Flash Eurobarometer 266
February 2009
Women and European Elections

ARCHIVE INFORMATION AND ERRATA

- UNIQID: A unique serial id was appointed by the archive.
- REGION: Official NUTS classification in this variable has been specified by the archive in accordance with the corresponding official NUTS classification, former Flash EB waves, and the technical report. The 13 categories for GREECE could not be clearly specified in accordance with NUTS 2. The four NUTS1 categories were reconstructed by the archive based on the corresponding frequency distribution documented in the technical evaluation report and in accordance with former waves. Variable NUTS1 also recodes NUTS1 levels for Belgium and the Netherlands.
- D3 (AGE EDUCATION): Please notice 22 outliers coded (>1) and (<7).
- PLEASE NOTICE that Flash Eurobarometer 266 in addition to the general population sample (n=500 per country) includes an oversample of WOMEN (n=1000 per country). There are two sets of WEIGHTING variables which produce representative results OR for MALE (M) OR for FEMALE (F) respondents. There is no split and/or weight available for making the samples representative for the general population. For details see the technical specifications annexed to the basic questionnaire.
