German Longitudinal
Election Study

GLES 2009 **Pre- and Post-election** **Cross Section (Cumulation)** ZA5302, Version 6.0.2

Documentation of Questionnaire

The German Longitudinal Election Study (GLES) is a long-term project funded by the German Research Foundation (Deutsche Forschungsgemeinschaft) which started with the 2009 federal election. GLES is the largest and most ambitious election study held so far in Germany.

GLES 2009 was directed by four principal investigators: Prof. Dr. Hans Rattinger (University of Mannheim), Prof. Dr. Sigrid Roßteutscher (University of Frankfurt), Prof. Dr. Rüdiger Schmitt-Beck (University of Mannheim) Prof. Dr. Bernhard Weßels (Social Science Research Center Berlin) in close cooperation with the German Society for Electoral Studies (Deutsche Gesellschaft für Wahlforschung), and GESIS.

The following documentation refers to the pre and post-election cross section (ZA5302) of the GLES 2009 and will give you some general information about the dataset.

Bibliographic description of the dataset

Study No.	ZA5302
Title	Pre- and Post-election Cross Section (GLES 2009)
Current Version	6.0.2, 02/26/2019
Doi	10.4232/1.13230
Citation	Rattinger, Hans; Roßteutscher, Sigrid; Schmitt-Beck, Rüdiger; Weßels, Bernhard; Wagner, Aiko; Scherer, Philipp; Bytzek, Evelyn; Bieber, Ina (2019): Pre- and post-election Cross Section (GLES 2009). GESIS Data Archive, Cologne. ZA5302 Data file Version 6.0.2, doi:10.4232/1.13230.

Basic information

Funding Agency	German Research Foundation (Deutsche Forschungsgemeinschaft)
Data Collector	BIK MARPLAN, Offenbach
Date of collection	Pre-election: 08/10/2009 – 09/26/2009 Post-election: 09/28/2009 – 11/23/2009
Content	The first component of GLES composes a pre- and a post-election cross-section survey. A total of 4,290 interviews were realized (pre-election 2,173 and post-election 2,117). This documentation is about the pre and post-election cross section. The cross-sectional data also represent the first waves of a new long-term panel in the course of which the same respondents will be surveyed again in 2013 and 2017. 66.4 percent of the respondents in West Germany and 64.9 percent in East Germany agreed to participate in the panel.

Methodology

Geographic Coverage	Germany (DE)
Universe	The population comprises all persons with German citizenship resident in the Federal Republic of Germany, who had a minimum age of 16 years and lived in private households at the time the survey was being conducted.
Selection Method	Disproportional stratified multistage random sampling based on the ADM-design. All in all, 250 sampling points were drawn in West Germany with the aim to realize 1,400 interviews. 150 sampling points were drawn in East Germany to realize 700 interviews. As a result of this procedure, the East German population is overrepresented in the sample. The target person in the household was determined by Kish-Selection-Grid.

Mode of Data Collection	Computer Assisted Personal Interview (CAPI), with an average duration of approximately 60 minutes.
Field Work	<p><u>Pre-election cross section:</u></p> <p>All in all, 400 sampling points were drawn. In 374 sampling points, at least one interview could be realized. On average every interviewer surveyed at 2.2 sampling points. The interviewers realized 5.6 interviews per sampling point on average. The average number of attempts until successful contact was 1.6. In 14.7 percent of the cases, three or more attempts were necessary.</p> <p>By sending the respondents a postal request, in order to confirm that the interview had actually been held, twenty percent of the completed interviews could be verified. Overall, 34 interviews had to be deleted from the dataset, because the interviewers deviated too much from their designated sampling point.</p> <p><u>Post-election cross section:</u></p> <p>All in all, 406 sampling points were drawn. In 363 sampling points, at least one interview could be realized. On average every interviewer surveyed at 2.2 sampling points. The interviewers realized 5.6 interviews per sampling point on average. The average number of attempts until successful contact was 1.6. In 14.1 percent of the cases, three or more attempts were necessary.</p> <p>By sending the respondents a postal request, in order to confirm that the interview had actually been held, twenty percent of the 2,117 completed interviews could be verified. Overall, 40 interviews had to be deleted from the dataset: 3 because of negative interview confirmations and 37 because the interviewers deviated too much from their designated sampling point. Additional 2 cases had to be deleted not belonging to the universe.</p> <p><u>Both parts:</u></p> <p>The interviewers were compensated based on the number of completed interview. Additionally, they got their travel expenses and charges refunded.</p>
Response Rate	<p><u>Pre-election cross section:</u></p> <p>Of 4,740 drawn addresses, 12.5 percent dropped out because of sample neutral losses, 11.1 percent were not visited by interviewers, and in 1.3 percent of the cases the address was either not occupied, invalid, or communication was not possible due to language difficulties. This results in a cleared initial sample of 4,148 addresses. Based on that, 2,173 people were surveyed (1,424 in Western and 749 in Eastern Germany) resulting in a response rate of 52.4 percent.</p> <p><u>Post-election cross section:</u></p> <p>Of 4,668 drawn addresses, 11.8 percent dropped out because of sample neutral losses, 10.7 percent were not visited by interviewers and in one percent of the cases the address was either not occupied, invalid, or communication was not possible due to language difficulties. This results in a cleared initial sample of 4,118 addresses. Based on that, 2,117 people were surveyed (1,413 in Western and 704 in Eastern Germany) resulting in a response rate of 51.4 percent.</p>
Weights	<p>The pre- and post-election cross sections comprise three types of weights: design, transformation, and post-stratification weights.</p> <p>The “East-West weighting” (wei_ow) includes a special weight factor for the regions of Germany (East, including Berlin and West). This design weight corrects for the disproportional sample size of these regions.</p> <p>The second weight is the “Transformation weighting” (wei_tran) because the design of the study was based on a household sample. The transformation</p>

weight enables us to transform the data into a personal sample. This weight is based on the reduced household size (people in a household who belong to the population).

To ease working with both weights (east-west and transformation weight) at the same time, the “Combination Transformation and East-West weighting” (wei_trow) was created. In order to do this the dataset was first weighted with the transformation weight, and in a second step, the east-west weight was calculated again.

The “Sociodemographic and regional weights with (and without) transformation weight” create the third type of weights (post-stratification) provided in the dataset. Those weights were calculated by using the iterative proportional fitting (IPF). The iteration process ends when the difference between the weighted marginal distribution and the aimed distribution becomes smaller than 0.0001. To prevent large factors, the weights were trimmed (after each iteration) so that no weight is more than 5 times larger than the average weight. The weights were constructed on the basis of gender, age (4 groups: 16 to 29, 30 to 45, 45 to 59 and 60 years and older), education (three groups: low, middle, high), BIK-regions (three groups) and East (incl. Berlin) / West German federal states. Missing cases were replaced with the mode. There are 3x6 post-stratification weights in cumulated dataset: The pre-election and post-election cross sections both include two such weights for each of the following regions: Germany as a whole, East Germany and West Germany. The difference between the two weights for each region is, that one of them was calculated including the transformation weight and the other one not including it. Additionally, these weights were also calculated for the three regions in the cumulated dataset.

Data access

Usage regulations	Data and documents are released for academic research and teaching: access category A.
Anonymized data	According to German data protection laws, only anonymized data can be made accessible for public download. Based on this, some variables had to be deleted from the publicly available dataset. As a matter of course no information is lost: All variables can be used by interested researchers in a Secure Data Center (SDC) at GESIS (Cologne, Mannheim). Some variables are also available by signing a user contract. If you are interested in those variables please send an e-mail to gles@gesis.org . An overview of those variables can be found on our homepage (www.gesis.org/gles).

Errata

Pre-election cross section

- In 21 cases, year of birth (d201b) and age (q1a) did not correspond. These cases become tagged in the variable “problem1”.
- The variables “kand1” and “kand5” contained incorrect candidate names. All cases, in which the respondents were asked about the wrong candidates, were marked in the variables problem2 and problem3.
- In question d286a (Language spoken in household) a filter error occurred. Following the questionnaire only people who themselves *or* whose partners were born in a foreign country, were supposed to be asked. Because of the filter error, only those people who themselves *and* whose partners were born in a foreign country were asked. Furthermore, people who did not provide any information on their country of birth, did not have a partner or did not answer the partner question, were also asked question d286a.

Post-election cross section

- At the question D225 (“Country of birth mother”) one case gave the answer “Germany” as well as he gave an answer to the open option “Other Country”. Most probably this error occurred because the interviewer went back in the CAPI-software. In this case the value “Germany” was stored in the dataset and the case was tagged in the variable “problem4”.
- In 15 cases, year of birth (d201b) and age (q1a) in combination with the date of the interview (dat) did not correspond. These cases were tagged in the variable “problem1”.

In the Post-election survey two respondents reported not being eligible. Not belonging to the universe these cases were deleted from the dataset. The most recent errata list is provided by the GESIS Data Catalogue (www.gesis.org/dbk). There you can also find a list of all changes made between the different versions of the dataset.

Further Remarks

The data of this study are also available in single datasets (Pre-election cross section, ZA5300 and Post-election cross section, ZA5301).

You can find more information about GLES at <http://www.gesis.org/gles> or www.gles.eu/.

To get an overview of the use of our data, we kindly request users of GLES-data to inform us about publications that utilize those data. In case of limited access to your publication (e.g. conference papers), we would highly appreciate if you could send us an electronic (PDF file, gles@gesis.org) or a print copy of your publication (GESIS, GLES, Post Box 122155, 68072 Mannheim, Germany).

Please note:

As a public service to the international academic community, we provide English translations of GLES datasets, questionnaires, and related important documents. Due to specifics of the original documents in German and the fact that translations were not done by political scientists, the wording of established social and political science questions and constructs in these translations may occasionally deviate somewhat from the Standard English versions. If you have any questions concerning the translations, do not hesitate to contact the principal investigators or their collaborators. For an overview of the whole research team please have a look at the GLES website <http://www.gles.eu>. You can also send an e-mail to gles@gesis.org.

vn142	Justice/egalitarianism
Vw Q162	Pre-election Vw128
Nw Q160	Post-electionNw109

INT.: Display list. One response only.

Question Pre/Post:

And now, some statements about what might be considered fair in Germany. Please tell me, using this scale from - 2 to + 2, whether you agree or disagree with each statement. -2 means that you strongly disagree and +2 means that you strongly agree. Use the values in between to express your opinion more precisely.

- (A) People are only willing to take on additional responsibility at work if they are paid more.
- (B) The state should guarantee a minimum standard of living for all.
- (C) It's quite alright that some people can afford to pay for a better education for their children.
- (D) The state should fix an upper income limit.
- (E) It's quite alright that some professions are regarded as more prestigious than others.
- (F) It is fair enough that enterprisers make large profits because everybody benefits in the long run.

(1) -2 Strongly disagree
 (2) -1 Disagree
 (3) 0 Neither agree nor disagree
 (4) +1 Agree
 (5) +2 Strongly agree

 (98) Don't know
 (99) No answer

v300	Fairness of the distribution system
Vw Q163	Pre-election Vw159

INT.: Display list. One response only.

Question Pre:

Here are three more statements we would like to know whether you agree with or not. Please use the last scale again.

- (A) Everybody has the same opportunities for getting ahead in Germany today.
 (B) In Germany today, everyone is paid for the contribution he/she makes.
 (C) In Germany today, everybody gets what he/she need to live on.

- (1) -2 Strongly disagree
 (2) -1 Disagree
 (3) 0 Neither agree nor disagree
 (4) +1 Agree
 (5) +2 Strongly agree

- (98) Don't know
 (99) No answer
 (102) Not applicable (wave)
