

**Czech Republic  
ISSP 2010 – Environment III  
Study Description**

## ISSP Study Description Form

*Study title:* ISSP 2010 on Environment III

*Fieldwork dates:* 1.-30. 06. 2010

*Principal investigators:* Michael L. Smith, Ph.D.

*Sample type:* Three stage stratified probability sampling:  
 1. Stratified probability sampling of settlements from official list of settlements in the Czech Republic.  
 2. Probability sampling of addresses from databases of houses and apartments in selected settlements. Databases of addresses were taken from Register of houses and apartments BUDINFO 1.4.  
 3. Sampling of household members based on Kish grid.

*Fieldwork institute:* Factum Invenio

*Fieldwork methods:* Face to face interview

*N. of respondents:* 1428

*Details about issued sample:*

Please follow the standards laid down in AAPOR/WAPOR, Standard Definitions: [http://www.aapor.org/uploads/standarddefs\\_4.pdf](http://www.aapor.org/uploads/standarddefs_4.pdf). The numbers in the parentheses are those used in Tables 2 and 3 of Standard Definitions.

1. Total number of starting or issued names/addresses (gross sample size) *	2200
2. Interviews (1.0)	1428
3. Eligible, Non-Interview	
A. Refusal/Break-off (2.10)	513
B. Non-Contact (2.20)	130
C. Other	
i. Language Problems (2.33)	11
ii. Miscellaneous Other (2.31, 2.32, 2.35)	37
3. Unknown Eligibility, Non-Interview (3.0)	44
4. Not Eligible	37

\* When new sample units are added during the field period via a new dwelling units list or other standard updating procedure, these additional issued units are added to the starting number of units to make up the total gross sample size. Also, when substitution is used, the total must include the originally drawn cases plus all substitute cases. See AAPOR/WAPOR Standard Definitions, pp. 9-10 for further clarification.

*Language(s):* Czech

*Weight present:* Yes

*Weighting procedure:* Total weight is constructed from: 1) design weights based on proportion of household sizes 2) post-stratification weights based on region, community size, education, age and sex. The weights were derived from data of the Czech Statistical Office.

*Known systematic properties of sample:* The probability of selection of the member of household depends on the size of the household. Due to response differences the basic socio-demographic characteristics - sex and education - are significantly different from the known population characteristics.

*Deviations from ISSP questionnaire:* Due to the mistake in the questionnaire variable SPEMPREL refers to current job (not last one), therefore not economically active are coded as No answer.

*Publications:* Not yet
