Hand over card pack. Only one choice possible. Leave chosen card on table and put other cards to the side. Note: If father was not working at this time, please informally ascertain why and circle the appropriate answer code.)

- 55 Father unknown
- 54 Father was no longer alive
- 53 <2012, 2014:> Father was not working for other reasons
- 52 <From 1982:> Father was in the war/a prisoner of war at the time
- 51 <From 1982:> Father was unemployed at the time
- 50 Father was retired at the time
- 9 No answer
- 8 Don't know
- 7 Refused
- 1 Independent farmer
- 2 Independent professional
- 3 Self-employed in trade or craft, industry, service sector, etc.
- 4 Civil servants/judges/professional soldiers <until 1986 also:> Military/alternative community service
- 5 Employees
- 6 Workers
- 7 In vocational training
- 8 Family member assisting in family business
- 9 <From 1991:> Farmer on a cooperative farm <"Genossenschaftsbauer," 1991 only for respondents from the new federal states>

Derivation of data:

The data in this variable was directly surveyed only between 1988 and 1992. For all other years this variable groups the data in fdw02.

fdw05 FATHER: OCCUPATIONAL MAJOR GROUP ISCO-68

Description of variable:

Classification of occupation of father according to the ISCO-68 major group

-34 Not included 2012-2016

-10 Father not working, unknown etc. (code -55 to -50 in fdw02); until 1986 also: father was doing military/alternative community service (code 49 in fdw02)

-9 No answer

-8 Don't know

1 Professional, technical and related workers

2 Administrative and managerial workers in public service and industry

3 Clerical and related professions

4 Sales professions

5 Service professions (incl. members of the armed forces)

6 Agricultural, animal husbandry and forestry workers, fishermen and hunters

7 Production and related workers, transport equipment operators and laborers

8 Others

ftps68 FATHER: TREIMANPRESTIGE ISCO-68

Description of variable:

Classification of occupation of father (ISCO 1968) according to the occupational prestige scale

-34 Not included 2012-2016

-32 Treimanprestige cannot be generated from ISCO-code, ISCO cannot be coded (code -33 in fisco68)

-10 Father not working, unknown etc. (code -55 to -50 in fdw02); until 1986 also: father was doing military/alternative community service (code 49 in fdw02)

Comment:

N-Valid: 44746

N-Missing: 19743

Minimum: 14,0

Maximum: 78,9

Median: 39,900

Mean: 39,959

Standard deviation: 11,4987

Derivation of data:

Occupational Prestige Scale

The occupational prestige scale is based on the ISCO-68 classification of occupations.

The prestige scores in this scale were derived from the results of empirical social research in various countries. Respondents in all participating countries were asked to evaluate a number of occupations according to relative prestige and social status. Based on these evaluations a scale of prestige scores with hypothetical extreme values of 0 and 100 was then created.

In general, respondents were assigned prestige scores according to the three digit ISCO-68 code of their occupation. When an appropriate ISCO code could not be determined, prestige scores were assigned according to the occupational minor group. When no appropriate occupational minor group could be determined, the mean prestige score of the occupational major group was assigned.

For further information on the prestige scale, compare:

Donald J. Treiman 1977: Occupational Prestige in Comparative Perspective, New York: Academic Press.

(In particular: Appendix A: Standard International Occupational Prestige)

Donald J. Treiman 1979: Begriff und Messung des Berufsprestiges in der international vergleichenden Mobilitätsforschung, in: Franz Urban Pappi (Hg.), Sozialstrukturanalysen mit Umfragedaten. Probleme der standardisierten Erfassung von Hintergrundsmerkmalen in allgemeinen Bevölkerungsumfragen, Königstein/ Ts.: Athenäum, 124-168.

fmps68 FATHER: MAGNITUDEPRESTIGE ISCO-68

Description of variable:

Classification of occupation of father (ISCO 1968) according to the Magnitudeprestige Scale (MPS)

-34 Not included 2012-2016

-32 MPS cannot be generated from ISCO-code, ISCO cannot be coded (code -33 in fisco68)

-10 Father not working, unknown etc. (code -55 to -50 in fdw02); until 1986 also: father was doing military/alternative community service (code 49 in fdw02)

Comment:

N-Valid: 44746

N-Missing: 19743

Minimum: 20,0

Maximum: 186,8

Median: 50,500

Mean: 56,221

Standard deviation: 28,0525

Derivation of data:

Magnitudeprestige Scale (MPS) for ISCO-68 and ISCO-88

The Magnitudeprestige Scale was designed by Bernd Wegener specifically for the context of the Federal Republic of Germany. In contrast to Treiman's scale, which is based on verbal evaluations of relative social prestige, Wegener's scale is based on a psycho-physical method of measurement. Wegener asked respondents to give implicit ratio estimations of the relative magnitude of social prestige for a sample set of occupations. From these ratio estimations, Wegener then calculated a general scale of ordinal prestige scores. This MPS-scale describes a gradual mapping of social closure.

For further information, compare:

Bernd Wegener 1984: Gibt es Sozialprestige? Konstruktion und Validität der Magnitude-Prestigeskala, ZUMA Arbeitsbericht 84/02.

Bernd Wegener 1985: Gibt es Sozialprestige?, in: Zeitschrift für Soziologie 14: 209-235.

fisei68 FATHER: ISEI ISCO-68

Description of variable:

Classification of occupation of father (ISCO 1968) according to the International Socio-Economic Index of Occupational Status (ISEI)

-34 Not included 1980-1998, 2012-2016

-32 ISEI cannot be generated from ISCO-code, ISCO cannot be coded (code -33 in fisco68)

-10 Father not working, unknown etc. (code -55 to -50 in fdw02)

Comment:

N-Valid: 12770

N-Missing: 51719

Minimum: 10

Maximum: 90

Median: 36,00

Mean: 41,22

Standard deviation: 16,119

Derivation of data:

International Socio-Economic Index of Occupational Status (ISEI) for ISCO-68

In contrast to social prestige scales based on subjective evaluations of the relative social esteem of occupations, this index of socio-economic status was constructed using empirical data on the level of education and income related to a given occupation. The index scores were calculated for occupations coded according to ISCO-68.

Cases for which there was no valid ISCO-68 code, could not be assigned an ISEI score. These cases were coded as 'cannot be generated' (code -32).

For further information, compare:

Harry B. G. Ganzeboom, Paul M. De Graaf, Donald J. Treiman und J. De Leeuw 1992: A Standard International Socio-Economic Index of Occupational Status, in: Social Science Research 21(1): 1-56.

fgld68 FATHER: GOLDTHORPE CLASSES ISCO-68

Description of variable:

Goldthorpe class scheme:

Derived from information on respondent's father's occupation

-34 Not available 2012-2016

-32 Insufficient occupational information for classification in class scheme

-10 Father not working, unknown etc. (code -55 to -50 in fdw02); until 1986 also: father was doing military/alternative community service (code 49 in fdw02)

1 Higher and middle grades of the service class (higher grade professionals, administrators, officials and managers, large proprietors)

2 Lower grades of the service class

3 Non-manual employees with routine tasks (mainly clerical occupations, also sales occupations)

4 Proprietors, artisans etc. with 2-49 employees

5 Small proprietors, artisans etc. with one or no employee

6 Farmers (self-employed)

7 Technicians, supervisors of manual workers (foremen, master craftsmen)

8 Skilled workers

9 Unskilled and semi-skilled workers

10 Agricultural workers

11 Subdivision of class 3: Occupations without attachment to an organisational hierarchy and infrastructure. (This category was added when the class scheme was adapted to include women.)

12 <From 1991:> Farmer on a cooperative farm <"Genossenschaftsbauer," 1991 only for respondents from the new federal states>

Derivation of data:

This classification was constructed using the information in fdw02 and fisco68.

Note:

The Goldthorpe Class Scheme

The class scheme by Goldthorpe groups individuals on the basis of their occupation (ISCO-68) and their occupational position (reference number). By combining these two variables, 12 different class categories are constituted.

For further information, compare:

Petra Beckmann und Reiner Trometer 1991: Neue Dienstleistungen des ALLBUS : Haushalts- und Familientypologien, Klassenschema nach Goldthorpe, in: ZUMA Nachrichten 15(28): 7-17.

fsiops08 FATHER: SIOPS ISCO-08

Description of variable:

Classification of occupation of father (ISCO 2008) according to the Standard International Occupational Prestige Scale (SIOPS)

-34 Not included 1980-2012

-32 SIOPS cannot be generated from ISCO-code, ISCO cannot be coded (code -33 in fisco08)

-10 Father not working, unknown etc. (code -55 to -50 in fdw02)

Comment:

N-Valid: 5783

N-Missing: 58706

Minimum: 13,00

Maximum: 78,16

Median: 41,1300

Mean: 42,5846

Standard deviation: 12,66954

Derivation of data:

Standard International Occupational Prestige Scale (SIOPS) for ISCO-08

In order to generalize the "Standard International Occupational Prestige Scale" for ISCO-08, the original classification based on ISCO-88 was converted to ISCO-08 (Ganzeboom 2010). In contrast to ISEI, the construction of SIOPS is not based on a reference data set. Instead, the update to ISCO-08 is first and foremost an analytic operation. However, to generate SIOPS scores for aggregate ISCO-levels, weighting factors were needed. These weighting factors were constructed using the original set of data as described in Ganzeboom et al. (1992).

Please be advised that there are as yet no SIOPS-scores for the incomplete codes and the general categories of ISCO-08. These cases were coded as -32 'cannot be generated'.

fisei08 FATHER: ISEI ISCO-08

Description of variable:

Classification of occupation of father (ISCO 2008) according to the International Socio-Economic Index of Occupational Status (ISEI)

-34 Not included 1980-2012

-32 ISEI cannot be generated from ISCO-code, ISCO cannot be coded (code -33 in fisco08)

-10 Father not working, unknown etc. (code -55 to -50 in fdw02)

Comment:

N-Valid: 5783

N-Missing: 58706

Minimum: 11,56

Maximum: 88,96

Median: 31,7200

Mean: 40,0813

Standard deviation: 20,60621

Derivation of data:

International Socio-Economic Index of Occupational Status (ISEI) for ISCO-08

With the introduction of ISCO-08, Harry B.G. Ganzeboom updated the derivation of ISEI-Scores. The procedure used to calculate ISEI scores for ISCO-08 generally followed the practice described for ISCO-68 and ISCO-88 in Ganzeboom et al. (1992, 1996, 2003). However, the ISEI scores for ISCO-88 are based on an updated and extended set of data. This set of data is a cumulation of all ISSP-modules surveyed between 2002 and 2007. It contains information for 42 countries and a total of 198.500 respondents. Whereas the data base for previous ISEI versions contained only information for male respondents, the updated database has information for respondents of both sexes. Additionally, Ganzeboom modified the way income data entered into the calculation. To account for the gender specific distribution of part-time work, income per hour was used instead of total income (Ganzeboom 2010a).

Please be advised that there are as yet no ISEI scores for the incomplete codes and the general categories of ISCO-88. These cases were coded as 'cannot be generated' (code -32).

1 B The German Protestant church (excluding free churches)

2 C A Protestant free church

3 A The Roman Catholic Church

4 D Another Christian denomination

5 E Another non-Christian religion

6 F No religion

Comment:

In 1991 and 2008, this question was part of the ISSP-modules surveyed together with ALLBUS.

As a rule ISSP-questions are not included in this cumulative data set. However, because the question documented here has also been part of the ALLBUS-interview several times, the ISSP-data was included in this data set. Please note that, in contrast to the ALLBUS interview, the ISSP-modules are surveyed as self-completion questionnaires.

Derivation of data:

This variable has been recoded so as to conform with the standardized ALLBUS coding. The sequence of answer categories shown in this documentation may therefore deviate from that actually used in the field.

<Meister-, Techniker- oder gleichwertiger Fachschulabschluss>

10 University of Applied Sciences degree (or engineering college degree)
<Fachhochschulabschluss (auch Abschluss einer Ingenieursschule)>

11 University degree
<Hochschulabschluss>

50 <From 1986:> Other vocational training certificate

Derivation of data:

Since 1980, the way data on vocational training has been collected in the ALLBUS program has been adapted repeatedly. Over time, both multiple response and single answer questions have been fielded and the range of answer options has been extended to include qualifications from the former GDR. The data in variable mde01 has been constructed so as to consolidate all available data on the vocational training of the respondent's mother. For a comprehensive description of the original data as well as the construction of the consolidated data please refer to 'Appendix B' of the Variable Report.

Derivation of data:

Since 1980, the way data on vocational training has been collected in the ALLBUS program has been adapted repeatedly. Over time, both multiple response and single answer questions have been fielded and the range of answer options has been extended to include qualifications from the former GDR. The data in variables mde05-mde16 has been constructed so as to consolidate all available data on the vocational training of the respondent's mother. For a comprehensive description of the original data as well as the construction of the consolidated data please refer to 'Appendix B' of the Variable Report.

Derivation of data:

Since 1980, the way data on vocational training has been collected in the ALLBUS program has been adapted repeatedly. Over time, both multiple response and single answer questions have been fielded and the range of answer options has been extended to include qualifications from the former GDR. The data in variables mde05-mde16 has been constructed so as to consolidate all available data on the vocational training of the respondent's mother. For a comprehensive description of the original data as well as the construction of the consolidated data please refer to 'Appendix B' of the Variable Report.

miscd975 MOTHER: ISCED 1997 - 5 LEVELS

Description of variable:

International Standard Classification of Education (ISCED) 1997, 5 levels - mother

-32 Not classifiable

-1 Not available 1980, 1982, 1991, 1992, 1996-2002

1 Level 1 - Primary education or first stage of basic education

2 Level 2 - Lower secondary or second stage of basic education

3 Level 3 - (Upper) secondary education

4 Level 4 - Post-secondary non-tertiary education

5 Level 5 - First stage of tertiary education

Derivation of data:

The data in this variable was constructed based on the combination of data on the general school leaving certificate (meduc) and on vocational or professional training (mde01, mde05-mde16, mde21, mde22).

Rule 1

When there is valid data on both the general school leaving certificate and on vocational or professional training, the case is classified according to the combination of the two qualifications.

When the information on the general school leaving certificate is ambiguous ('other school leaving certificate'), the person is assumed to have the equivalent of a basic or intermediary secondary qualification ("Haupt- oder Realschulabschluss").

When the information on vocational or professional training is ambiguous ('other vocational training certificate'), the person is assumed to have the equivalent of a basic or intermediary qualification (e.g. completed apprenticeship).

Rule 2

When there is valid data on the general school leaving certificate but no valid data on vocational or professional training or when the person has no vocational or professional training, the case is classified according to the school leaving certificate.

Rule 3

When there is valid data on vocational or professional training but no valid data on the general school leaving certificate, it is assumed that the person has the minimal school qualification necessary to obtain the vocational or professional qualification and the case is classified according to this combination of qualifications.

Rule 4

When there is neither valid data on the general school leaving certificate nor on vocational or professional training, the case is coded as -32 'cannot be generated'.

When the person is still at school according to the data on the general school leaving certificate, the case is also coded as -32 'cannot be generated'.

Note:

International Standard Classification of Education (ISCED) 1997

The International Standard Classification of Education (ISCED) 1997 was developed by UNESCO

as an internationally comparable classification of education levels. It provides a framework for the description of educational programs that can be applied regardless of the structure of national education systems and a set of rules for assigning educational programs to a taxonomy of educational attainment (UNESCO 2006: 7). The characteristics used to classify educational programs include, for example, the field and type of education, the age at which a program is typically attended, the entrance qualification needed to participate in a program or the type of education it gives access to (UNESCO 2006: 19). ISCED 1997 is designed to encompass all forms of organized learning, i.e. it equally covers vocational and academic education (UNESCO 2006: 10).

ISCED 1997 distinguishes seven levels of education (UNESCO 2006: 19):

Level 0 - Pre-primary education

Level 1 - Primary education or first stage of basic education

Level 2 - Lower secondary or second stage of basic education

Level 3 - (Upper) secondary education

Level 4 - Post-secondary non-tertiary education

Level 5 - First stage of tertiary education

Level 6 - Second stage of tertiary education

Using survey data, ISCED 1997 can be operationalized for the German educational system as the combination of the attributes general school leaving certificate and highest vocational qualification (Hoffmeyer-Zlotnik et al. 2010: 77). The implementation of ISCED 1997 for ALLBUS is modelled on the practice documented for the German microcensus (comp. Schroedter et al. 2006: 22) and the similar rules laid out in Hoffmeyer-Zlotnik et al. 2010 (76). There are, however, a number of factors that limit the full implementation of ISCED 1997 with ALLBUS data. On the one hand, these limitations are due to the universe sampled for ALLBUS. The ALLBUS sample only includes adult respondents, i.e. persons who are 18 or older. Consequently, ISCED Level 0 'Pre-primary education' cannot be covered with ALLBUS data. On the other hand, there are limitations related to the type and scope of data surveyed. Firstly, this is the case for respondents who are still at school. These respondents cannot be assigned an ISCED level based on the type of school they attend, because this information is not available. Secondly, the ALLBUS-implementation of ISCED 1997 does not include a further differentiation of levels 3 and 5 (Schroedter et al. 2006: 22), because the data on vocational qualifications is not specific enough to accurately distinguish the proposed subcategories in all cases. And finally, ALLBUS does not distinguish between ISCED Level 5 "First Stage of Tertiary Education" and ISCED Level 6 – "Second Stage of Tertiary Education", because information on the type of university degree is only available for the latest cross-section surveys. Instead, all respondents with university degrees are classified at Level 5.

Mapping of qualifications to ISCED 1997 Levels:

Level 0 - Pre-primary education (not covered by ALLBUS)

Level 1: Primary education or first stage of basic education

Respondents who indicate that they did not finish school and have not obtained a vocational qualification are classified at ISCED Level 1. Also classified at ISCED Level 1 are respondents who indicate that they did not finish school and who did not give a valid answer to the question

on occupational qualifications.

Level 2: Lower Secondary Education

Respondents who have a lower or intermediary school qualification ("Haupt- oder Realschulabschluss") and no vocational qualification or only an informal vocational qualification ('on the job training' or 'work placement/internship') are classified at ISCED Level 2.

Level 3: Upper Secondary Education

Respondents who have an entrance qualification for tertiary education ("Fachhochschulreife oder Abitur") and no vocational qualification or only an informal vocational qualification (on the job training or work placement/internship) are classified at ISCED-Level 3. Also classified at ISCED-Level 3 are respondents who have a lower or intermediary school qualification ("Haupt- oder Realschulabschluss") and additionally finished a vocational training program ("Lehre, Teilfacharbeiter- oder Berufsfachschulabschluss").

Level 4: Post Secondary Education

ISCED-Level 4 marks a level of educational attainment that goes beyond secondary education but does not satisfy the standards of tertiary education. This category includes respondents who have an entrance qualification for tertiary education and also finished a vocational training program (e.g. a traineeship program).

Level 5: Tertiary Education

Respondents who have a technical college or vocational college degree, master craftsmen or respondents with equivalent degrees, and respondents who have a university degree are classified at ISCED-Level 5.

Level 6: Second Stage of Tertiary Education (not implemented for ALLBUS)

ISCED-Level 6 would be reserved for respondents who have a research degree (e.g. a doctoral degree).

Mean: 36,983

Standard deviation: 11,8560

Derivation of data:

Occupational Prestige Scale

The occupational prestige scale is based on the ISCO-68 classification of occupations.

The prestige scores in this scale were derived from the results of empirical social research in various countries. Respondents in all participating countries were asked to evaluate a number of occupations according to relative prestige and social status. Based on these evaluations a scale of prestige scores with hypothetical extreme values of 0 and 100 was then created.

In general, respondents were assigned prestige scores according to the three digit ISCO-68 code of their occupation. When an appropriate ISCO code could not be determined, prestige scores were assigned according to the occupational minor group. When no appropriate occupational minor group could be determined, the mean prestige score of the occupational major group was assigned.

For further information on the prestige scale, compare:

Donald J. Treiman 1977: Occupational Prestige in Comparative Perspective, New York: Academic Press.

Standard deviation: 24,1490

Derivation of data:

Magnitudeprestige Scale (MPS) for ISCO-68 and ISCO-88

The Magnitudeprestige Scale was designed by Bernd Wegener specifically for the context of the Federal Republic of Germany. In contrast to Treiman's scale, which is based on verbal evaluations of relative social prestige, Wegener's scale is based on a psycho-physical method of measurement. Wegener asked respondents to give implicit ratio estimations of the relative magnitude of social prestige for a sample set of occupations. From these ratio estimations, Wegener then calculated a general scale of ordinal prestige scores. This MPS-scale describes a gradual mapping of social closure.

For further information, compare:

Bernd Wegener 1984: Gibt es Sozialprestige? Konstruktion und Validität der Magnitude-Prestigeskala, ZUMA Arbeitsbericht 84/02.

Bernd Wegener 1985: Gibt es Sozialprestige?, in: Zeitschrift für Soziologie 14: 209-235.

misei68 MOTHER: ISEI ISCO-68

Description of variable:

Classification of mother's occupation (ISCO 1968) according to the International Socio-Economic Index of Occupational Status (ISEI)

-34 Not included 2012-2016

-32 ISEI cannot be generated from ISCO-code, ISCO cannot be coded (code -33 in misco68)

-13 2000: No participation in ISSP

-10 Mother not working or no longer alive at the time (code -53, -54 in mdw02; 2000 ISSP: Code 2, 8 in V742 in ZA3450)

Comment:

N-Valid: 5285

N-Missing: 59204

Minimum: 10

Maximum: 90

Median: 39,00

Mean: 39,24

Standard deviation: 15,873

Derivation of data:

International Socio-Economic Index of Occupational Status (ISEI) for ISCO-68

In contrast to social prestige scales based on subjective evaluations of the relative social esteem of occupations, this index of socio-economic status was constructed using empirical data on the level of education and income related to a given occupation. The index scores were calculated for occupations coded according to ISCO-68.

Cases for which there was no valid ISCO-68 code, could not be assigned an ISEI score. These cases were coded as 'cannot be generated' (code -32).

mgld68 MOTHER: GOLDTHORPE CLASSES ISCO-68

Description of variable:

Classification of occupation according to the Goldthorpe class scheme:

Derived from information on the occupation of the mother

-34 Not included 2012-2016

-32 Insufficient occupational information for classification in class scheme

-13 2000: No participation in ISSP

-10 Mother not working or no longer alive at the time (code -54, -53 in mdw02)

-1 Not available 1980-2002

1 Higher and middle grades of the service class (higher grade professionals, administrators, officials and managers, large proprietors)

2 Lower grades of the service class

3 Non-manual employees with routine tasks (mainly clerical occupations, also sales occupations)

4 Proprietors, artisans etc. with 2-49 employees

5 Small proprietors, artisans etc. with one or no employees

6 Farmers (self-employed)

7 Technicians, supervisors of manual workers (foremen, master craftsmen)

8 Skilled workers

9 Unskilled and semi-skilled workers

10 Agricultural workers

11 Subdivision of class 3: Occupations without attachment to an organisational hierarchy and infrastructure. (This category was added when the class scheme was adapted to include women.)

12 Farmer on a cooperative farm

Derivation of data:

This classification was constructed using the information in mdw02 and misco68.

Note:

The Goldthorpe Class Scheme

The class scheme by Goldthorpe groups individuals on the basis of their occupation (ISCO-68) and their occupational position (reference number). By combining these two variables, 12 different class categories are constituted.

For further information, compare:

Petra Beckmann und Reiner Trometer 1991: Neue Dienstleistungen des ALLBUS : Haushalts- und Familientypologien, Klassenschema nach Goldthorpe, in: ZUMA Nachrichten 15(28): 7-17.

Maximum: 78

Median: 38,00

Mean: 37,91

Standard deviation: 11,561

Derivation of data:

Standard International Occupational Prestige Scale (SIOPS) for ISCO-88

The "Standard International Occupational Prestige Scale" is based on ISCO-88. It was conceived as an alternative prestige measure to Treiman's occupational prestige scale, which is based on ISCO-68.

Please be advised that there are as yet no SIOPS-scores for the incomplete codes and the general categories of ISCO-88. These cases were coded as -32 'cannot be generated'

For further information, compare:

Ganzeboom, Harry B. G. und Donald J. Treiman 1996: Internationally Comparable Measures of Occupational Status for the 1988 International Standard Classification of Occupations, in: Social Science Research 25(3): 201-239.

mmmps88 MOTHER: MAGNITUDEPRESTIGE ISCO-88

Description of variable:

Classification of mother's occupation (ISCO 1988) according to the Magnitudeprestige Scale (MPS)

-34 Not included 2012-2016

-32 MPS cannot be generated from ISCO-code, ISCO cannot be coded (code -33 in misco88)

-13 2000: No participation in ISSP

-10 Mother not working or no longer alive at the time (code -53, -54 in mdw02; 2000 ISSP: Code 2, 8 in V742 in ZA3450)

Standard deviation: 28,0011

Derivation of data:

Magnitudeprestige Scale (MPS) for ISCO-68 and ISCO-88

The Magnitudeprestige Scale was designed by Bernd Wegener specifically for the context of the Federal Republic of Germany. In contrast to Treiman's scale, which is based on verbal evaluations of relative social prestige, Wegener's scale is based on a psycho-physical method of measurement. Wegener asked respondents to give implicit ratio estimations of the relative magnitude of social prestige for a sample set of occupations. From these ratio estimations, Wegener then calculated a general scale of ordinal prestige scores. This MPS-scale describes a gradual mapping of social closure.

For further information, compare:

Bernd Wegener 1984: Gibt es Sozialprestige? Konstruktion und Validität der Magnitude-Prestigeskala, ZUMA Arbeitsbericht 84/02.

Derivation of data:

International Socio-Economic Index of Occupational Status (ISEI) for ISCO-88

In contrast to social prestige scales based on subjective evaluations of the relative social esteem of occupations, this index of socio-economic status was constructed using empirical data on the level of education and income related to a given occupation. The index scores were calculated for occupations coded according to ISCO-88.

Please be advised that there are as yet no ISEI-scores for the incomplete codes and the general categories of ISCO-88. These cases were coded as 'cannot be generated' (code -32).

Standard deviation: 12,31295

Derivation of data:

Standard International Occupational Prestige Scale (SIOPS) for ISCO-08

In order to generalize the "Standard International Occupational Prestige Scale" for ISCO-08, the original classification based on ISCO-88 was converted to ISCO-08 (Ganzeboom 2010). In contrast to ISEI, the construction of SIOPS is not based on a reference data set. Instead, the update to ISCO-08 is first and foremost an analytic operation. However, to generate SIOPS scores for aggregate ISCO-levels, weighting factors were needed. These weighting factors were constructed using the original set of data as described in Ganzeboom et al. (1992).

Please be advised that there are as yet no SIOPS-scores for the incomplete codes and the general categories of ISCO-08. These cases were coded as -32 'cannot be generated'.

Standard deviation: 19,39478

Derivation of data:

International Socio-Economic Index of Occupational Status (ISEI) for ISCO-08

With the introduction of ISCO-08, Harry B.G. Ganzeboom updated the derivation of ISEI-Scores. The procedure used to calculate ISEI scores for ISCO-08 generally followed the practice described for ISCO-68 and ISCO-88 in Ganzeboom et al. (1992, 1996, 2003). However, the ISEI scores for ISCO-88 are based on an updated and extended set of data. This set of data is a cumulation of all ISSP-modules surveyed between 2002 and 2007. It contains information for 42 countries and a total of 198.500 respondents. Whereas the data base for previous ISEI versions contained only information for male respondents, the updated database has information for respondents of both sexes. Additionally, Ganzeboom modified the way income data entered into the calculation. To account for the gender specific distribution of part-time work, income per hour was used instead of total income (Ganzeboom 2010a).

Please be advised that there are as yet no ISEI scores for the incomplete codes and the general categories of ISCO-88. These cases were coded as 'cannot be generated' (code -32).

dh09 REDUCED SIZE OF HOUSEHOLD

Description of variable:

Until 1990:

Number of adult Germans in the household (18 years and older)

From 1991:

Number of adult Germans and foreigners in the household (18 years and older)

-32 Cannot be generated

Derivation of data:

This variable contains information about the number of household members belonging to the ALLBUS population in the year of the survey. Until 1990, ALLBUS targeted all adult German citizens living in private households. As of 1991, adult foreign residents were also included in the target population. Due to differences in the sampling procedures, household samples and samples of individuals use different rules for who counts as an adult in the total population. With household samples, the person to be interviewed is only chosen at the time of the actual interview. Therefore, the ALLBUS household samples (1980-1992 and 1998) comprise all members of a given household who were at least 18 years old at the time of the interview. With samples of individuals (1994, 1996 and 2000-2016), on the other hand, the targeted respondents are chosen ahead of the actual interview. Consequently, ALLBUS samples of individuals use 1 January of the survey year as the deadline to determine whether an individual is to be regarded as an adult for the purpose of the sample.

Using slightly varying formulations, this data was surveyed directly in 1980, 1982, 1988 and 1990. In 1984, 1986 and as of 1991 the data was derived from the information provided in the list of household members. The difference in sampling procedures was taken into account.

dh05 HOUSEHOLD CLASSIFICATION, DETAILED

Description of variable:

Household classification (Porst), detailed

-32 Cannot be generated

Comment:

N-Valid: 63304

N-Missing: 1186

Minimum: 10

Maximum: 190

Note:

Household Classification, Detailed; Household Classification, Condensed; Family Typology

Variables dh05, dh07 and dh08 contain classifications of household and family structures. These classifications are based on the systematics introduced by Porst (1984), which was subsequently operationalized in an SPSS script by Funk (1989). It should be noted that Porst's systematics differs from the logic of other widely used classifications, e.g. the classification of life forms used by the Federal Statistical Office. Porst, for example, only classifies two-generation households as families if the parents are married or one of the parents has previously been married (comp. dh08). Thus, unmarried parents and their children or same sex couples with children are not classified as families. For a comparison of Porst's definition of 'family' and 'household' and the definitions used by the Federal Statistical Office compare Porst (1984). For an up-to date definition of relevant terms please refer to Statistisches Bundesamt (2013). Please also note that Porst's systematics is based on the data available in ALLBUS 1982. Since 1982, there have been a number of changes in the range of answer options available in the ALLBUS program for both the kinship relations within the household and the respondent's marital status. Two cases are relevant for Porst's classifications. Firstly, as of ALLBUS 1990 household members can be explicitly identified as step parents. In this case, Porst's classification rules have been amended such that step parents are treated in the same way as the category 'mother or father'. Secondly, answer options for same sex couples are included in the question on marital status since ALLBUS 2010. For Porst's classifications, these categories are treated analogous to the corresponding categories for heterosexual couples.

The variable dh05 contains a taxonomy of households based on the type of kinship relations between household members and the number of generations living together. It differentiates 32 different household constellations (e.g. unmarried singles living alone, married couples living with their unmarried children or complete three-generation households). Household types are furthermore differentiated by the respondent's generational position within the household - i.e. whether the respondent is, for example, parent or child - so that the classification comprises a total of 42 valid categories.

The variable dh07 groups the detailed data from dh05 into 9 general categories. The condensed classification differentiates between one-person households, one- to four-generation households, households of relatives with and without a family core and cohabiting groups with and without a family core.

Finally, dh08 contains Porst's typology of families, which derives its categories from the detailed household classification in dh05. Please note that this typology uses a very narrow definition of

family. Only three types of groups are considered families: a) married couples living with children or grand-children, b) three- and four-generation households (irrelevant of marital status within the generations) and c) married couples living with at least one other person (related or unrelated). The typology consists of 10 valid family-types differentiated by the number of generations living together, the completeness or incompleteness of the generational line and the presence of persons outside of the generational line within the household (e.g. cousins, nieces or unrelated persons).

For a comprehensive description of household- and family-types and a definition of terms like 'completeness' and 'incompleteness' please refer to Porst (1984).

'Appendix G' in the Variable Report provides a mapping of the categories in the detailed household classification to the categories of the family-typology.

Household Classification, Detailed; Household Classification, Condensed; Family Typology

Variables dh05, dh07 and dh08 contain classifications of household and family structures. These classifications are based on the systematics introduced by Porst (1984), which was subsequently operationalized in an SPSS script by Funk (1989). It should be noted that Porst's systematics differs from the logic of other widely used classifications, e.g. the classification of life forms used by the Federal Statistical Office. Porst, for example, only classifies two-generation households as families if the parents are married or one of the parents has previously been married (comp. dh08). Thus, unmarried parents and their children or same sex couples with children are not classified as families. For a comparison of Porst's definition of 'family' and 'household' and the definitions used by the Federal Statistical Office compare Porst (1984). For an up-to date definition of relevant terms please refer to Statistisches Bundesamt (2013). Please also note that Porst's systematics is based on the data available in ALLBUS 1982. Since 1982, there have been a number of changes in the range of answer options available in the ALLBUS program for both the kinship relations within the household and the respondent's marital status. Two cases are relevant for Porst's classifications. Firstly, as of ALLBUS 1990 household members can be explicitly identified as step parents. In this case, Porst's classification rules have been amended such that step parents are treated in the same way as the category 'mother or father'. Secondly, answer options for same sex couples are included in the question on marital status since ALLBUS 2010. For Porst's classifications, these categories are treated analogous to the corresponding categories for heterosexual couples.

The variable dh05 contains a taxonomy of households based on the type of kinship relations between household members and the number of generations living together. It differentiates 32 different household constellations (e.g. unmarried singles living alone, married couples living with their unmarried children or complete three-generation households). Household types are furthermore differentiated by the respondent's generational position within the household - i.e. whether the respondent is, for example, parent or child - so that the classification comprises a total of 42 valid categories.

The variable dh07 groups the detailed data from dh05 into 9 general categories. The condensed classification differentiates between one-person households, one- to four-generation households, households of relatives with and without a family core and cohabiting groups with and without a

family core.

Finally, dh08 contains Porst's typology of families, which derives its categories from the detailed household classification in dh05. Please note that this typology uses a very narrow definition of family. Only three types of groups are considered families: a) married couples living with children or grand-children, b) three- and four-generation households (irrelevant of marital status within the generations) and c) married couples living with at least one other person (related or unrelated). The typology consists of 10 valid family-types differentiated by the number of generations living together, the completeness or incompleteness of the generational line and the presence of persons outside of the generational line within the household (e.g. cousins, nieces or unrelated persons).

For a comprehensive description of household- and family-types and a definition of terms like 'completeness' and 'incompleteness' please refer to Porst (1984).

'Appendix G' in the Variable Report provides a mapping of the categories in the detailed household classification to the categories of the family-typology.

60 Composite family <"Haushaltsfamilie">

Note:

Household Classification, Detailed; Household Classification, Condensed; Family Typology

Variables dh05, dh07 and dh08 contain classifications of household and family structures. These classifications are based on the systematics introduced by Porst (1984), which was subsequently operationalized in an SPSS script by Funk (1989). It should be noted that Porst's systematics differs from the logic of other widely used classifications, e.g. the classification of life forms used by the Federal Statistical Office. Porst, for example, only classifies two-generation households as families if the parents are married or one of the parents has previously been married (comp. dh08). Thus, unmarried parents and their children or same sex couples with children are not classified as families. For a comparison of Porst's definition of 'family' and 'household' and the definitions used by the Federal Statistical Office compare Porst (1984). For an up-to date definition of relevant terms please refer to Statistisches Bundesamt (2013). Please also note that Porst's systematics is based on the data available in ALLBUS 1982. Since 1982, there have been a number of changes in the range of answer options available in the ALLBUS program for both the kinship relations within the household and the respondent's marital status. Two cases are relevant for Porst's classifications. Firstly, as of ALLBUS 1990 household members can be explicitly identified as step parents. In this case, Porst's classification rules have been amended such that step parents are treated in the same way as the category 'mother or father'. Secondly, answer options for same sex couples are included in the question on marital status since ALLBUS 2010. For Porst's classifications, these categories are treated analogous to the corresponding categories for heterosexual couples.

The variable dh05 contains a taxonomy of households based on the type of kinship relations between household members and the number of generations living together. It differentiates 32 different household constellations (e.g. unmarried singles living alone, married couples living with their unmarried children or complete three-generation households). Household types are furthermore differentiated by the respondent's generational position within the household - i.e. whether the respondent is, for example, parent or child - so that the classification comprises a total of 42 valid categories.

The variable dh07 groups the detailed data from dh05 into 9 general categories. The condensed classification differentiates between one-person households, one- to four-generation households,

households of relatives with and without a family core and cohabiting groups with and without a family core.

Finally, dh08 contains Porst's typology of families, which derives its categories from the detailed household classification in dh05. Please note that this typology uses a very narrow definition of family. Only three types of groups are considered families: a) married couples living with children or grand-children, b) three- and four-generation households (irrelevant of marital status within the generations) and c) married couples living with at least one other person (related or unrelated). The typology consists of 10 valid family-types differentiated by the number of generations living together, the completeness or incompleteness of the generational line and the presence of persons outside of the generational line within the household (e.g. cousins, nieces or unrelated persons).

For a comprehensive description of household- and family-types and a definition of terms like 'completeness' and 'incompleteness' please refer to Porst (1984).

'Appendix G' in the Variable Report provides a mapping of the categories in the detailed household classification to the categories of the family-typology.

dg13 DISTANCE TO LAST PLACE OF RESIDENCE

<If respondent has changed his/her place of residence at least one time>

Approximately how many kilometers away from your previous place of residence do you live?

(Int.: If respondent asks, please explain: Well, the place where you lived before you moved here.)

-10 Has lived in this place since birth (code 9000 in gd01)

-9 No answer

-8 Don't know

-7 Refused

-1 Not available 1982-1998, 2002-2008, 2012-2016

1 Less than 25 km

2 Between 26 and 50 km

3 Between 51 and 100 km

4 Between 101 and 200 km

5 More than 200 km

Derivation of data:

The surveys in 2000 and 2010 used a more differentiated answer scale than the original 1980 survey. To make the data comparable over time, the categories "between 200 and 500km" and "more than 500km" used in the later surveys were recoded into the original category "more than 200km" for this cumulative data set. Please refer to ALLBUS 2000 (ZA3450) and ALLBUS 2010 (ZA4610) for the more detailed data.

gd01 RESP.: HOW LONG HAVE YOU LIVED HERE?

How long have you lived in this town/city?

(Int.: Brief interruptions of residence in current place of residence (military service, higher education, training etc.) do not count as interruption of length of residence.)

(Int.: Record year.)

-9 No answer

-8 Don't know

-1 Not available 1984-1991, 1994-1998, 2002-2008, 2012-2016

9000 Since birth

Comment:

N-Valid: 15778

N-Missing: 48712

For the calculation of the measures below, code 9000 'Since birth' was treated as a missing value to avoid skewing the results:

Minimum: 1891

Maximum: 2010

Median: 1970,00

Mean: 1968,19

Standard deviation: 21,721

gd02 **LENGTH OF RESIDENCE IN YEARS**

Description of variable:

Length of residence - number of years

-9 No answer

-8 Don't know

-1 Not available 1984-1991, 1994-1998, 2002-2008, 2012-2016

0 Less than one year

Comment:

N-Valid: 15774

N-Missing: 48715

Minimum: 0

Maximum: 95

Median: 25,00

Mean: 28,42

Standard deviation: 19,896

Derivation of data:

The data in this variable was calculated from the data in gd01 RESP.: HOW LONG HAVE YOU LIVED HERE? and the year of the survey (year):

$$gd02 = year - gd01$$

When the code in gd01 was 'Since birth', gd02 was assigned the respondent's age (age). In ALLBUS 1992 there was no answer category 'Since birth' in gd01. Instead, age was assigned to gd02 when the year in gd01 equaled the year of birth in yborn. In both cases gd02 was coded as -32 'cannot be generated' when there was no valid data in age.

When there was no valid data in age or gd01, the number of years could not be calculated.

These cases were assigned the code -32 'cannot be generated'.

gs01 SELF-ASSESSMENT OF PLACE WHERE R LIVES

2000 (ISSP) and 2004 (ISSP):

Which of the following categories best describes the place where you live?

Please tick only one answer.

From 2006:

(Int.: Please display card.)

Which of the categories on this card best describes where you live?

Please tell me the appropriate letter.

-13 2000, 2004: No participation in ISSP

-9 No answer

-1 Not available 1980-1998, 2002

1 A Big city

2 B Suburbs or outskirts of a big city

3 C Small city or town

4 D Country village

5 E Farm or home in the country

Comment:

In 2000 and 2004, this question was part of the ISSP-modules surveyed together with ALLBUS.

As a rule ISSP-questions are not included in this cumulative data set. However, because the question documented here has also been part of the ALLBUS-interview several times, the ISSP-data was included in this data set. Please note that, in contrast to the ALLBUS interview, the ISSP-modules are surveyed as self-completion questionnaires.

splt80 SPLIT 1980: STIMULUS EXPERIMENT

Description of variable:

Split-Ballot: Stimulus Experiment

ALLBUS 1980 used a two group split-ballot design to test for the effect of stimulus variations on the responses to a number of questions. At three points during the interview, the wording of the questions each split-half received was varied. The following questions were part of the split experiment:

id01 - Fair share of standard of living: split 1 'your fair share of the good things in live' / split 2 'your fair share'

pc01-pc11 - Societal conflicts: split 1 'conflicts of interest' / split 2 'oppositions of interest'

case, caage, casn10, cawork, cadw01, casn12, cbsex, cbage, cbsn10, cbwork, cbdw01, cbsn12, ccsex, ccage, ccsn10, ccwork, ccdw01, ccsn12, sn19-sn21 - ego-centred networks, only the network generator was varied: in split 1 respondents were asked to name three "people you spend a lot of time with socially", while in split 2 respondents were asked to name "three people you think of as closer friends and whom you meet most frequently".

The variables listed above contain the data for both split-halves. The exact question wording used for the split versions is documented with each variable.

splt82 SPLIT 1982: STIMULUS EXPERIMENT

Description of variable:

Split-Ballot: Stimulus Experiment and Sequence Effects

ALLBUS 1982 used a two-group split-ballot design to test for sequence effects and the effect of stimulus variations. The two split versions of the questionnaire differed a) with regard to the position of the question on self-assessed religiousness within the module "Religion and World View" and b) with regard to the wording of the question texts and/or response scales used for a number of questions.

The following questions were part of the split experiment:

pa02a (split 1) / pa02b (split 2): political interest – different response scales

id02 (split 1 and split 2): self-assessment of social class – different response scales

fe01 – fe09 (split 1) / fe18 – fe30 (split 2): educational goals – different question wordings and response scale

ja01 – ja13 (split 1): work orientation

(split 2 with different question wordings and response scale not included in this data set)

rb02, rb04, rb06, ra01-ra03, ra05, rb07: "Religion and World View"

Split 1: A – item battery 'cosmologies' (b02, rb04, rb06) -> B – self-assessment of religiousness

(rb07) -> C – item battery 'meaning of life' (ra01-ra03, ra05)

Split 2: B – self-assessment of religiousness (rb07) -> A – item battery 'cosmologies' (rb02,

rb04, rb06) -> C – item battery 'meaning of life' (ra01-ra03, ra05)

The exact wording of the question texts and response scales used in the split versions is documented with each variable.

splt94 SPLIT 1994: GUESTWORKERS-FOREIGNERS

Description of variable:

Split-Ballot: "Guest workers"

ALLBUS 1994 used a two-group split-ballot design to test for the effect of stimulus variation with regard to the questions on attitudes towards and contacts with guest-workers. Split 1 used the established question wording, which refers to "guest workers". In Split 2 this designation was replaced by the phrase "the foreigners living in Germany".

The following questions were part of the split experiment:

ma01-ma04, mc01-mc04: attitudes towards and contact to foreigners

The variables listed above contain the data for both split-halves. The exact question wording used for the split versions is documented with each variable.

splt00 SPLIT 2000: ALTERNATE QUESTIONS

Description of variable:

Split-Ballot: Alternate Questions

ALLBUS 2000 used a two-group split-ballot design to increase the total number of questions surveyed, i.e. each split-version of the questionnaire contained a number of alternate questions only surveyed in one split-half.

Please note that the split-ballot design was only used for the CAPI-survey. The PAPI-survey contained the questions fielded with CAPI-Split 1 as well as those fielded with CAPI-Split 2.

Questions only included in CAPI-split 1:

pa03-pa04: party preference

pp01-pp04: political participation

vm01-vm07: abortion

ca01-ca13: evaluation of deviant behavior

ca15-ca20: prohibition of deviant behavior

cs01-cs09: self-reported deviant behavior

cp01-cp04: assessed likelihood of discovery of deviant behavior

ca21: importance of punishment

ce01: personal victimization

ca22: compliance with laws

ca23: deterrence by punishment

Questions only included in CAPI-split 2:

pr01-pr10: attitudes towards German reunification

lg01: personal ambitions in life realized?

im01: assessment of access to education

im02-im13: perceived prerequisites for success in society

pt01-pt14, pt16-pt18: trust in public institutions and organisations

pt19-pt21: trust in European institutions

pn01-pn10: things one can be proud of as a German

pn11: pride in being a German

mi01-mi04: attitude towards immigration of foreigners

ma01-ma04, mc01-mc04: attitude towards and contacts with foreigners

pn12-pn17: identification with municipality, federal state, Germany, European Union

splt10 SPLIT 2010: NETWORKS

Description of variable:

Split-Ballot: Network Generator

A major part of ALLBUS 2010 was devoted to collecting ego-centred network data. A two-group split-ballot design was used to test two different network generators. Split 1 received the network generator that had previously been used in the ALLBUS program in 1980, 1990 and 2000. Respondents were asked to name the three people they spend the most time with socially. The wording of the network generator used in split 2 was based on a question used in the General Social Survey (GSS). In split 2, respondents were asked to name five people with whom they had talked about important matters over the last six months. As split 2 has not been replicated since 2010, only the data from split 1 is part of this cumulated data set. If you are interested in the data from split 2, please refer to the cross-sectional data set (V162-V297 in ZA4610).

Split 1 (ALLBUS generator): casex-sn21

Split 2 (GSS-type generator): not part of this data set

splt12_1 SPLIT 2012: ABORTION

Description of variable:

Split-Ballot: Abortion

ALLBUS 2012 used a two-group split-ballot design to test an updated item battery on attitudes towards abortion. The respondents in split 1 received the established item battery asking whether abortion should be legally permitted under various circumstances or not. In split 2, respondents were similarly asked if abortion should be legal under a number of circumstances. However, the updated question used a more differentiated response scale giving respondents the option to qualify their support for abortion taking into account how far into the pregnancy the supposed abortion would take place. As the questions in split 2 have not been replicated yet, they are not part of this data set. The relevant data can instead be found in V43 to V40 in ZA4614.

Split 1: vm01-vm07

Split 2: not included (please refer to V43-V50 in ZA4614)

For further information, compare:

splt12_2 SPLIT 2012: ROLE OF WOMEN

Description of variable:

Split-Ballot: Gender Roles

ALLBUS 2012 used a two-group split-ballot design to test an updated item battery on gender roles in the context of work and family life.

Split 1 replicated a question battery that has been surveyed numerous times in the ALLBUS program since 1982 (fr01, fr02, fr03a, fr04a, fr05a, fr06). This battery consists of three items on the proper role of men and women in the family and three items on the perceived consequences of female participation in the work force. In all six items respondents are asked in how far they agree with conservative positions.

Respondents in split 2 received an updated and extended item battery, which consisted of ten questions. For the new item battery, the wording of the established items was modified so as to reflect the changed position of women in contemporary working life. Moreover, four new items were added. These new items were designed to represent non-traditional gender roles and explicitly address the role of men in the family.

The data of each split-half has been stored in separate variables.

Split 1: fr01, fr02, fr03a, fr04a, fr05a, fr06

Split 2: fr07, fr08, fr03b, fr04b, fr05b, fr09-fr12

splt12_3 SPLIT 2012: CHURCH ATTENDANCE

Description of variable:

Split-Ballot: 'Frequency of Church Attendance'

ALLBUS 2012 used a two-group split-ballot design to test an alternative wording for the question on frequency of church attendance during childhood. Split 1 replicated a wording also used in other questions on church attendance in the ALLBUS-program. Respondents were asked how often they 'went to church' when they were a child. In split 2 respondents were instead asked how often they 'attended a church service' when they were a child.

For this cumulated data set, the data from both split-halves has been consolidated into a single variable (rp03).

splt14_1 SPLIT 2014: OCCUPATIONAL SUCCESS

Description of variable:

Split-Ballot: Comparison of Occupational Success

ALLBUS 2014 used a two-group split-ballot design to test for the effect of different response scales with regard to the question on relative occupational status compared to the respondent's mother and father. Respondents in both split-halves were asked to evaluate their own occupational status in comparison to that of their mother and their father. Respondents in split 1 received the four-point scale previously used in the ALLBUS-program. The response options were: "much higher", "somewhat higher", "roughly the same" and "lower". Respondents in split 2 received a five-point scale which differentiated the category "lower" into two categories "somewhat lower" and "much lower".

The split-ballot experiment showed that the different response scales did not have a statistically significant effect on response behaviour. For this cumulated data set, the data from both split-halves was therefore merged in a single variable (di04). To this end, the categories "somewhat lower" and "much lower" from split 2 were recoded to "lower".

Please note that only the question referring to the occupational status of the respondent's father is included in this data set, because the question referring to the mother's occupational status has not been replicated yet.

splt14_2 SPLIT 2014: ALTERNATE QUESTIONS

Description of variable:

Split-Ballot: Alternate Questions

ALLBUS 2014 used a two-group split-ballot design to increase the total number of questions surveyed, i.e. each split-version of the questionnaire contained a number of alternate questions only surveyed in one split-half. Split 1 contained a previously surveyed item battery on 'perceived prerequisites for success in society', whereas split 2 fielded a newly developed item battery on 'dimensions of social justice'.

As the questions on 'dimensions of social justice' have not been replicated yet, only the item battery on 'perceived prerequisites for success in society' is part of this cumulated data set.

Split 1: im02-im12

splt14_3 SPLIT 2014: HEALTH OF RESPONDENT

Description of variable:

Split-Ballot: Health of Respondent

ALLBUS 2014 used a two-group split-ballot design to test for the effect of different response scales with regard to the question on the respondents' health. Respondents in both split-halves were asked to evaluate their general state of health. Respondents in split 1 received the five-point scale previously used in the ALLBUS-program. The response options were: "very good", "good", "satisfactory", "not that good" and "bad". Respondents in split 2 received a six-point scale which extended the positive end of the scale to include the option "excellent".

As the question used in split 2 has not been replicated so far, it has not been included in this data set. The relevant data can instead be found in V226 in ZA4614.

Split 1 – state of health (five-point response scale): hs01

Split 2 – state of health (six-point response scale): not included (please refer to V226 in ZA5240)

splt16_1 SPLIT 2016: FR01-FR12

Description of variable:

Split ballot: fr01-fr12 (alternate questions)

ALLBUS 2016 used a two-group split-ballot design to increase the total number of questions surveyed. Each split-version of the questionnaire contained a different set of questions on gender roles in the context of work and family life.

Split 1 replicated a question battery that has been surveyed numerous times in the ALLBUS program since 1982 (fr01, fr02, fr03a, fr04a, fr05a, fr06). This battery consists of three items on the proper role of men and women in the family and three items on the perceived consequences of female participation in the work force. In all six items respondents are asked in how far they agree with conservative positions.

Split 2 replicated 9 items of a 10 item battery originally fielded in ALLBUS 2012 (fr07, fr08, fr03b, fr04b, fr05b, fr09-fr12). While often asking about similar issues as the older question battery, the wording of the items in the newer battery has been updated so as to reflect the changed position of women in contemporary working life. Moreover, the battery in split 2 additionally includes three new items that focus on non-traditional positions by explicitly addressing the role of men in family life.

The data of each split-half has been stored in separate variables.

splt16_2 SPLIT 2016: MI01-MI04

Description of variable:

Split ballot: mi01-mi04 (alternate questions)

ALLBUS 2016 used a two-group split-ballot design to increase the total number of questions surveyed in the focus module on 'Attitudes towards ethnic groups in Germany'.

Both split-halves contained the same question on respondents' attitudes towards the influx of different groups of persons into Germany. While both splits used the same basic question, the splits differed in the type of groups respondents were asked about. Split 1 replicated a list of groups that has already been surveyed several times in the ALLBUS program. Respondents in split 1 were asked about: ethnic Germans from Eastern Europe, asylum seekers, migrants from EU countries and migrants from non-EU countries. Split 2 used an updated list of groups that focused more on why people come to Germany than on their geographic origin. This list comprised: different types of refugees (political, economic, refugees of war), different types of workers (from Eastern European EU countries, from other EU countries, from non-EU countries) and spouses or children who come to join their family members already living in Germany. As split 2 has not been replicated yet, the corresponding data is not part of this data set. Please refer to ZA5250 instead.

Split 1: mi01 to mi04

Split 2: not included (mi05 to mi11 in ZA5250)

splt16_3 SPLIT 2016: MA01-MA04

Description of variable:

Split ballot: ma01-ma04 (context effects)

ALLBUS 2016 used a two-group split-ballot design to test for context effects when surveying a four item question battery on attitudes towards foreigners living in Germany (ma01-ma04).

Each of the two split versions fielded used a slightly different wording for the introductory item.

The rest of the battery was identical in both split halves. Split 1 fielded the wording used in previous ALLBUS surveys. Respondents were asked to react to the statement "Foreigners living in Germany should adapt their way of life a little more closely to the German way of life". Split 2 used a slightly stronger wording without the qualifier 'a little': "Foreigners living in Germany should adapt their way of life more closely to the German way of life".

For this cumulated data set, the data from both split halves has been consolidated into one variable (ma01-ma04).

-10 No German citizenship (code 3 in german)

splt16_4 SPLIT 2016: MN01-MN09

Description of variable:

Split ballot: mn01-mn09 (alternate questions)

ALLBUS 2016 used a two-group split-ballot design to increase the total number of questions surveyed in the focus module on 'Attitudes towards ethnic groups in Germany'. The two split versions each fielded a different question on the topic 'being German'.

Split 1 replicated a question battery previously surveyed in 1996 and 2006, which asked about criteria for naturalization as a German citizen (mn01-mn09). Split 2 fielded a newly developed set of questions asking in how far migrants could become 'real Germans' (mn10) and what it would take for them to be regarded as such (mn10-mn21). In contrast to the older questions, which focused on the, arguably more bureaucratic, issue of citizenship, the newly developed set of questions aims at the prerequisites and possibility of a true, cultural integration of migrants. As the questions from split 2 have not been replicated yet, they have not been included in this data set. The relevant data can instead be found in mn10 and mn11-mn21 in ZA5250.

Split 1: mn01 to mn09

Split 2: not included (please refer to mn10, mn11-mn21 in ZA5250)

-1 Not available 1980-2014

splt16_5 SPLIT 2016: MP15A

Description of variable:

Split ballot: mp15a (alternate wording)

ALBUS 2016 used a two-group split-ballot design to test different versions of a question on the estimated percentage of foreigners living in the respondents' neighbourhood.

Split 1 fielded a closed question previously used in ALLBUS 1996 and 2006. Respondents were asked to choose one of four verbal descriptions of the relative proportion of foreigners in the neighbourhood. Split 2 fielded an open question asking respondents to give an estimate in percentage points.

As the question used in split 2 has not been replicated yet, it has not been included in this data set. The relevant data can instead be found in mp15b in ZA5250.

Split 1: mp15a

Split 2: not included (please refer to mp15b in ZA5250)

ALLBUS/GGSScompact 1980-2016: Variable Report

GESIS Study No. 4589 (v1.0.0), <http://dx.doi.org/10.4232/1.13335>

splt16_6 SPLIT 2016: MG13-17, MG19-23

Description of variable:

Split ballot: mg13-17, mg19-23 (alternate questions)

ALLBUS 2016 used a two-group split-ballot design to increase the total number of questions surveyed in the focus module on 'Attitudes towards ethnic groups in Germany'. The two split versions each fielded a question battery on a different topic.

Split 1 contained a question on social distance. Respondents were asked to indicate how they felt about members of different groups marrying into their own family. Split 2 contained a question on legal equality for foreigners. Here, respondents were asked to indicate whether different groups of people should enjoy 'the same rights as Germans in every respect'. Both questions had previously been surveyed in ALLBUS 1996 and ALLBUS 2006. As in these previous surveys, respondents were asked in each case to answer with respect to Italians, ethnic Germans from Eastern Europe, Turks and Jews. In ALLBUS 2016 the list of groups was extended to include Poles. As the questions regarding Poles have not been replicated yet, they are not part of this dataset. Instead they can be found in mg18 and mg24 in ZA5250.

Split 1: mg13-mg17 (not included mg18, please refer to ZA5250)

Split 2: mg19-mg23 (not included mg24, please refer to ZA5250)

gkpol POLITICAL SIZE OF MUNICIPALITY

Description of variable:

Size of municipality

-34 Not included 1991 (West), not included for reasons of data protection

1 Up to 1,999 residents

2 2,000 - 4,999 residents

3 5,000 - 19,999 residents

4 20,000 - 49,999 residents

5 50,000 - 99,999 residents

6 100,000 residents and more <code 6 and 7 in ZA4588>

Derivation of data:

Cases deemed sensitive for reasons of data protection were recoded to -34 'Not included'.

The data in this variable was additionally coarsened to meet the data protection requirements for ALLBUS/GGSScompact. The full range of data for this variable is available in the scientific use file ALLBUS/GGSS 1980-2016 (Study No. 4588).

Note:

Political Size of Municipality

Size of Municipality categorizes the respondents' places of residence according to their number of inhabitants. For reasons of data protection uncategorized data of this kind cannot be published. The categorization of respondents' places of residence is based on information about the places' size as political/administrative units. Because political or administrative units are in many cases unsuitable to accurately describe the type of community in which respondents actually live, ALLBUS also provides more sophisticated geographical classifications (compare bstdt07, bstdt10, gs05, bik).

capipapi INTERVIEW: CAPI OR PAPI?

Description of variable:

Interviewing method used for the ALLBUS-survey

- 1 PAPI (Paper and Pencil Interviewing)
- 2 CAPI (Computer Assisted Personal Interviewing)

Comment:

While ALLBUS 2006 is classified as a CAPI-Survey here, part of the respondents were asked to fill in their responses to a number of items themselves (CASI - Computer Assisted Self-Interviewing). For information as to which variables are concerned please refer to spl06.

wghtpt **WEIGHT: TRANSFORM TO PERSON-LEVEL**

Description of variable:

Transformation weight for person-related analyses:

Transforms household samples to person-level.

0 Cannot be calculated

1 Respondents from a sample of individuals (1994, 1996, 2000-2014: code 2 in samptype) - transformation weight not applicable

Comment:

N-Valid: 64489

N-Missing: 0

Minimum: ,48878244293465

Maximum: 4,60310965630112

Note:

Transformation of Household Sample Data to Person-Level Data

From 1980 to 1992 and in 1998, the ALLBUS data was surveyed based on a sample of households. Therefore, analyses of this data involving the characteristics of individuals (attitudes, demographic attributes, etc.) should in principle be weighted using a transformation weight that adjusts for the effect of household size on the probability of selection for each respondent. A transformation weight suitable for analyses treating East and West Germany separately is provided in wghtpt.

Person-level analyses of data from household samples that target Germany as a whole must additionally address the oversampling of East German respondents from 1991 onwards. The appropriate weighting factors are calculated as the product of the transformation weight in wghtpt and the person-level East-West-weight in wghtpew. The combined weight is wghtptew. Because the effects of household size on the composition of the sample are often minimized by conditions in the field - the higher selection probability of one-person households, for example, is often offset by the fact that these households are harder to contact - transformation weighting can often be neglected. However, it is always good advice to compare the results of unweighted and weighted analyses to check for any major deviations.

Application of weights:

Analysis of person-related data:

- separate for East and West Germany: wghtpt
- Germany as a whole: wghtptew

Analysis of household-related data:

- separate for East and West Germany: wghtht
- Germany as a whole: wghthtew

wghtpew WEIGHT: EAST-WEST, PERSON-LEVEL

Description of variable:

Weight for East German oversample, person-related:

Adjusts for the oversample of East German respondents, for person-related analyses of the German population as a whole; use with data from person samples (1994, 1996, from 2000)

Comment:

N-Valid: 64489

N-Missing: 0

Minimum: ,375278576907802

Maximum: 1,637100315227460

Note:

Weights Adjusting for the Oversample of Respondents from East Germany

Applying the East-West-weight in wghtpew adjusts for the overrepresentation of respondents from East Germany in the ALLBUS surveys using person samples (1994, 1996, 2000 and following), i.e. it obviates the need to perform separate analyses for the Western and Eastern subsample. Please note that data from samples of households (1980-1992, 1998) is not transformed to person-level data.

Please also refer to the notes for wghtpt, wghtptew and wghtht, wghthtew.

wghtptew WEIGHT: E-W+TRANSF. TO PERSON-LEVEL

Description of variable:

Combined weight for person-related analyses of the German population as a whole:

- transforms household samples to person-level
- adjusts for the East German oversample

0 Cannot be calculated

Comment:

N-Valid: 64489

N-Missing: 0

Minimum: ,18479346903083

Maximum: 4,84683800027865

Note:

Transformation of Household Sample Data to Person-Level Data

From 1980 to 1992 and in 1998, the ALLBUS data was surveyed based on a sample of households. Therefore, analyses of this data involving the characteristics of individuals (attitudes, demographic attributes, etc.) should in principle be weighted using a transformation weight that adjusts for the effect of household size on the probability of selection for each respondent. A transformation weight suitable for analyses treating East and West Germany separately is provided in wghtpt.

Person-level analyses of data from household samples that target Germany as a whole must additionally address the oversampling of East German respondents from 1991 onwards. The appropriate weighting factors are calculated as the product of the transformation weight in wghtpt and the person-level East-West-weight in wghtpew. The combined weight is wghtptew. Because the effects of household size on the composition of the sample are often minimized by conditions in the field - the higher selection probability of one-person households, for example, is often offset by the fact that these households are harder to contact - transformation weighting can often be neglected. However, it is always good advice to compare the results of unweighted and weighted analyses to check for any major deviations.

Application of weights:

Analysis of person-related data:

- separate for East and West Germany: wghtpt
- Germany as a whole: wghtptew

Analysis of household-related data:

- separate for East and West Germany: wghtht
- Germany as a whole: wghthtew

wghtht **WEIGHT: TRANSFORM TO HOUSEHOLD-LEVEL**

Description of variable:

Transformation weight for analyses on household-level:

Transforms data from person samples to household-level

Only separate analyses for East and West Germany permissible.

0 Cannot be calculated

1 Respondents from a sample of households (1980-1992, 1998: code 1 in samptype) -
transformation weight not applicable

Comment:

N-Valid: 64489

N-Missing: 0

Minimum: 0,0000000000000000

Maximum: 1,862775536000000

Note:

Transformation of Person Sample Data to Household-Level Data

The ALLBUS surveys in 1994 and 1996 and those in 2000 and following years were conducted on the basis of a person sample. These samples show a design bias favouring larger households and must consequently be weighted when performing analyses targeting household-level attributes like household income, etc. For separate analyses of the East and West German subsamples please use wghtht. Household-level analyses of the sample as a whole should be weighted by wghthtew, which also adjusts for the overrepresentation of East German respondents. The weighting factors in wghthtew are calculated as the product of wghtht (transformation weight) and wghthew (household-level East-West-weight).

The household-level East-West-weight wghthew can also be used if only data from samples of households is concerned (ALLBUS 1980 to 1992 and ALLBUS 1998). The weighting factors will adjust for the overrepresentation of East German households so that the data can be treated as representative of total Germany.

Application of weights:

Analysis of person-related data:

- separate for East and West Germany: wghtpt
- Germany as a whole: wghtptew

Analysis of household-related data:

- separate for East and West Germany: wghtht
- Germany as a whole: wghthtew

Appendix

Appendix A – Memberships

Appendix A – Memberships

The following table contains an overview of the information on memberships in organisations and associations collected between 1980 and 1998.

The cells in the year columns contain the item identification on the list used in the survey.

Different colors indicate the different question texts used over the years.

"Are you personally a current member of an organisation or club?"												
"Are you currently a member of a trade union, a professional organisation or an employer's association?"												
Are you currently a member of an organisation or a club?												
Are you currently a member of a trade union? (Yes/No)												
Please tell me what you are a member of.												
Are you currently a member of a political party?

Appendix B – Occupational Training

Appendix B – Occupational Training

Over the years, occupational training has been surveyed in the ALLBUS program using both single response and multiple response questions:

- In ALLBUS 1980 to ALLBUS 1984 single response questions were used and the respondent was asked for the LAST completed occupational training (of the respondent, their spouse, etc.)
- From 1986 onwards, occupational training has been surveyed using multiple response questions and respondents were asked to indicate all occupational training certificates obtained.
- Starting with ALLBUS 2006, a single response question is once again used to survey the occupational training of the respondent's mother and father. This question asks for the HIGHEST occupational training certificate.

For the cumulated data set, all available data on occupational training has been consolidated and coded in two alternative ways. Firstly, a variable was created that contains the *highest* or *last* occupational training that the respective person completed:

Variable	Person
de01	Respondent
scde01	Respondent's current spouse
sfde01	Respondent's former spouse
pde01	Respondent's steady partner
fde01	Respondent's father
mde01	Respondent's mother

Secondly, all information on occupational training was stored in twelve dichotomous variables. These twelve dummy variables contain the *highest* or *last* occupational training certificate for all years in which a single response question was fielded, and *all* selected occupational training certificates for the years in which a multiple response question was used.

Variables	Person
de05-de16	Respondent
scde05-scde16	Respondent's current spouse
sfde05-sfde16	Respondent's former spouse
pde05-pde16	Respondent's partner
fde05-fde16	Respondent's father
mde05-mde16	Respondent's mother

While the range of qualifications surveyed has remained unchanged as of ALLBUS 1992, the list of response options respondents were asked to choose from was expanded and differentiated in 1986 and 1991. To consolidate the data, a coding scheme was created that includes all occupational training certificates surveyed in ALLBUS (comp. table 1). Using this coding scheme, the data from the single response questions was subsequently coded uniformly for all persons and years. Based on the aggregate list of response options, a hierarchy of qualifications was then created that was used to determine the highest occupational training certificate of the respective person for the years in which a multiple response question was used. The ranking of qualifications is based primarily on the length of training and the degree of academization. However, a special case presented itself with the category 'other vocational training certificate'. Because there is no way of knowing what qualification has been obtained, there is no obvious way of inserting this answer into the hierarchy of qualifications. As a pragmatic solution, the category 'other vocational training certificate' was ranked as the lowest occupational training certificate. If any other occupational training certificate was selected additionally to the option 'other vocational training certificate', this other qualification was coded instead. Finally, if the respondent did not answer the multiple response question, the value -32 "cannot be generated" was coded.

Table 1: Hierarchy of occupational training certificates

	Occupational training	Code
low	No completed vocational training	1
	Other vocational training certificate	50
	On-the-job vocational training with final certificate, but not within traineeship or apprenticeship scheme	2
	Work placement, internship	3
	Compact vocational training course	4
	Completed trades, crafts or agricultural apprenticeship	5
	Completed commercial apprenticeship	6
	Specialized vocational college certificate	7
	Technical or vocational college certificate	8
	Master (craftsman), technician or equivalent college certificate	9
	University of Applied Sciences degree (or engineering college degree)	10
high	University degree	11

The wording used to describe the qualifications in table 1 has remained more or less the same over the years.¹ However, for some items, the wording was changed slightly with the switch to the multiple response question in 1986:

- Before 1986 category 1 'no completed vocational training' explicitly included 'vocational school without apprenticeship'.

¹ The precise wording of items used in each survey is documented in the variable report for the original German language version of this dataset (ZA4586).

- Similarly, the category 'completed commercial apprenticeship' was surveyed as 'completed commercial or other apprenticeship' before 1986.

More importantly perhaps, new screening rules were introduced with the multiple response question:

- As of 1986, persons who were still at school have been screened out for the question on occupational training. From 1980 to 1984, however, no such screening was used. Consequently the percentage of cases coded to 'no completed training' is noticeably higher in the data for 1980 to 1984.

Finally, additional response options were introduced both with the switch to the multiple response format in 1986 and with the first ALLBUS survey in unified Germany in 1991:

- In 1986 the options 'on-the-job training' and 'other vocational training certificate' were added.
- The 1991 survey also introduced two additional response options: 'compact vocational training course' and 'specialized vocational college certificate'. As these qualifications were specific to the East German educational system, they were only used in the new federal states in 1991. Similarly, only respondents in the old federal states were offered the options 'technical or vocational college certificate' and 'master (craftsman), technician or equivalent college certificate', which were specific to the West German system. However, this practice remained unique for ALLBUS 1991. Starting with ALLBUS 1992 a uniform list including the additional East German qualifications has been used in both the new and old federal states.

1.1 Respondent

The occupational training certificate of the respondent (de01, de05-de16) was surveyed as a single response question from 1980 to 1984 and as a multiple response question from 1986 onwards.

Deviating from the practice as of 1986, school students were not screened out in the single response question from 1980 to 1984. When reconstructing the single response question with the data from the multiple response question, cases that were originally screened out because the respondent was still a student (code 7 in educ) were coded as 1 'no completed vocational training' to ensure that the data is comparable over the years. Note however, that, when constructing the dummy variables for the data from 1980 to 1984, screening could not be similarly harmonized, i.e. students could not be screened out retroactively.

Table 2: Respondent's occupational training (de01, de05-de16) by year

	1980	1982	1984	1986	1988	1990	1991	from 1992

 Single response question

 Multiple response question

1.2 Current spouse

The occupational training certificate of the respondent's current spouse (scde01, scde05-scde16) was surveyed as a single response question from 1980 to 1984 and as a multiple response question from 1988 onwards.

Deviating from the practice as of 1986, school students were not screened out in the single response question from 1980 to 1984. When reconstructing the single response question with the data from the multiple response question, cases that were originally screened out because the respondent was still a student (code 7 in educ) were coded as 1 'no completed vocational training' to ensure that the data is comparable over the years. Note however, that, when constructing the dummy variables for the data from 1980 to 1984, screening could not be similarly harmonized, i.e. students could not be screened out retroactively.

Table 3: Occupational training of the respondent's current spouse (scde01, scde05-scde16) by year

	1980-1984	1986	1988	1990	1991	from 1992

11 University	X		X	X	X	X
50 Other vocational training certificate			X	X	X	X

Single response question

Multiple response question

1.3 Former spouse

The occupational training certificate of the respondent's former spouse (sfde01, sfde05-sfde16) was surveyed as a single response question from 1980 to 1984 and as a multiple response question in 1988.

Deviating from the practice as of 1986, school students were not screened out in the single response question from 1980 to 1984. When reconstructing the single response question with the data from the multiple response question, cases that were originally screened out because the respondent was still a student (code 7 in educ) were coded as 1 'no completed vocational training' to ensure that the data is comparable over the years. Note however, that, when constructing the dummy variables for the data from 1980 to 1984, screening could not be similarly harmonized, i.e. students could not be screened out retroactively.

Table 4: Occupational training of the respondent's former spouse (sfde01, sfde05-sfde16) by year

	1980	1982	1984	1986	1988	from 1990
1 No completed vocational training	X	X	X		X	
2 On-the-job vocational training					X

11 University	X	X	X		X	
50 Other vocational training certificate					X	

Single response question

Multiple response question

1.4 Partner

The occupational training of the respondent's steady partner (pde01, pde05-pde16) has been surveyed exclusively as a multiple response question. Consequently, all of the data in pde01 PARTNER: OCCUPATIONAL TRAINING was constructed from the multiple response data.

Deviating from the practice as of 1986, school students were not screened out in the single response question from 1980 to 1984. Therefore, when reconstructing the data in pde01 with the data from the multiple response question, cases that were originally screened out because the respondent was still a student (code 7 in educ) were coded as 1 'no completed vocational training' to ensure that the data is comparable over the years.

Table 5: Occupational training of the respondent's steady partner (pde01, pde05-pde16) by year

	1980-1986	1988	1990	1991	from 1992

11 University		X	X	X	X
50 Other vocational training certificate		X	X	X	X

 Single response question

 Multiple response question

1.5 Father

The occupational training of the respondent's father (fde01, fde05-fde16) was surveyed as a single response question in 1984 and from 2006 to 2016. In 1984 the question asked for the *last* certificate obtained whereas in 2006 to 2016 respondents were asked to indicate the *highest* certificate. In 1986 to 1990 as well as in 1994 and 2004 a multiple response question was used asking for all occupational qualifications.

Table 6: Occupational training of the respondent's father (fde01, fde05-fde16) by year

	1980	1982	1984	1986	1988	1990
1 No completed vocational training			X	X	X	X

50 Other vocational training certificate			X		X	X

 Single response question
  Multiple response question

1.6 Mother

The occupational training of the respondent's mother (mde01, mde05-mde16) was surveyed as a single response question in 1984 and from 2006 to 2016. In 1984 the question asked for the mother's *last* certificate whereas in 2006 to 2016 it asked for the *highest* certificate. In 1986 to 1990, 1994 and 2004 a multiple response question was used asking for all occupational qualifications.

Table 7: Occupational training of the respondent's mother (mde01, mde05-mde16) by year

	1980	1982	1984	1986	1988	1990

612 Specialised farmers

621 General farm workers (including cooperative farmers)

622 Field crop and vegetable farm workers

623 Orchard, vineyard and related tree and shrub crop workers

624 Livestock workers

625 Dairy farm workers

626 Poultry farm workers

627 Nursery workers and gardeners

628 Farm machinery operators

629 Agricultural and animal husbandry workers, n.e.c.

- 631 Loggers
- 632 Forestry workers (except logging)
- 641 Fishermen
- 649 Fishermen, hunters and related workers, n.e.c.

Production and related workers, transport equipment operators and labourers

- 700 Production supervisors and general foremen
- 711 Miners and quarrymen
- 712 Mineral and stone treaters
- 713 Well drillers, borers and related workers
- 721 Metal smelting, converting and refining furnacemen
- 722 Metal rolling-mill workers
- 723 Metal melters and reheaters
- 724 Metal casters
- 725 Metal moulders and coremakers
- 726 Metal annealers, temperers and case-hardeners
- 727 Metal drawers and extruders
- 728 Metal platers and coaters
- 729 Metal processors, n.e.c.
- 731 Wood treaters
- 732 Sawyers, plywood makers and related wood-processing workers
- 733 Paper pulp preparers
- 734 Paper makers
- 741 Crushers, grinders and mixers
- 742 Cookers, roasters and related heat-treaters
- 743 Filter and separator operators
- 744 Still and reactor operators
- 745 Petroleum-refining workers
- 749 Chemical processors and related workers, n.e.c.
- 751 Fibre preparers
- 752 Spinners and winders
- 753 Weaving- and knitting-machine setters and pattern-card preparers
- 754 Weavers and related workers
- 755 Knitters

-
- 756 Bleachers, dyers and textile product finishers
 - 759 Spinners, weavers, knitters, dyers and related workers, n.e.c.
 - 761 Tanners and fellmongers
 - 762 Pelt dressers
 - 771 Grain millers and related workers
 - 772 Sugar processors and refiners
 - 773 Butchers and meat preparers
 - 774 Food preservers
 - 775 Dairy product processors
 - 776 Bakers, pastrycooks and confectionery makers
 - 777 Tea, coffee and cocoa preparers
 - 778 Brewers, wine and beverage makers
 - 779 Food and beverage processors, n.e.c.
 - 781 Tobacco preparers
 - 782 Cigar makers
 - 783 Cigarette makers
 - 789 Tobacco preparers and tobacco product makers, n.e.c.
 - 791 Tailors and dressmakers
 - 792 Fur tailors and related workers
 - 793 Milliners and hatmakers
 - 794 Patternmakers and cutters
 - 795 Sewers and embroiderers
 - 796 Upholsterers and related workers
 - 799 Tailors, dressmakers, sewers, upholsterers and related workers, n.e.c.
 - 801 Shoemakers and shoe repairers
 - 802 Shoe cutters, lasters, sewers and related workers
 - 803 Leather goods makers
 - 811 Cabinetmakers
 - 812 Woodworking-machine operators
 - 819 Cabinetmakers and related woodworkers, n.e.c.
 - 820 Stone cutters and carvers
 - 831 Blacksmiths, hammersmiths and forging-press operators
 - 832 Toolmakers, metal patternmakers and metal markers
 - 833 Machine-tool setter-operators

- 834 Machine-tool operators
- 835 Metal grinders, polishers and tool sharpeners
- 839 Blacksmiths, toolmakers and machine-tool operators, n.e.c.
- 841 Machinery fitters and machine assemblers
- 842 Watch, clock and precision instrument makers
- 843 Motor vehicle mechanics
- 844 Aircraft engine mechanics
- 849 Machinery fitters, machine assemblers and precision instrument makers (except electrical), n.e.c.
- 851 Electrical fitters
- 852 Electronics fitters
- 853 Electrical and electronic equipment assemblers
- 854 Radio and television repairmen
- 855 Electrical wiremen
- 856 Telephone and telegraph installers
- 857 Electric linemen and cable jointers
- 859 Electrical fitters and related electrical and electronics workers, n.e.c.
- 861 Broadcasting station operators
- 862 Sound equipment operators and cinema projectionists
- 871 Plumbers and pipe fitters
- 872 Welders and flame cutters
- 873 Sheet metal workers
- 874 Structural metal preparers and erectors
- 880 Jewellery and precious metal workers
- 891 Glass formers, cutters, grinders and finishers
- 892 Potters and related clay and abrasive formers
- 893 Glass and ceramics kilnmen
- 894 Glass engravers and etchers
- 895 Glass and ceramics painters and decorators
- 899 Glass formers, potters and related workers, n.e.c.
- 901 Rubber and plastics product makers (except tire makers and tire vulcanisers)
- 902 Tire makers and vulcanisers
- 910 Paper and paperboard products makers
- 921 Compositors and typesetters
- 922 Printing pressmen

-
- 923 Stereotypers and electrotypers
 - 924 Printing engravers (except photo-engravers)
 - 925 Photo-engravers
 - 926 Bookbinders and related workers
 - 927 Photographic darkroom workers
 - 929 Printers and related workers, n.e.c.
 - 931 Painters, construction
 - 939 Painters, n.e.c.
 - 941 Musical instrument makers and tuners
 - 942 Basketry weavers and brush makers
 - 943 Non-metallic mineral product makers
 - 949 Other production and related workers
 - 951 Bricklayers, stonemasons and tile setters
 - 952 Reinforced-concreters, cement finishers and terrazzo workers
 - 953 Roofers
 - 954 Carpenters, joiners and parquetry workers
 - 955 Plasterers
 - 956 Insulators
 - 957 Glaziers
 - 959 Construction workers, n.e.c.
 - 961 Power-generating machinery operators
 - 969 Stationary engine and related equipment operators, n.e.c.
 - 971 Dockers and freight handlers
 - 972 Riggers and cable splicers
 - 973 Crane and hoist operators
 - 974 Earth-moving and related machinery operators
 - 979 Material-handling equipment operators, n.e.c.
 - 981 Ships' deck ratings, barge crews and boatmen
 - 982 Ships' engine-room ratings
 - 983 Railway engine drivers and firemen
 - 984 Railway brakemen, signalmen and shunters
 - 985 Motor vehicle drivers
 - 986 Animal and animal-drawn vehicle drivers
 - 989 Transport equipment operators, n.e.c.

999 Labourers, factory workers, unskilled workers not elsewhere classified

001 Soldier (armed forces)

002 Officer (armed forces)

-33 Workers with inadequately described or undefinable (not classifiable) job

-7 Refused

-8 Don't know

-9 No answer

-10 Not applicable

Appendix D – Occupational Minor Group

Appendix D – Occupational Minor Group

Categories 001 to 099 correspond to the minor groups of ISCO 1968 while categories 101 to 109 were created by ZUMA.

Please note that for technical reasons the codes in the actual data do not have leading zeroes.

001	Chemists, physicists and related professions
002	Architects, engineers and related technicians
003	Architects, engineers and related technicians
004	Aircraft and ships' officers
005	Life scientists and related life science technicians
006	Medical, dental, veterinary and related professions
007	Medical, dental, veterinary and related professions
008	Statisticians, mathematicians, system analysts and related technicians
009	Economists
011	Accountants
012	Jurists
013	Teachers
014	Workers in religion
015	Authors, journalists, and related writers
016	Sculptors, painters, photographers and related creative artists
017	Musicians, composers, dancers and performing artists
018	Athletes, sportsmen and related workers
019	Professionals, scientists, technical and related workers not elsewhere classified
020	Legislative officials and government administrators
021	Managers
030	Clerical supervisors
031	Government executive officials
032	Stenographers, typists, and card- and tape-punching machine operators
033	Bookkeepers, cashiers and related workers
034	Computing machine operators
035	Transport and communication supervisors
036	Transport conductors
037	Mail distribution clerks

- 038 Telephone and telegraph operators
- 039 Clerical and related workers not elsewhere classified
- 040 Managers (wholesale and retail trade)
- 041 Working proprietors (wholesale and retail trade)
- 042 Sales supervisors and buyers
- 043 Technical salesman, commercial travellers and manufacturers' agents
- 044 Insurance, real estate, securities and business services salesman, and auctioneers
- 045 Salesmen, shop assistants and related workers
- 049 Sales workers not elsewhere classified
- 050 Managers (catering and lodging services)
- 051 Working proprietors (catering and lodging services)
- 052 Housekeeping and related service supervisors
- 053 Cooks, waiters, bartenders and related workers
- 054 Maids and related housekeeping service workers not elsewhere classified
- 055 Building caretakers, charworkers, cleaners and related workers
- 056 Launderers, dry-cleaners and pressers
- 057 Hairdressers, barbers, beauticians and related workers
- 058 Protective service workers not elsewhere classified
- 059 Service workers not elsewhere classified
- 060 Farm managers and supervisors
- 061 Farmers (including specialized farmers)
- 062 Agricultural and animal husbandry workers
- 063 Forestry workers
- 064 Fishermen, hunters and related workers
- 070 Production supervisors and general foremen
- 071 Miners, quarrymen, well drillers and related workers
- 072 Metal processors
- 073 Wood preparation workers and paper makers
- 074 Chemical processors and related workers
- 075 Spinners, weavers, knitters, dyers and related workers
- 076 Tanners, fellmongers and pelt dressers
- 077 Food and beverage processors
- 078 Tobacco preparers and tobacco product managers
- 079 Tailors, dressmakers, sewers, upholsterers and related workers

Appendix E - ISCO-88

Appendix E - ISCO-88

International Standard Classification of Occupations (ISCO 1988).

Source:

International Labour Office (ed.) 1990: International standard classification of occupations: ISCO-88, Geneva.

All regular ISCO-codes in the data file are in a four digit format. Where necessary, trailing zeros were added.

1 Legislators, senior officials and managers in private
industry, enterprise and business

11 Legislators and senior officials

111 Legislators

1110 Legislators

112 Senior government officials

1120 Senior government officials

113 Traditional chiefs and heads of villages

1130 Traditional chiefs and heads of villages

114 Senior officials of special-interest organisations

1141 Senior officials of political-party organisations

1142 Senior officials of employers', workers' and other economic-interest organisations

1143 Senior officials of humanitarian and other special-interest organisations

12 Corporate managers in big enterprises (1)

121 Directors and chief executives

1210 Directors and chief executives

122 Production and operations department managers

1221 Production and operations department managers in agriculture, hunting, forestry and
fishing

1222 Production and operations department managers in manufacturing

1223 Production and operations department managers in construction

1224 Production and operations department managers on wholesale and retail trade

1225 Production and operations department managers in restaurants and hotels

- 1226 Production and operations department managers in transport, storage and communications
- 1227 Production and operations department managers in business services
- 1228 Production and operations department managers in personal care, cleaning and related services
- 1229 Production and operations department managers not elsewhere classified
- 123 Other department managers
 - 1231 Finance and administration department managers
 - 1232 Personnel and industrial relations department managers
 - 1233 Sales and marketing department managers
 - 1234 Advertising and public relations department managers
 - 1235 Supply and distribution department managers
 - 1236 Computing services department managers
 - 1237 Research and development department managers
 - 1239 Other department managers, not elsewhere classified
- 13 General managers small enterprises (2)
 - 131 General managers
 - 1311 General managers in agriculture, hunting, forestry and fishing
 - 1312 General managers in manufacturing
 - 1313 General managers in construction
 - 1314 General managers in wholesale and retail trade
 - 1315 General managers of restaurants and hotels
 - 1316 General managers in transport, storage and communications
 - 1317 General managers of business services
 - 1318 General managers in personal care, cleaning and related services
 - 1319 General managers not elsewhere classified
- 2 Scientists, professionals
 - 21 Physical, mathematical and engineering science professionals
 - 211 Physicists, chemists and related professionals
 - 2111 Physicists and astronomers
 - 2112 Meteorologists
 - 2113 Chemists
 - 2114 Geologists and geophysicists

-
- 212 Mathematicians, statisticians and related professionals
 - 2121 Mathematicians and related professionals
 - 2122 Statisticians
 - 213 Computing professionals
 - 2131 Computer systems designers and analysts
 - 2132 Computer programmers
 - 2139 Computing professionals not elsewhere classified
 - 214 Architects, engineers and related professionals
 - 2141 Architects, town and traffic planners
 - 2142 Civil engineers
 - 2143 Electrical engineers
 - 2144 Electronics and telecommunications engineers
 - 2145 Mechanical engineers
 - 2146 Chemical engineers
 - 2147 Mining engineers, metallurgists and related professionals
 - 2148 Cartographers and surveyors
 - 2149 Architects, engineers and related professionals not elsewhere classified
 - 22 Life science and health professionals
 - 221 Life science professionals
 - 2211 Biologists, botanists, zoologists and related professionals
 - 2212 Pharmacologists, pathologists and related professionals (not medicines)
 - 2213 Agronomists and related professionals
 - 222 Health professionals (except nursing)
 - 2221 Medical doctors
 - 2222 Dentists
 - 2223 Veterinarians
 - 2224 Pharmacists
 - 2229 Health professionals (except nursing) not elsewhere classified
 - 223 Nursing and midwifery professionals
 - 2230 Nursing and midwifery professionals
 - 23 Teaching professionals
 - 231 College, university and higher education teaching professionals
 - 2310 College, university and higher education teaching professionals
 - 232 Secondary education teaching professionals
 - 2320 Secondary education teaching professionals

- 233 Primary and pre-primary education teaching professionals
 - 2331 Primary education teaching professionals
 - 2332 Pre-primary education teaching professionals
- 234 Special education teaching professionals
 - 2340 Special education teaching professionals
- 235 Other teaching professionals
 - 2351 Education methods specialists
 - 2352 School inspectors
 - 2359 Other teaching professionals not elsewhere classified

- 24 Other professionals and related professions
 - 241 Business professionals
 - 2411 Accountants
 - 2412 Personnel and careers professionals
 - 2419 Business professionals not elsewhere classified
 - 242 Legal professionals
 - 2421 Lawyers
 - 2422 Judges
 - 2429 Legal professionals not elsewhere classified
 - 243 Archivists, librarians and related information professionals
 - 2431 Archivists and curators
 - 2432 Librarians and related information professionals
 - 244 Social science and related professionals
 - 2441 Economists
 - 2442 Sociologists, anthropologists and related professionals
 - 2443 Philosophers, historians and political scientists
 - 2444 Philologists, translators and interpreters
 - 2445 Psychologists
 - 2446 Social work professionals
 - 245 Writers and creative or performing artists
 - 2451 Authors, journalists and other writers
 - 2452 Sculptors, painters and related artists
 - 2453 Composers, musicians and singers
 - 2454 Choreographers and dancers
 - 2455 Film, stage and related actors and directors

-
- 246 Religious professionals
 - 2460 Religious professionals
 - 25 Education professionals n.e.c. * (mostly nursery school teachers or social workers)
 - 3 Technicians and associate professionals
 - 31 Physical and engineering science associate professional
 - 311 Physical and engineering science technicians
 - 3111 Chemical and physical science technicians
 - 3112 Civil engineering technicians
 - 3113 Electrical engineering technicians
 - 3114 Electronics and telecommunications engineering technicians
 - 3115 Mechanical engineering technicians
 - 3116 Chemical engineering technicians
 - 3117 Mining and metallurgical technicians
 - 3118 Draughtspersons
 - 3119 Physical and engineering science technicians not elsewhere classified
 - 312 Computer associate professionals
 - 3121 Computer assistants
 - 3122 Computer equipment operators
 - 3123 Industrial robot controllers
 - 313 Optical and electronic equipment operators
 - 3131 Photographers and image and sound recording equipment operators
 - 3132 Broadcasting and telecommunications equipment operators
 - 3133 Medical equipment operators
 - 3139 Optical and electronic equipment operators not elsewhere classified
 - 314 Ship and aircraft controllers and technicians
 - 3141 Ships' engineers
 - 3142 Ships' deck officers and pilots
 - 3143 Aircraft pilots and related associate professionals
 - 3144 Air traffic controllers
 - 3145 Air traffic safety technicians
 - 315 Safety and quality inspectors
 - 3151 Building and fire inspectors
 - 3152 Safety, health and quality inspectors
 - 32 Life science and health associate professionals

- 321 Life science technicians and related associate professionals
 - 3211 Life science technicians
 - 3212 Agronomy and forestry technicians
 - 3213 Farming and forestry advisers
- 322 Modern health associate professionals (except nursing)
 - 3221 Medical assistants
 - 3222 Sanitarians
 - 3223 Dieticians and nutritionists
 - 3224 Optometrists and opticians
 - 3225 Dental assistants
 - 3226 Physiotherapists and related associate professionals
 - 3227 Veterinary assistants
 - 3228 Pharmaceutical assistants
 - 3229 Modern health associate professionals (except nursing) not elsewhere classified
- 323 Nursing and midwifery associate professionals
 - 3231 Nursing associate professionals
 - 3232 Midwifery associate professionals
- 324 Traditional medicine practitioners and faith healers
 - 3241 Traditional medicine practitioners
 - 3242 Faith healers
- 33 Teaching associate professionals
 - 331 Primary education teaching associate professionals
 - 3310 Primary education teaching associate professionals
 - 332 Pre-primary education teaching associate professionals
 - 3320 Pre-primary education teaching associate professionals
 - 333 Special education teaching associate professionals
 - 3330 Special education teaching associate professionals
 - 334 Other teaching associate professionals
 - 3340 Other teaching associate professionals
- 34 Other associate professionals
 - 341 Finance and sales associate professionals
 - 3411 Securities and finance dealers and brokers
 - 3412 Insurance representatives
 - 3413 Estate agents

- 3414 Travel consultants and organisers
- 3415 Technical and commercial sales representative
- 3416 Buyers
- 3417 Appraisers, valuers and auctioneers
- 3419 Finance and sales associate professionals not elsewhere classified
- 342 Business services agents and trade brokers
 - 3421 Trade brokers
 - 3422 Clearing and forwarding agents
 - 3423 Employment agents and labour contractors
 - 3429 Other business services agents and trade brokers not elsewhere classified
- 343 Administrative associate professionals
 - 3431 Administrative secretaries and related associate professionals
 - 3432 Legal and related business associate professionals
 - 3433 Bookkeepers
 - 3434 Statistical, mathematical and related associate professionals
 - 3439 Administrative associate professionals not elsewhere classified
- 344 Customs, tax and related government associate professionals
 - 3441 Customs and border inspectors
 - 3442 Government tax and excise officials
 - 3443 Government social benefits officials
 - 3444 Government licensing officials
 - 3449 Customs, tax and related government associate professionals not elsewhere classified
- 345 Police inspectors and detectives
 - 3450 Police inspectors and detectives
- 346 Social work associate professionals
 - 3460 Social work associate professionals
- 347 Artistic, entertainment and sports associate professionals
 - 3471 Decorators and commercial designers
 - 3472 Radio, television and other announcers
 - 3473 Street, night-club and related musicians, singers and dancers
 - 3474 Clowns, magicians, acrobats and related associate professionals
 - 3475 Athletes, sportspersons and related associate professionals
- 348 Religious associate professionals
 - 3480 Religious associate professionals

41 Office clerks**411 Secretaries, keyboard-operating clerks and related clerks**

- 4111 Stenographers and typists
- 4112 Word-processor and related operators
- 4113 Data entry operators
- 4114 Calculating machine operators
- 4115 Secretaries

412 Numerical clerks

- 4121 Accounting and bookkeeping clerks
- 4122 Statistical and finance clerks

413 Material-recording and transport clerks

- 4131 Stock clerks
- 4132 Production clerks
- 4133 Transport clerks

414 Library, mail and related clerks

- 4141 Library and filing clerks
- 4142 Mail carriers and sorting clerks
- 4143 Coding, proof-reading and related clerks
- 4144 Scribes and related workers

419 Other office clerks

- 4190 Other office clerks

42 Customer services clerks**421 Cashiers, tellers and related clerks**

- 4211 Cashiers and ticket clerks
- 4212 Tellers and other counter clerks
- 4213 Bookmakers and croupiers
- 4214 Pawnbrokers and money-lenders
- 4215 Debt-collectors and related workers

422 Client information clerks

- 4221 Travel agency and related clerks
- 4222 Receptionists and information clerks
- 4223 Telephone switchboard operators

43 Auxiliary office workers *

44 Administrative officer postal service, higher civil service ('Inspektor'-level and higher) *

45 Administrative officer railways, higher civil service ('Inspektor'-level and higher) *

5 Personal service, service workers and shop and market sales workers

51 Personal and protective services workers

511 Travel attendants and related workers

5111 Travel attendants and travel stewards

5112 Transport conductors

5113 Travel guides

512 Housekeeping and restaurant services workers

5121 Housekeepers and related workers

5122 Cooks

5123 Waiters, waitresses and bartenders

513 Personal care and related workers

5131 Child care workers

5132 Institution-based personal care workers

5133 Home-based personal care workers

5139 Personal care and related workers not elsewhere classified

514 Other personal services workers

5141 Hairdressers, barbers, beauticians and related workers

5142 Companions and valets

5143 Undertakers and embalmers

5149 Other personal services workers not elsewhere classified

515 Astrologers, fortune-tellers and related workers

5151 Astrologers and related workers

5152 Fortune-tellers, palmists and related workers

516 Protective services workers

5161 Fire-fighters

5162 Police officers

5163 Prison guards

5169 Protective services workers not elsewhere classified

52 Models, salespersons and demonstrators

521 Fashion and other models

5210 Fashion and other models

522 Shop salespersons and demonstrators

- 5220 Shop salespersons and demonstrators
- 523 Stall and market salespersons
 - 5230 Stall and market salespersons
- 6 Skilled agricultural and fishery workers
 - 61 Market-oriented skilled agricultural and fishery workers
 - 611 Market gardeners and crop growers
 - 6111 Field crop and vegetable growers
 - 6112 Tree and shrub crop growers
 - 6113 Gardeners, horticultural and nursery growers
 - 6114 Mixed-crop growers
 - 612 Market-oriented animal producers and related workers
 - 6121 Dairy and livestock producers
 - 6122 Poultry producers
 - 6123 Apiarists and sericulturists
 - 6124 Mixed animal producers
 - 6129 Market-oriented animal producers and related workers not elsewhere classified
 - 613 Market-oriented crop animal producers
 - 6130 Market-oriented crop animal producers
 - 614 Forestry and related workers
 - 6141 Forestry workers and loggers
 - 6142 Charcoal burners and related workers
 - 615 Fishery workers, hunters and trappers
 - 6151 Aquatic-life cultivation workers
 - 6152 Inland and coastal waters fishery workers
 - 6153 Deep-sea fishery workers
 - 6154 Hunters and trappers
 - 62 Subsistence agricultural and fishery workers
 - 621 Subsistence agricultural and fishery workers
 - 6210 Subsistence agricultural and fishery workers
- 7 Craft and related trades workers
 - 71 Extraction and building trades workers
 - 711 Miners, shotfirers, stone cutters and carvers
 - 7111 Miners and quarry workers
 - 7112 Shotfirers and blasters

-
- 7113 Stone splitters, cutters and carvers
 - 712 Building frame and related trades workers
 - 7121 Builders, traditional materials
 - 7122 Bricklayers and stonemasons
 - 7123 Concrete placers, concrete finishers and related workers
 - 7124 Carpenters and joiners
 - 7129 Building frame and related trades workers not elsewhere classified
 - 713 Building finishers and related trades workers
 - 7131 Roofers
 - 7132 Floor layers and tile setters
 - 7133 Plasterers
 - 7134 Insulation workers
 - 7135 Glaziers
 - 7136 Plumbers and pipe fitters
 - 7137 Building and related electricians
 - 714 Painters, building structure cleaners and related trades workers
 - 7141 Painters and related workers
 - 7142 Varnishers and related painters
 - 7143 Building structure cleaners
 - 72 Metal, machinery and related trades workers
 - 721 Metal moulders, welders, sheetmetal workers, structural-metal preparers, and related trades workers
 - 7211 Metal moulders and coremakers
 - 7212 Welders and flamecutters
 - 7213 Sheet-metal workers
 - 7214 Structural-metal preparers and erectors
 - 7215 Riggers and cable splicers
 - 7216 Underwater workers
 - 722 Blacksmiths, tool-makers and related trades workers
 - 7221 Blacksmiths, hammer-smiths and forging-press workers
 - 7222 Tool-makers and related workers
 - 7223 Machine-tool setters and setter-operators
 - 7224 Metal wheel-grinders, polishers and tool sharpeners
 - 723 Machinery mechanics and fitters
 - 7231 Motor vehicle mechanics and fitters

- 7232 Aircraft engine mechanics and fitters
- 7233 Agricultural- or industrial-machinery mechanics and fitters
- 724 Electrical and electronic equipment mechanics and fitters
 - 7241 Electrical mechanics and fitters
 - 7242 Electronics fitters
 - 7243 Electronics mechanics and servicers
 - 7244 Telegraph and telephone installers and servicers
 - 7245 Electrical line installers, repairers and cable jointers
- 73 Precision, handicraft, printing and related trades workers
 - 731 Precision workers in metal and related materials
 - 7311 Precision-instrument makers and repairers
 - 7312 Musical-instrument makers and tuners
 - 7313 Jewellery and precious-metal workers
 - 732 Potters, glass-makers and related trades workers
 - 7321 Abrasive wheel formers, potters and related workers
 - 7322 Glass-makers, cutters, grinders and finishers
 - 7323 Glass engravers and etchers
 - 7324 Glass, ceramics and related decorative painters
 - 733 Handicraft workers in wood, textile, leather and related materials
 - 7331 Handicraft workers in wood and related materials
 - 7332 Handicraft workers in textile, leather and related materials
 - 734 Printing and related trades workers
 - 7341 Compositors, typesetters and related workers
 - 7342 Stereotypers, and electrotypers
 - 7343 Printing engravers and etchers
 - 7344 Photographic and related workers
 - 7345 Bookbinders and related workers
 - 7346 Silk-screen, block and textile printers
- 74 Other craft and related trades workers
 - 741 Food processing and related trades workers
 - 7411 Butchers, fishmongers and related food preparers
 - 7412 Bakers, pastry-cooks and confectionary maker
 - 7413 Dairy-products makers
 - 7414 Fruit, vegetable and related preservers

-
- 7415 Food and beverage tasters and graders
 - 7416 Tobacco preparers and tobacco products maker
 - 742 Wood treaters, cabinet-makers and related trades workers
 - 7421 Wood treaters
 - 7422 Cabinet-makers and related workers
 - 7423 Woodworking-machine setters and setter-operators

0002 Officers (armed forces)

-33 Workers with unidentifiable (not classifiable) or inadequately described job

-7 Refused

-8 Don't know

-9 No answer

Notes:

(*) custom codes added by ZUMA

(1) This occupational group is intended to cover persons who, as directors, chief executives or department managers, manage enterprises, organizations or departments, requiring a total of three or more managers.

(2) This occupational group is intended to include persons who, either on their own behalf or on behalf of the proprietor, manage enterprises or in some cases organizations with the help of non-managerial staff and no more than one other senior staff, who should also be classified in this sub-major group, because this person's responsibilities will usually be more varied than those of a

department manager in a larger enterprise or organization. Non-managerial staff should be classified according to their specific tasks.

(3) This code was introduced to supplement the existing ISCO-classification. It was taken from the European Community variant of the classification called ISCO 88 (COM) (Source: Elias, Peter and Margaret Birch 1994: Establishment of Community-Wide Occupational Statistics. ISCO 88 (COM): A Guide for Users, Coventry: University of Warwick, Institute for Employment Research).

For further information compare also:

Wolf, Christoph 1997:

The ISCO-88 International Standard Classification of Occupations in Cross-National Survey Research, in: Bulletin de Methodologie Sociologique 54: 23 - 40.

Appendix F - ISCO-08

Appendix F – ISCO-08

International Standard Classification of Occupations (ISCO 2008).

Source:

Commission Recommendation of 29 October 2009 on the use of the International Standard Classification of Occupations (ISCO-08) (Text with EEA relevance), OJ L 292, 10.11.2009, p. 31-47, <http://eur-lex.europa.eu/LexUriServ/LexUriServ.do?uri=OJ:L:2009:292:0031:0047:EN:PDF> (accessed 08 July 2019)

ISCO 2008 coding in ALLBUS uses a number of custom codes. These are marked * in the following documentation. All regular ISCO-codes in the data file are in a four digit format. Where necessary, trailing zeros were added.

1 Managers

11 Chief executives, senior officials and legislators

111 Legislators and senior officials

1111 Legislators

1112 Senior government officials

1113 Traditional chiefs and heads of village

1114 Senior officials of special-interest organisations

112 Managing directors and chief executives

1120 Managing directors and chief executives

12 Administrative and commercial managers

121 Business services and administration managers

1211 Finance managers

1212 Human resource managers

1213 Policy and planning managers

7127 Air conditioning and refrigeration mechanics
713 Painters, building structure cleaners and related trades workers
7131 Painters and related workers
7132 Spray painters and varnishers
7133 Building structure cleaners
72 Metal, machinery and related trades workers
721 Sheet and structural metal workers, moulders and welders, and related workers
7211 Metal moulders and coremakers
7212 Welders and flamecutters
7213 Sheet-metal workers
7214 Structural-metal preparers and erectors
7215 Riggers and cable splicers
722 Blacksmiths, toolmakers and related trades workers
7221 Blacksmiths, hammersmiths and forging press workers
7222 Toolmakers and related workers
7223 Metal working machine tool setters and operators
7224 Metal polishers, wheel grinders and tool sharpeners
723 Machinery mechanics and repairers
7231 Motor vehicle mechanics and repairers
7232 Aircraft engine mechanics and repairers
7233 Agricultural and industrial machinery mechanics and repairers
7234 Bicycle and related repairers
725 Metal workers *

7250 Metal workers *

73 Handicraft and printing workers

731 Handicraft workers

7311 Precision-instrument makers and repairers

7312 Musical instrument makers and tuners

7313 Jewellery and precious-metal workers

7314 Potters and related workers

7315 Glass makers, cutters, grinders and finishers

7316 Sign writers, decorative painters, engravers and etchers

7317 Handicraft workers in wood, basketry and related materials

7318 Handicraft workers in textile, leather and related materials

7319 Handicraft workers not elsewhere classified

732 Printing trades workers

7321 Pre-press technicians

7322 Printers

7323 Print finishing and binding workers

74 Electrical and electronic trades workers

741 Electrical equipment installers and repairers

7411 Building and related electricians

7412 Electrical mechanics and fitters

7413 Electrical line installers and repairers

742 Electronics and telecommunications installers and repairers

7421 Electronics mechanics and servicers

7422 Information and communications technology installers and servicers

75 Food processing, wood working, garment and other craft and related trades workers

751 Food processing and related trades workers

7511 Butchers, fishmongers and related food preparers

7512 Bakers, pastry-cooks and confectionery makers

7513 Dairy-products makers

7514 Fruit, vegetable and related preservers

7515 Food and beverage tasters and graders

7516 Tobacco preparers and tobacco products makers

752 Wood treaters, cabinet-makers and related trades workers

7521 Wood treaters

7522 Cabinet-makers and related workers

7523 Woodworking-machine tool setters and operators

753 Garment and related trades workers
7531 Tailors, dressmakers, furriers and hatters
7532 Garment and related pattern-makers and cutters
7533 Sewing, embroidery and related workers
7534 Upholsterers and related workers
7535 Pelt dressers, tanners and fellmongers
7536 Shoemakers and related workers
754 Other craft and related workers
7541 Underwater divers
7542 Shotfirers and blasters
7543 Product graders and testers (excluding foods and beverages)
7544 Fumigators and other pest and weed controllers
7549 Craft and related workers not elsewhere classified
8 Plant and machine operators and assemblers
81 Stationary plant and machine operators
811 Mining and mineral processing plant operators
8111 Miners and quarriers
8112 Mineral and stone processing plant operators
8113 Well drillers and borers and related workers
8114 Cement, stone and other mineral products machine operators
812 Metal processing and finishing plant operators
8121 Metal processing plant operators
8122 Metal finishing, plating and coating machine operators
813 Chemical and photographic products plant and machine operators
8131 Chemical products plant and machine operators
8132 Photographic products machine operators
814 Rubber, plastic and paper products machine operators
8141 Rubber products machine operators
8142 Plastic products machine operators
8143 Paper products machine operators
815 Textile, fur and leather products machine operators
8151 Fibre preparing, spinning and winding machine operators
8152 Weaving and knitting machine operators
8153 Sewing machine operators
8154 Bleaching, dyeing and fabric cleaning machine operators
8155 Fur and leather preparing machine operators

8156 Shoemaking and related machine operators
8157 Laundry machine operators
8159 Textile, fur and leather products machine operators not elsewhere classified
816 Food and related products machine operators
8160 Food and related products machine operators
817 Wood processing and papermaking plant operators
8171 Pulp and papermaking plant operators
8172 Wood processing plant operators
818 Other stationary plant and machine operators
8181 Glass and ceramics plant operators
8182 Steam engine and boiler operators
8183 Packing, bottling and labelling machine operators
8189 Stationary plant and machine operators not elsewhere classified
82 Assemblers
821 Assemblers
8211 Mechanical machinery assemblers
8212 Electrical and electronic equipment assemblers
8219 Assemblers not elsewhere classified
83 Drivers and mobile plant operators
831 Locomotive engine drivers and related workers
8311 Locomotive engine drivers
8312 Railway brake, signal and switch operators
832 Car, van and motorcycle drivers
8321 Motorcycle drivers
8322 Car, taxi and van drivers
833 Heavy truck and bus drivers
8331 Bus and tram drivers
8332 Heavy truck and lorry drivers
834 Mobile plant operators
8341 Mobile farm and forestry plant operators
8342 Earthmoving and related plant operators
8343 Crane, hoist and related plant operators
8344 Lifting truck operators
835 Ships' deck crews and related workers
8350 Ships' deck crews and related workers
9 Elementary occupations

- 91 Cleaners and helpers
 - 911 Domestic, hotel and office cleaners and helpers
 - 9111 Domestic cleaners and helpers
 - 9112 Cleaners and helpers in offices, hotels and other establishments
 - 912 Vehicle, window, laundry and other hand cleaning workers
 - 9121 Hand launderers and pressers
 - 9122 Vehicle cleaners
 - 9123 Window cleaners
 - 9129 Other cleaning workers
- 92 Agricultural, forestry and fishery labourers
 - 921 Agricultural, forestry and fishery labourers
 - 9211 Crop farm labourers
 - 9212 Livestock farm labourers
 - 9213 Mixed crop and livestock farm labourers
 - 9214 Garden and horticultural labourers
 - 9215 Forestry labourers
 - 9216 Fishery and aquaculture labourers
- 93 Labourers in mining, construction, manufacturing and transport
 - 931 Mining and construction labourers

Appendix G – Household Classification and Family Typology according to Porst (1984)

Appendix G – Household Classification and Family Typology according to Porst (1984)

Household classification dh05			Family typology dh08	
Code	Description	Respondent's position in the household	Description	Code
10	H1ASingles living alone		Cannot be generated	-32
20	H1BSingles living alone, separated, divorced, widowed		Cannot be generated	-32
30	H2ACohabiting couples		Cannot be generated	-32
40	H2BMarried couples		Cannot be generated	-32
51	H3ASingle adults with at least one child	Respondent is single parent	Cannot be generated	-32
52	H3ASingle adults with at least one child	Respondent is child of a single parent	Cannot be generated	-32
61	H3BCohabiting couples with single children	Respondent is parent of the single child. The case 'respondent is partner of the single child's parent' can only be coded, if the respondent calls the child 'step-child'	Cannot be generated	-32
64	H3BCohabiting couples with single children	Respondent is single and the child of both partners	Cannot be generated	-32
71	H3CCohabiting couples with at least one non-single child, possibly other single children	Respondent is one of the cohabiting couple	Cannot be generated	-32
72	H3CCohabiting couples with at least one non-single child, possibly other single children	The non-single child is the respondent	Cannot be generated	-32
75	H3CCohabiting couples with at least one non-single child, possibly other single children	One of the single children is the respondent	Cannot be generated	-32
81	H3DCohabiting couples with grandchildren	Respondent is grandchild's grandparent	Cannot be generated	-32
83	H3DCohabiting couples with grandchildren	Respondent is one of the grandchildren	Cannot be generated	-32
91	H3EMarried couples, all children are single	Respondent is parent	F1: Nuclear family - a) complete	11
92	H3EMarried couples all children are single	Respondent is child	F1: Nuclear family - a) complete	11
93	H3ESeparated, divorced, widowed adults, all children are single	Respondent is parent	F1: Nuclear family - b) incomplete	12
94	H3ESeparated, divorced, widowed adults, all children are single	Respondent is child	F1: Nuclear family - b) incomplete	12
101	H3FMarried couples with at least one non-single child; possibly other single children	Respondent is parent	F2: Two-generation-family - a) complete	21

Household classification dh05			Family typology dh08	
Code	Description	Respondent's position in the household	Description	Code
102	H3F Separated, divorced, widowed adults with at least one non-single child; possibly other single children	Respondent is parent	F2: Two-generation-family - b) incomplete	22
103	H3F Married couples with at least one non-single child; possibly other single children, complete two-generation-family	Respondent is child and single	F2: Two-generation-family - a) complete	21
104	H3F Married couples with at least one non-single child; possibly other single children, incomplete two-generation-family	Respondent is child and single	F2: Two-generation-family - b) incomplete	22
105	H3F Married couples with at least one non-single child; possibly other single children, two-generation-family with two sets of parents	Respondent is child and non-single	F2: Two-generation-family - a) complete or b) incomplete	21, 22
106	H3F Married couples with at least one non-single child; possibly other single children, two-generation-family with 3 persons of the parent-generation	Respondent is child and single	F2: Two-generation-family - a) complete or b) incomplete	21, 22
107	H3F Married couples with at least one non-single child; possibly other single children; two-generation-families with two persons of the parent-generation	Respondent is non-single child or this child's spouse	F2: Two-generation-family - a) complete or b) incomplete	21, 22
108	H3F Married couples with at least one non-single child; possibly other single children; two-generation-families with one parent/parent-in-law	Respondent is non-single child or this child's spouse	F2: Two-generation-family - a) complete or b) incomplete	21, 22
111	H3G Married couples with grandchildren, older generation complete	Respondent is grandparent	F2: Two-generation-family - a) complete	21
112	H3G Married couples with grandchildren, older generation incomplete	Respondent is grandparent	F2: Two-generation-family - b) incomplete	22
113	H3G Married couples with grandchildren, four grandparents	Respondent is grandchild	F2: Two-generation-family - a) complete or b) incomplete	21, 22
114	H3G Married couples with grandchildren, three grandparents	Respondent is grandchild	F2: Two-generation-family - a) complete or b) incomplete	21, 22
115	H3G Married couples with grandchildren, two grandparents	Respondent is grandchild	F2: Two-generation-family - a) complete or b) incomplete	21, 22
116	H3G Married couples with grandchildren, one grandparent	Respondent is grandchild	F2: Two-generation-family - a) complete or b) incomplete	21, 22

Household classification dh05			Family typology dh08	
Code	Description	Respondent's position in the household	Description	Code
121	H4 Members of three generations in linear succession, at least one person of each generation regardless of the marital status must actually live in the household	Respondent is grandparent, i.e., apart from the respondent, one child or child-in-law and one grandchild have to live in the household	F3: Three-generation-family - a) complete or b) incomplete	31, 32
122	H4 Members of three generations in linear succession, at least one person of each generation regardless of the marital status must actually live in the household	Respondent is parent, i.e., apart from the respondent, at least one parent or parent-in-law and one child must live in the household	F3: Three-generation-family - a) complete or b) incomplete	31, 32
123	H4 Members of three generations in linear succession, at least one person of each generation regardless of the marital status must actually live in the household	Respondent is child, i.e., apart from the respondent at least one grandparent and one parent or parent-in-law must live in the household	F3: Three-generation-family - a) complete or b) incomplete	31, 32
132	H5 Four-generation-households; members of four successive generations, at least one person each of three generations must actually live in the household, of which at least one person belongs to the first and one person to the last generation	Respondent is parent, i.e., apart from the respondent, at least one parent and one grandchild must live in the household	F4: Four-generation-family - a) complete or b) incomplete	41, 42
133	H5 Four-generation-households; members of four successive generations, at least one person each of three generations must actually live in the household, of which at least one person belongs to the first and one person to the last generation	Respondent is child, i.e., apart from the respondent, at least one grandparent and one of his/her own children must live in the household	F4: Four-generation-family - a) complete or b) incomplete	41, 42
140	H6 Households of relatives with family core; all households of types H2B and H3E to H5 with additionally at least one person related to household members, but not in the linear succession of generations		F5: Extended family	50
150	H7A Households of relatives without family core; households of types H2A, H3A-H3D with at least one additional relative outside of the linear succession of generations		Cannot be generated	-32
160	H7B Households of relatives without family core; relatives not in linear succession plus unrelated persons		Cannot be generated	-32
170	H7C Only relatives not in linear succession of generations		Cannot be generated	-32

Appendix H – Variables by Year

Appendix H – Variables by Year: A List of Correspondences between the Cumulated Data File and the Original Survey Files

This list of correspondences provides an overview of those variables from the original surveys that are represented in this ALLBUS/GGSS cumulation.

The first column of the following table contains a variable label indicating the content of the variable. Under the heading 'CUM', column two then lists the variable name used in this cumulated data file, while the following columns, headed '80' to '16', list the corresponding variable numbers in the original surveys.

Variables based on integrated data from several original variables are marked in column one with the label 'INTEGRATED: ...' followed by the years concerned, e.g. 'INTEGRATED: 1980-1986'. Columns '80' to '16' then list the variable numbers of the original data that entered into the integrated variable.

A dash ('-') in columns '80' to '16' indicates that this variable was not part of the ALLBUS/GGSS survey in this particular year.

Finally, data that has been newly generated for this cumulated data file is marked 'NEW' in columns '80' to '16'.

[illegible]
