Survey instruments

For question wording, answer category text, interviewer instructions or question routing, please see the BASIC BILINGUAL QUESTIONNAIRE and the respective national field questionnaires. The basic questionnaire also includes a technical description of this EUROBAROMETER survey.

The national field questionnaires in the different language versions are available through the GESIS Eurobarometer web pages (STUDY PROFILES) or through the Eurobarometer study descriptions in the GESIS-ZA data catalogue.

Weighting information

For each country a comparison between the sample and the universe was carried out by TNS Opinion & Social (cell or post weighting). The Universe description is derived from EUROSTAT population data or from national statistics offices. For all EU member countries a national weighting procedure, using marginal and intercellular weighting, was carried out based on this Universe description. As such in all countries, gender, age, region and size of locality were introduced in the iteration procedure. For international weighting (i.e. European Union averages), TNS Opinion & Social applies the official population figures as provided by EUROSTAT or national statistic offices.

Five national weighting variables are provided for use in separate analysis of individual countries:

WEIGHT RESULT FROM TARGET reproduces the real number of cases for each country. British and Northern Irish as well as East and West German samples are weighted separately. This weight in its function corresponds to former NATION WEIGHT II (until EUROBAROMETER 31).

WEIGHT SPECIAL UNITED KINGDOM adjusts the British and the Northern Irish samples to their respective proportions in the United Kingdom and should be used whenever the United Kingdom is to be analyzed as a whole. All other samples are excluded from analysis. This weight in its function partly corresponds to former NATION WEIGHT I (until EUROBAROMETER 31).

WEIGHT SPECIAL GERMANY adjusts the East and the West German samples to their respective proportions in the united Germany. All other samples are excluded. This weight should be used whenever the united Germany is to be analyzed as a whole.

WEIGHT SPECIAL GERMANY & UNITED KINGDOM combines WEIGHT SPECIAL UNITED KINGDOM and WEIGHT SPECIAL GERMANY, i.e. adjusts the East and the West German samples, AND the British and Northern Irish samples to their respective proportions in the united Germany and the United Kingdom. All national weights are included. This weight should be used whenever both, the united Germany and the United Kingdom are to be analyzed each as a whole.

WEIGHT NORWAY (W12) corresponds to WEIGHT RESULT FROM TARGET reproducing the real number of cases for the Norwegian sample; all other samples are excluded (weighted by zero).

The European weighting variables include adjustments of each national sample in proportion to its share in the total population aged 15 and over, of the European Union or the respective subgroups. These post-stratification adjustments are based on EUROSTAT population figures and include the national weighting factors.

Ten European weights are provided for use in analyses of the European Union as a whole or in its different historical compositions, in each case excluding all other countries from calculation:

WEIGHT EUROPE 15 refers to the group of EU member countries after the 1995 enlargement; all other samples are excluded from calculation. **WEIGHT EUROPE 12** excludes Austria, Sweden and Finland from this group; **WEIGHT EUROPE 12 +** includes East Germany. **WEIGHT EUROPE 10** excludes Spain and Portugal (before 1986 enlargement); **WEIGHT EUROPE 9** in addition excludes Greece (before 1981 enlargement). **WEIGHT EUROPE 6** only refers to the six EC founder members: France, Belgium, Netherlands, West Germany, Italy, and Luxembourg. All other samples are excluded from calculation.

WEIGHT EURO +3 separates the three new members as of the 1995 enlargement, Finland, Sweden and Austria, as a country group. All other samples are excluded from calculation.

European **WEIGHT TOTAL + NORWAY** (W13) includes NORWAY in addition to the 15 member countries in EURO WEIGHT 15. This weight should be used for the analysis of the group of all EU member countries plus Norway as a whole. Iceland is only included in **WEIGHT TOTAL EU15 + NORWAY + ICELAND** (W17).

WEIGHT SPECIAL EURO ZONE (W15) separates the 11 countries which accepted to introduce the EURO, as of 01/01/99 (Belgium, Germany, Spain, France, Ireland, Italy, Luxembourg, the Netherlands, Austria, Portugal and Finland), W16 also includes Greece.
