(Slovensko javno mnenje 2018)

*Fieldwork dates:* Start 2018-03-14 / End 2018-06-12

*Principal investigators:* Mitja Hafner-Fink, Brina Malnar; Public Opinion and Mass Communication Research Centre (CJMMK), University of Ljubljana.

*Sample type:* Universe: The adult residents of SR Slovenia, older than 18 years, living on permanent address.

Excluded: Institutionalised people.

Central Register of Population (a list of names and addresses constantly undated by public administration) is employed as a sampling frame.

Sampling procedure: The sample is two-stage stratified random sample from Central Register of Population. First stage PSU selection is made by probability proportional to size of CEA (Clusters of Enumeration Areas) (200 PSUs). CEA are stratified according to 12 regions\*6 type of settlement. At second stage systematic random selection inside CEA brings fixed numbers of persons (200x10=2000) with name and address. All units at the second stage (individuals) have known probability of selection (equal for units in the same CEA).

*Fieldwork institute:* Public Opinion and Mass Communication Research Centre (CJMMK), University of Ljubljana.

*Fieldwork methods:* CAPI (Computer Assisted Personal Interviewing)

*N. of respondents:* 1047

\* When new sample units are added during the field period via a new dwelling units list or other standard updating procedure, these additional issued units are added to the starting number of units to make up the total gross sample size. Also, when substitution is used, the total must include the originally drawn cases plus all substitute cases.
