## About this Supplement to ALLBUS/GGSS 2016

---

This document contains frequency tables by sex of respondent for the data of ALLBUS/GGSS 2016. The data in these tables is weighted by *wghtpew* (person-related East-West weight). This weight adjusts for the oversample of respondents in the new federal states. Therefore, the numbers in the sum-columns are directly interpretable for Germany as a whole.

For more information on weighting ALLBUS/GGSS data, please refer to:

## Note for Publications Using ALLBUS/GGSS Data

---

Usage and analysis of research data as well as any publication of research results based on such data should be connected with information on the data generator, the data source and an identification of the dataset. GESIS Data Archive for the Social Sciences therefore suggests the following minimum standard for the scientific citation of its data sets. Example for release 1.0.0:

## Total Population and Sample:

Geographic Coverage: Federal Republic of Germany

Person sample:

- Universe Sampled: All persons (German and non-German) who resided in private households and were born before 1 January 1998.
- Selection Method: Two stage disproportionate random sample in western Germany (incl. West Berlin) and eastern Germany (incl. East Berlin). In the first sample stage municipalities (Gemeinden) in western Germany and municipalities in eastern Germany were selected with a probability proportional to their number of adult residents; in the second sample stage individual persons were selected at random from the municipal registers of residents. Targeted individuals who did not have adequate knowledge of German to conduct the interview were treated as systematic unit non-responses.

## Method of Data Collection:

Personal, oral interview with standardized questionnaire (CAPI – Computer Assisted Personal Interviewing) and two additional self-completion questionnaires (CASI – Computer Assisted Self-Interviewing) for ISSP (split questionnaire design).

**Primary Sampling Units / Sample-Points:**

West:	111 Sample-Points (in 104 municipalities)
East:	51 Sample-Points (in 45 municipalities)
Total:	162 Sample-Points (in 149 municipalities)

**Response Rate:**

West:	34.2 %
East:	36.6 %
Total:	34.6 %

**Data Set:**

Number of respondents:	3490
Number of variables:	793

**Further Notes:**

Respondents from the area of the new federal states are oversampled.

The data pertaining to the open-ended question F027 in which respondents were asked which groups they associate with the phrase "foreigners living in Germany" ("in Deutschland lebende Ausländer") were published in a supplementary data set (ZA5254).

A second version of this data set (589 variables) with a shortened demography module is additionally available as ALLBUScompact 2016 (German version: ZA5251; English version ZA5253).

A Digital Object Identifier (DOI) for use in data citations is supplied as part of the data set.

## Notes on the Additional ALLBUS/GGSScompact 2016 (Study No. 5253)

---

As an alternative to ALLBUS/GGSS 2016 with its relatively complex demography module, GESIS also offers an additional compact version with a reduced number of demographic variables. Providing an easily manageable selection of basic demographic descriptors, this ALLBUS/GGSScompact addresses, amongst others, the needs of newcomers to data analysis. Moreover, access conditions for ALLBUS/GGSScompact are less strict than for the more extensive ALLBUS/GGSS data, because data protection issues are less salient.

However, for reasons of data protection some of the remaining demographic data still had to be simplified. A comprehensive account of recodes can be found in the next section of this document.

Apart from demography, all other questions have been retained in full in the compact version. Moreover, variable labels and variable numbers in ALLBUS/GGSScompact are the same as in the unabridged ALLBUS/GGSS data set. In this way, users may easily move between both versions of the ALLBUS/GGSS data if necessary.
