Innobarometer 2006

ARCHIVE INFORMATION AND ERRATA

- The data set as distributed by the archive includes only those companies which have been asked the substantial (large) questionnaire, i.e. companies which employ 20 or more employees and which are working in a cluster-like environment (see technical specifications in the survey report). Screening questions Q1 to Q5 are included.
- Weight variable w4_scree is not documented (weight related to the screening process?). Single country results in the official report are apparently based on unweighted data.
- Weighting variables w5_eu32, w5_eu25, w5_eu15, w5_efta3, w5_nms10, w5_cc4 are provided for the analysis of the respective groups of countries.
- LENTIM: Variable is not documented (measurement unit not clear).
- REGION: Original variable REGION divides each country into three categories which are not documented. Variable has been dropped for distribution.
- NUTS: For the Belgium, Czech Republic, Denmark, Hungary, Austria, Slovenia, Slovakia, Bulgaria and Romania the number of categories in this variable coincides with those provided by official NUTS classification. The categories are not documented in particular. Variable has been dropped for distribution.
- The following variables are not documented or not completely documented: SIC4digi, NACE4d_1, NACE2d_1, NACE2FIN, SIC4toNA, SIC4NACE4, NACE4DGT, NACE2DGT, NACE4D_2, nace2d_2, gactivit, gactiv_1, gactiv_2, activity, SEGMENT, SEGMENT_, SEGMEN_1, WGHT_SEC, WGHT_S_1, WGHT_S_2
- WGHT_SEC, WGHT_S_1 and WGHT_S_2 might have been used for the construction of weights.
