12 Information about the interview
1 Overview

This codebook refers to the dataset ZA\_Persons and is part of the project PIAAC-L. PIAAC-L was funded by the Federal Ministry of Education and Research (Bundesministerium für Bildung und Forschung, BMBF; project reference number: \(1\) JP \(2\) A, B, C).

The codebook lists all variables contained in the dataset and gives information on a) the question(s) associated with the variable, b) additional information, especially for derived variables. For all variables with value labels, frequencies of these value labels are displayed. Due to space limitations, only up to \(30\) values are displayed. In case of omitted lines, the full list of codes can be found in the appendix. No frequencies are displayed for unlabeled numerical variables (e.g., years) or alphanumerical variables. The codebook is organized in \(2\) sections including this overview. Section \(2\) contains the identifier. The order of the variables in sections \(3\)-\(9\) follows the order of questions in the individual questionnaire. Sections \(3\)-\(8\) contain biographical information, including coded information on professional and educational information (KldB, ISCO, ...). In section \(9\), personal information is stored (for SOEP-users: this is comparable to the dataset "p" in the SOEP), also including coded information. Section \(10\) summarizes some generated variables (SOEP: pgen) and information on how these were derived. Section \(11\) includes re-scaled plausible values for the PIAAC \(2012\) competency scales. In section \(12\), some useful information about the interview can be found.

2 Identifier

There are four identifier, contained in every dataset of PIAAC-L: pnrfestid, hnrid, pnr and seqid. The pnrfestid is the global individual identifier for all individuals. As PIAAC-L follows a household-concept in the first wave, there is a household-Id (hnrid) to link the information to the dataset ZA\_Household. To link the information to the data of PIAAC \(2012\), please use the seqid. In some cases, the pnr, which is an index number of persons within the household has to be combined with the hnrid. The PIAAC-anchor person can be identified in different ways: first of all, the seqid which enables merging with the PIAAC \(2012\) data is only available for the PIAAC-anchor. Secondly, this person always has a pnrfestid that ends with the digit \(2\).

pnrfestid

- \(0\): Don't know
- \(1\): Refused
- \(2\): Don't know or refused
- \(3\): Valid skip
- \(4\): Not applicable
- \(5\): Not reached or not attempted
- \(6\): Implausible value or not determinable
- \(7\): Anonymized
- \(8\): Longitudinal missing

Global Identifier in all PIAAC-L Datasets for PIAAC-L anchor person and each person living in a household of a PIAAC-L anchor person.

This variable is designed to provide data on the industry of economic activity for all employed persons according to the Statistical Classification of Economic Activities in the European Community (Nomenclature statistiques des activités économiques dans la Communauté européenne - NACE). Respondents answer the question in their own words regarding the industry in which they are currently working, and this response is entered into a blank in the questionnaire. This information was coded into the variable pbra_ISICrev4, which corresponds to NACE Rev.2. See Appendix for a complete list of possible codes.

### Employment Status (emplst_14)

Are you currently employed? Which one of the following applies best to your status?

- Retirees or individuals in the federal volunteer service (“Bundesfreiwilligendienst”) who also work in addition to this, please state your job here.

<table>
<thead>
<tr>

<tbody>
<tr>
<td>Vocational training</td>
<td>Marginal, irregular part-time employment</td>

<tr>
<td>Not employed</td>
<td>Sheltered workshop</td>
</tr>
</tbody>
</table>

This variable emplst_14 is generated from the annual question on current employment status, which has a central filter function in the questionnaire to separate employed people from non-employed people for further questions. It is designed to provide consistent longitudinal data on employment status across all waves but currently only contains information of PIAAC-L. The category “not employed” comprises non-working individuals, those in military/community service, those on maternity leave, and employed persons in a phased retirement scheme (“Altersteilzeit”) whose current actual working hours are zero. The variable emplst_14 derives information from PIAAC-L survey and contains information of perw_14. The variable emplst_14 supplements the variable lfs_14 which differentiates among persons who are not employed.

### Job Change (jobch_14)

Have you changed jobs or started a new one since December 2012? This includes starting working again after a break!

This variable jobch_14 is generated from the annual question on job change, which has a central filter function in the questionnaire to separate employed people from non-employed people for further questions.
The variable jobch is a modified version of the variable erwtyp and is generated by using information from perw_14 and pwexl_14. jobch indicates whether a respondent has changed jobs since 2012. Unlike erwtyp (which describes the employment state for the current wave), the variable jobch can be updated in future waves. Note for SOEP users: PIAAC-L did not survey the type of job change (pwexl). Therefore code 0 ("first time employed") does not exist.

erwtyp_14

Are you currently employed? Which one of the following applies best to your status?

- Retirees or individuals in the federal volunteer service ("Bundesfreiwilligendienst") who also work in addition to this, please state your job here.

This variable is generated from information on employment (perw_14) and the question on whether a respondent has changed jobs (pwexl_14) since 2012, which is a central filter variable in the questionnaire. An alternative variable is jobch_14 (see above), which is an improved version of erwtyp_14, as it is generated in a longitudinally consistent way and contains an additional category for first-time employed persons. The codes 2 and 3 are not used in this variable. This is due to historical use of this variable in the SOEP (see SOEP documentation pgen).

How many hours do you actually work per week on average, including any overtime? // hours per week

This variable is designed to offer annual data on actual weekly working hours (including overtime) for all persons employed at the time of the survey (including the self-employed). The data are obtained by asking respondents how many hours they work on average per week. The variable \( \text{tatzeit}_1 \) derives information from \( \text{PIAAC-L} \) \( \text{erwtyp}_1 \) and \( \text{paz}_1 \). The value (-3) is assigned to employed people who did not answer, and (-5) is assigned to non-employed people. For implausible answers (actual weekly working hours of more than 50 per week), we assign the value (-7). The variable is rounded off and gives the number of working hours as a decimal number. Please also see \( \text{vebzeit}_1 \) and \( \text{uebstd}_1 \).
The variable vebzeit derives information from PIAAC-L erwtyp, paz, and psst. This variable is designed to offer data on agreed weekly working hours. The variable takes into account only those persons who were in dependent employment (not self-employed) at the time of the survey. Agreed weekly working hours were asked in three-digit form (counting the first digit after the decimal point). The value (-3) is assigned to employed people who did not answer, (-5) to non-employed people, employees without set hours, self-employed people, including self-employed farmers, and other self-employed persons. For implausible answers (agreed weekly working time of more than 80 hours per week) we assign the value (-7). The variable is rounded off and gives the number of working hours as a decimal number. Please also see tatzeit and uebstd.

uebstd derives information from PIAAC-L erwtyp, tatzeit, vebzeit, and psst. The value (-3) is assigned to employed people who did not answer, value (-5) is assigned to non-employed people, employees without set hours, and to self-employed people. If persons helping out in family businesses report overtime hours, we assign a regular, i.e. non-missing value. For implausible answers (agreed-upon weekly working time or actual weekly working time) we assign the value (-7).
Of more than 30 hours per week and weekly overtime of more than 10 hours) we assign the value (-7). The variable is rounded down and gives the number of overtime hours as a decimal. Please also see "erljob_14" and "tatzeit_14".

The variable ausb_14 is designed to provide annual data on required job training for all employed persons and contains information of the PIAAC-L 2014 survey. The variable is generated using questions on required formal education and required on-the-job-training which are categorized into up to seven independent variables with -1/1 coding. Out of these, the highest available level of required training is used for the generation of the status variable. The code (-5) is assigned to all non-employed persons and also includes persons in occupational training, in occupational retraining programs, and those doing...

4. Erwzeit_14 [Length of time with firm in years]

The variable erwzeit_14 is designed to offer data on the length of time with the firm at the point in time of the interview for all employed persons. It contains information of the variables pseitj_14, pseitm_14, pdatm_14 (variable is suppressed in PIAAC-L ͲͰͱʹ SUF), and takes information of the PIAAC-L ͲͰͱʹ survey. This variable is generated from the respondent’s start date with the current employer. In the case of a job change within the firm, the full length of time with the firm is calculated. Hence, the variable describes the length of time with the same firm and not the length of time in the same position. Both monthly (pseitm_14) and annual (pseitj_14) information is used in the variable and rounded off as length of time in years (with months in decimal form). If the month was not available a random month is used.

Have you been engaged in paid work during the last 7 days, even if this work was only for an hour or just a few hours? Please answer “yes” also if you normally would have worked in the last seven days, but because of holidays, sickness, bad weather, or other reasons did not do so.

Are you currently on maternity leave or statutory parental leave (“Elternzeit”)?

Are you currently using the statutory period of care (“Pflegezeit”) to care for a relative/family member?

Are you officially registered unemployed at the Federal Employment Agency (“Agentur fuer Arbeit”)?

Are you currently enrolled in an educational or a training program? In other words: Are you in school or higher education, working on a doctors degree, completing vocational training, or taking part in further training?

Are you currently employed? Which one of the following applies best to your status? Retirees or individuals in the federal volunteer service (“Bundesfreiwilligendienst”) who also work in addition to this, please state your job here.
Sometimes people have a side job alongside their main job or their activities as homemaker or student, or work beyond retirement. Do you do any of the following? Your main job described in the previous sections should not be included!

- Work in family business
- Regularly paid secondary employment
- Occasional paid work
- Non-working without further information
- Non-working, 65 and older
- Non-working, in training
- Non-working, on maternity leave
- Non-working, in (voluntary) military / community service

The variable lfs_z is based on the annual question on current employment status, combined with additional information on activities of non-working individuals. The number of values assigned is based on a large number of highly differentiated answer categories. It is designed to provide consistent longitudinal data on labor force participation across all waves. Currently lfs_z only derives information of PIAAC-L from the variables lgebmo_z (variable is anonymized in PIAAC-L SUF), lgeb_z, perw_z, palo_z, paus_z, paus_z, perz_z, ptag_z, pjob_z, pjob_z, pjob_z, pdatm_z (variable is suppressed in PIAAC-L SUF), and ppfleg_z. The variable lfs_z provides a differentiation between working (Codes 1-2) and non-working (Codes 1-9), categories which are constant over all waves. Non-employment is subdivided further in order to make it possible to efficiently apply different labor market concepts in studying the data. For respondents who have multiple status codes and different values for this variable, the following hierarchy was used to determine which of the values would play the determining role (increasing dominance):

- Working
- Non-working without further information
- Non-working, 65 and older
- Non-working, in training
- Non-working, on maternity leave
- Non-working, in (voluntary) military / community service
- Non-working, and registered unemployed
- Non-working, but sometimes second job
- Non-working, but working past 65 days
- Non-working, but regular second job

This variable gives the occupational autonomy for all employed persons. It offers an alternative to the ISCO-based scales on occupational status (ISCO) or prestige (SIOPS). autono_1 is the simplest variable based on the scales of "occupational position" in terms of its construction, and strongly correlated with the Treiman Prestige Scale (SIOPS). The basis for the "autonomy in occupational activity" scale is the classification of occupational position. Self-employed persons are categorized according to the size of the company (with the exception of farmers, who are all classified within the same category of autonomy, independent of farm size in hectares). Civil servants are differentiated according to the civil service laws defining each kind of activity and the amount of autonomy connected to it. Workers are differentiated according to their vocational training, and thus categorized hierarchically according to the different tasks they can be expected to
The value "\( \kappa \)" is assigned mainly to manual workers with a low level of status and a low level of autonomy. Group \( \kappa \) encompasses work in production, services demanding a minimal level of specialization, and farm work. Activities that require completion of the middle track of secondary education and entail a limited amount of responsibility are classified in Group \( \lambda \). Group \( \mu \) includes activities carried out either with or without supervision that require a degree from a college of applied sciences or university, but are not very high in prestige. Managers and freelance academics are both placed in Group \( \nu \) (highest autonomy). Depending on the number of employees, self-employed are categorized in Group \( \kappa \), Group \( \lambda \), or Group \( \nu \). The variable autono_\( \kappa \) \( \nu \) derives information from PIAAC-L-\( \kappa \) and contains information of the variables erwtyp_\( \kappa \), parb_\( \kappa \), pazubi_\( \kappa \), pang_\( \kappa \), psst_\( \kappa \), psstanz_\( \kappa \), pamt_\( \kappa \), and perw_\( \kappa \).
The variable stib_represents a compilation of all relevant information on current occupational position. It is generated by combining information on "occupational group", "unemployed (yes/no)", "military/community service", "in education (yes/no)", and "pensioner". A hierarchical scheme is used to determine which data is given precedence when a variety of divergent information exists (increasing dominance):

- N: Not employed
- I: Pensioner
- II: In education
- III: Military, community service
- IV: Unemployed, not employer
- V: Apprentice
- V: Self-employed
- VI: Manual laborer
- VII: Employee
- VIII: Civil service
- IX: Executive civil service
- X: Don't know
- XI: Refused
- XII: Don't know or refused
- XIII: Valid skip
- XIV: Not applicable
- XV: Not reached or not attempted
- XVI: Implausible value or not determinable
- XVII: Anonymized
- XVIII: Longitudinal missing

In stib_representing non-working persons are only assigned to the category (I) "pensioner" if they are recipients of retirement pension or if they are recipients of widow's pension AND are older than 60 years. See Appendix for a complete list of possible codes.

The variable expue_1 gives the length of time in years. If the year in which a spell started and ended is the same, a spell of 0.5 years is assumed. The given information is based only on the periods recorded in the dataset ZA.Calendar. Persons with no spell of unemployment are assigned the code (-1). The variable expue_1 contains information of the PIAAC-L survey only. Please also see expft_1 and exppt_1.

The variable isced_soep_nat reflects the highest German education according to ISCED 2011. It differs both from the classification in PIAAC 2012, as the questions on education differ as well as from SOEP-standard, as some classifications were changed and “other” qualifications were coded afterwards.

We would now like to ask you for some more detailed biographical information about your education and profession. First, your education:

The variable isced_soep_for reflects the highest foreign education according to ISCED. It differs both from the classification in PIAAC, as the questions on education differ as well as from SOEP-standard, as some classifications were changed and “other” qualifications were coded afterwards.

We would now like to ask you for some more detailed biographical information about your education and profession. First, your education:

The variable casmin enables comparison with international educational degrees/ diplomas. Taken into account are both secondary-level and university/college-level degrees and diplomas. Higher-level occupational degrees override the lower-level secondary school degrees. The variable casmin derives information from psbil, psbila, pbbil, pbbil2, and pbbila.

The variable bilzeit describes the amount of education or training in years.

We would now like to ask you for some more detailed biographical information about your education and profession. First, your education:

Where did you last attend school? Was it...

What type of school-leaving certificate did you attain?
The information is based on the PIAAC-L survey. The variable bilzeit is generated as follows: years of education = years of schooling + years of occupational training:

- **years of schooling**
  - no degree <= 7 years
  - lower school degree: 9 years
  - intermediate school: 10 years
  - degree for a professional college: 12 years
  - high school degree: 13 years
  - other: 15 years

- **years of occupational training**
  - additional occupational training (includes universities): 11 years
  - apprenticeship: 10 years
  - technical schools (incl. health): 9 years
  - civil servants apprenticeship: 10 years
  - higher technical college: 11 years
  - university degree: 12 years

Note that for a high school degree: 13 years of education are being taken into account, despite the changes of reducing high school by one year in most German federal states in the period 2001-2007. Furthermore, the introduction of a Bachelor/Master system in the German higher education system in the early 2000s is not yet reflected in the calculation of years in (higher) education.
What type of vocational / professional qualification or university degree did you attain and when did you attain it? // Technical or professionally oriented college ("Fachhochschule, Berufsakademie"; formerly also engineer or teacher training)

What type of vocational / professional qualification or university degree did you attain and when did you attain it? // University or university-level degree

What type of vocational / professional qualification or university degree did you attain and when did you attain it? // Doctoral studies (Promotion)

The variable field_全年 provides information on the field of education of tertiary degrees which adds details to the information recorded in the variable pbbil_全年. While the latter variable records if a person holds a degree field_全年 contains more detailed information on the type of the degree. Field_全年 summarizes information given in lab_14, lab_15, lab_16. Field_全年 prioritizes the highest tertiary degree attained. That means for individuals that report a doctoral degree (lab_16) and a university (lab_15) or applied university degree (lab_14), the variable field_全年 contains information on the doctoral degree only. Consequently, if there are individuals that report an applied university degree and a university degree, the variable contains information on the university degree only. Field_全年 contains information of PIAAC-W 2015 only.

The variable `pos_sib_14` contains the individual's position in the birth order of the siblings (biological and non-biological) recorded in the questionnaire. Both monthly (`lgebmo_14`, `lbsmo_14` - `lbsmo_10`; all variables are anonymized in PIAAC-L SUF) and annual (`lgeb_14`, `lbsj_14` - `lbsj_10`) information is used in the variable and it takes information of the PIAAC-L survey into account. If respondents had the same birth date as one of their siblings, the higher rank (i.e. the lower absolute value) in the birth order (e.g. 1 instead of 3) was assigned to the respondent. If both siblings were included in the dataset (as respondents) and lived in the same household, the sibling with the lower value of the personal identifier was assigned to the higher rank in the birth order. In cases were birth year of respondent and sibling were identical, but no information on the birth month of the sibling was given, the value -999 "Implausible value or not determinable" was applied. 11 Plausible Values PIAAC 2012 Competency Scales
PIAAC
assessed key adult competencies in the domains literacy, numeracy, and
problem solving. As a follow-up project to PIAAC
, the PIAAC-L project has re-scaled
the assessment data from PIAAC
, including both background data from PIAAC
as well as the new background information collected in PIAAC-Lin the new scaling
model. Thus,
new plausible values per domain were computed. Plausible values are
only available for anchor persons (participants in PIAAC
Germany). However, some
anchor persons who were administered a paper-based assessment in PIAAC
(and not
a computer-based assessment) had no plausible values for problem solving in PIAAC
– as a consequence, these respondents have no re-scaled plausible value in the PIAAC-Ldata set and are coded as system missings in PVPSL _ to PVPSL _ . Respondents

piaac-l:ZA

_Persons_


Persons who are not anchor persons (i.e. members of the anchor person's household who participated in PIAAC-L) are also coded as system missings in all plausible value variables, since they did not participate in PIAAC. The variables LITSTATUS, NUMSTATUS, and PSLSTATUS flag whether a person has a plausible value and indicate the reason why a person might not have a plausible value. For further information on the rescaling of the PIAAC assessment data see PIAAC-L documentation (forthcoming).
