## ISSP Study Description Form

*Please use this form for reporting on Module 2006 and later!*

*Study title:* International Social Survey Programme 2014

*Fieldwork dates:* 01.03.2015  
26.06.2015

*Principal investigators:* Marcin W. Zieliński  
Tomasz Jerzyński  
The Robert B. Zajonc Institute for Social Studies, University of Warsaw (ISS UW)

*Sample type:* Households were selected using the three - stage stratified sampling method. Prior to sampling, they were stratified by Voivodeship and then within Voivodeships by the class of the place of residence into large towns (with more than 100,000 inhabitants), small towns (with fewer than 100,000 inhabitants) and rural areas. For urban strata, statistical regions (covering at least 250 dwellings) were the primary sampling units (PSUs) in particular Voivodeships, while statistical districts were the PSUs for rural strata. At the second stage, two dwellings from the randomly generated list of dwellings were drawn systematically in separation for each of the strata established at the first stage. At the third stage respondents were sampled in previously selected dwellings.

Census areas were the primary sampling units, sampled with probabilities proportional to the number of dwellings they covered. Urban strata were divided into large towns with more than 100,000 residents, medium - sized towns of 20,000 - 100,000 and small towns with fewer than 20,000. Furthermore, in five largest cities the strata covered individual districts. At the second stage, three dwellings were sampled per census area in large towns, four per area in medium - sized ones and five per area in the smallest towns. Six dwellings were sampled for rural areas.

3266 dwellings were randomly subsampled from the panel sample for the purposes of the ISSP study.

*Fieldwork institute:* Central Statistical Office of Poland (GUS)

*Fieldwork methods:* self-completion

*N. of respondents:* 2112

<i>Details about issued sample:</i>	1. Total number of starting or issued names/addresses (gross sample size) *	3266
	2. Interviews (1.0)	2112
	3. Eligible, Non-Interview	
	A. Refusal/Break-off (2.10)	936
	B. Non-Contact (2.20)	92
	C. Other	
Please follow the standards laid down in AAPOR/WAPOR, Standard Definitions: <a href="http://www.aapor.org/uploads/standarddefs_4.pdf">http://www.aapor.org/uploads/standarddefs_4.pdf</a> . The numbers in	i. Language Problems (2.33)	0
	ii. Miscellaneous Other (2.31, 2.32, 2.35)	38
	3. Unknown Eligibility, Non-Interview (3.0)	0

2016-04-25

the parentheses are those used in Tables 2 and 3 of Standard Definitions.	4. Not Eligible	
	A. Not a Residence (4.50)	0
	B. Vacant Residence (4.60)	3
	C. No Eligible Respondent (4.70)	0
	D. Other (4.10,4.90)	85

\* When new sample units are added during the field period via a new dwelling units list or other standard updating procedure, these additional issued units are added to the starting number of units to make up the total gross sample size. Also, when substitution is used, the total must include the originally drawn cases plus all substitute cases. See AAPOR/WAPOR Standard Definitions, pp. 9-10 for further clarification.

*Language(s):* Polish

*Weight present:* yes

*Weighting procedure:* Because of household sample weighting factor was calculated using two stages. First stage equalized probabilities of being chosen for all respondents. Second stage was IPF (*Iterative Proportional Fitting*) algorithm. It includes four variables:

1. sex (male, female)
2. age categories (18-24, 25-34, 35-49, 50-59, 60 and more years)
3. type of the place of living (urban/rural)
4. voivodship (16 voivodships corresponding to administrative division of Poland)

5 iteration were needed to comply with the population-based distributions with precision of 7 digits after dot.

Weighting procedure assumes that after weighting the sample size is equal to the number of completed interviews.

*Known systematic* None after weighting

*properties of sample:*

*Deviations from ISSP* None

*questionnaire:*

*Publications:* None
