ISCO88 - R: Occupation ISCO 1988

Please give the text of the source question(s) on the respondent's occupation used in your field questionnaire. If ISCO88-codes are not coded directly from the responses, but derived from a country-specific occupation coding scheme, please provide a table of correspondence between country-specific and ISCO88 codes *attached as a separate file*. Please report which kind of ISCO code you apply. The most common ones are the code developed by the International Labour Organisation (ILO) and the variant developed for the European Union (EU), ISCO-COM. If you apply another variant such as ISCO88-CIS developed by the Statistical Committee of the Commonwealth of Independent States, then please specify. Please do **not** enter **standard** ISCO88 codes here. But please report if your country **adds** or **changes** codes compared to ISCO88, if any.

	National Language	English Translation

SPISCO88 - S-P: Occupation ISCO

Please give the text of the source question(s) on the spouse's occupation used in your field questionnaire. If ISCO88-codes are not coded directly from the responses, but derived from a country-specific occupation coding scheme, please provide a table of correspondence between country-specific and ISCO88 codes *attached as a separate file*. Please report which kind of ISCO code you apply. The most common ones are the code developed by the International Labour Organisation (ILO) and the variant developed for the European Union (EU), ISCO-COM. If you apply another variant such as ISCO88-CIS developed by the Statistical Committee of the Commonwealth of Independent States, then please specify. Please do **not** enter **standard** ISCO88 codes here. But please report if your country **adds** or **changes** codes compared to ISCO88, if any.

COMPUTE k9_7 = 2000 + k9_7 .
EXE .
```

* Hhcycle variable is calculated using temporary variables. The final hhcycle variable is calculated from the variables k6 'Number of adults' and k7 + k8 (total number of children) 'Number of children'.

* Missing values are coded as 0 in order to include all variables and respondents in the calculations.

```
RECODE k5 k6 k7 k8 k9_1 to k9_7 (sysmis=0) .
EXE .
```

* Firstly, the number of children is calculated from the information on the number of children given by the respondent (k7 and k8).

```
COMPUTE child = k7 + k8 .  
EXE .
```

* Secondly, the number of children is calculated from the years of birth of children given by the respondent, that is, if any of the variables k9_1 - k9_7 contain a year of birth, the number of children is the number of years of birth given.

```
COUNT sv_child = k9_1 TO k9_7 (1 thru HI) .  
EXE .
```

* Then the number of children derived from the years of birth is compared to the information on the number of children given by the respondent. If the number derived from the years of birth is higher than the number of children given by the respondent, the number derived from the years of birth is used.

```
IF (sv_child > child) child = sv_child .  
EXE .
```

* The information given for k5 (total number of household members) is coded to k6 (number of adults) for those respondents who do not have children and have responded only to k5, without giving the number of adults (k6).

```
IF (k5 > 0 & k6 = 0 & child = 0) k6 = k5 .  
EXE .
```

* The information given for k5 (total number of household members) is coded to k6 (number of adults) for those respondents who have children and have responded only to k5, without giving the number of adults (k6). The number of adults is calculated by subtracting the number of children (k5 - child) from the total number of household members.

```
IF (k5 > 0 & k6 = 0 & child > 0) k6 = k5 - child .  
EXE .
```

* If the respondent has supplied neither the number of children nor their years of birth (k7, k8, k9_1 - k9_7 = missing value or 0) but the total number of household members (k5) is higher than the number of adults (k6), the number of children is taken to be the difference between these two variables (k5 - k6).

```
IF (k7 = 0 & k8 = 0 & k6 > 0 & k5 > k6) child = k5 - k6 .  
EXE .
```

* Hhcycle variable is constructed with the help of information given by the respondent and temporary variables calculated from it.

* 1 adult.

WEIGHT – Weighting factor

Please report on whether you calculate any weighting variables. If you adjust for non-response bias, please enter the variable(s) on which the sample's distribution(s) is (are) adjusted to the population distribution(s). Please, also report if you apply any kind of rescaling.

<i>Design weight to adjust for unequal selection probabilities</i>	No	[x]
	Yes	[]
<i>Weight to adjust for non-response bias</i>	No	[]
	Yes	[x] → please specify variables used for calculation of weight gender age classes (15–24, ..., 65–74) NUTS3 regions with following modifications: the Greater Helsinki Area was dealt as a separate region type of community (urban - semi-urban - rural)
<i>Are the final weights rescaled to net sample</i>	No	[x] → please specify target population represented by sum of all

<i>size (thus weighted sample size=unweighted sample size)?</i>	case weights SEE NOTE
	Yes [x] SEE NOTE
<i>Note</i>	There are two weights available for calculations: 1) WEIGHT: Is a weight that expands the results to the population level (the sum of the weights is the size of the population aged 15 to 74) and 2) WEIGHT_2: Is a weight that doesn't have the expansion property (the mean of the weights is 1 and the sum of the weights is the number of accepted responses, i.e. the size of the data). Both of the weights are based on the same calibration process, only the scale differs.

MODE – Administrative mode of data-collection (OR Data collection method)

Optional: Recoding Syntax

RECODE ethnic (82 = 34) .

4. Country Questionnaire

Please provide the part(s) of your country questionnaire that relate(s) to the background variables reported in this template. If these variables are already covered by your country's field questionnaire delivered with your national ISSP data file, then just tick on the last page of this document. (PDF or MS Word format preferred.)

[] Already included in field questionnaire provided with the country data file.

[x] Attached file: ISSP_2006_Questionnaire_Fin.pdf, ISSP_2006_Questionnaire_Swe.pdf

5. Frequency Distributions of Source Variables

Please supply frequency distributions with absolute and relative frequencies, missing values *included*, for **all** source variables. *Source variables* are the country-specific variables **before** recodes into ISSP standard variables are done. (MS Word or simple ASCII file preferred.)

Attached file: FI_ISSP_2006_BV_frequencies.spo

6. Correspondence list ISCO88<->national occupation codes

If your country derives ISCO88 codes from a national occupation coding scheme, please supply a correspondence list of national codes and ISCO88 codes. (MS Word or simple ASCII file preferred.)

ISCO88 is used to code responses directly.

Conversion of national coding scheme to ISCO88. Attached file: *ZZZZZZ.ZZZ*.
