German Longitudinal
Election Study

GLES 2013

Campaign Media Content Analysis, TV

ZA5705, Version 1.0.0

Methodology Report

Please note: Working with GLES data

This publication and the corresponding data set are data of the German Longitudinal Election Study (GLES), which are released by GESIS in cooperation with the German Society of Electoral Research (Deutsche Gesellschaft für Wahlforschung, DGfW). Despite thorough controlling and statistical processing of the data, GESIS and the DGfW cannot guarantee that this release will satisfy all demands. Mistakes will immediately be announced via the GLES mailing list and are documented in the data catalogue's errata list (www.gesis.org/dbk).

If you discover an error whilst working with GLES data, we would highly appreciate you informing us via e-mail (gles@gesis.org). Please send us the description of the error, the study number (ZA-number), as well as the version of the data set you are using.

We recommend using the latest version of GLES data at all times. They can be downloaded via the GESIS data catalogue. Links to the direct download can also be found on the GESIS website (www.gesis.org/gles).

Announcement of publication with GLES data

To gain an overview of the actual use of the data, we kindly request users of GLES data to inform us about publications that utilize those data (bibliographic notice, study no. of the used data set). Publications which are completely or partially based on GLES data will be listed in the official bibliography of GLES. In case of limited access to the publication (e.g. conference papers), we would highly appreciate it if you sent us a PDF-file or a print copy of your publication.

1 Research problem, conception and methods of the study

1.1 Context of study

The analysis of TV news is part of the project “German Longitudinal Election Study (GLES). Dynamics of voting behaviour – A long-term study of change and stability in the German electoral process” which is steered by Prof. Dr. Rüdiger Schmitt-Beck at the University of Mannheim. The analysis of TV news aims at collecting media data concerning the campaign of the Federal election 2013 which can be systematically combined with the survey data of the election study.

Period of observation

23 June to 21 September 2013 (90 days).

Material of observation

Evening newscasts of the main German television broadcaster: ARD/Das Erste, ZDF, RTL and Sat.1 (complete collection during the observation period).

Central dimensions of study

- Theme structure of news coverage of election campaign,
- Presence and thematization of political actors,
- Evaluation of political actors,
- Statements concerning electoral chances of political actors,
- Coalition statements.

Recording units

The study is conducted on two levels: a first group of variables will be coded on the level of the journalistic news stories, a second group on the level of statements within news stories.

1.2 Case selection: Structure of the sample

The analysis includes all news stories which have been broadcasted in the selected newscasts during the observation period. First some formal criteria will be identified for each news story. Afterwards only those news stories referring to *German politics* or *German political actors* are subject to an in-depth analysis and coding in terms of content (criteria of inclusion).

The two criteria of inclusion are not congruent, but overlapping. News stories covering German politics unrelated to German political actors are possible as well as news stories concerning German political actors unrelated to German politics.

Furthermore one has to distinguish between news stories related to the Federal election 2013 (and its campaign) and general political news stories. It is possible to identify the several case groups by an appropriate filtering.

1.3 Case definition: Recording units

On the **first level** of the study, journalistic news stories will be identified and coded as cases or recording units. A journalistic news story is characterized by two criteria: a specific formal sort of presentation ("journalistic form of presentation") and a specific subject in terms of topic and content. When defining a recording unit and differentiating it from other recording units these two criteria have to be seen as interrelated.

In our news analysis the recording units are empirically identified by the following variables:

- (1) Variable B08 regards the journalistic form of presentation,¹
- (2) Variables B09 resp. B12, B14 and B16 regard the main subject in terms of topic and content.

Principles

When identifying journalistic news stories and delimiting them from other sequences of newscasts (Opening / closing credits, purely formal moderations etc.), the criterion of independence in terms of topic and content is applied while taking into account the variables mentioned above (cf. the first filter variable of the news analysis, B02).

The identification and reciprocal delimitation of the single journalistic news stories is realized by following the chronological course of the newscasts. Basically a new recording unit begins when the journalistic form of presentation or the subject changes in terms of topic and content.

Journalistic form of presentation of the news story

The categories of form of the recording units will be defined by the codes of variable B08. If the form of presentation changes according to the categories, a new recording unit will be constructed.

Main subject of the news story

The codes of variables B12, B14 and B16 as shown in *List 1: Issues* constitute a very sophisticated system of categories which allows defining rather exactly the main subject of a recording unit as regards topic and content.

Summary

Basically, an interrelation between form and content can be taken for granted: one reports on a particular subject in a particular form.

If the subject stays the same, but the form changes (e.g. a short film is completed by a telephone interview), this will lead to the construction of a new recording unit.

If news stories with the same form (e.g. news read out by an anchorman) report about different issues or events, this leads in accordance to the available codes of the respective variables to the construction of new recording units.

First, some formal criteria will be identified for each news story. Afterwards only those news stories fulfilling the criteria of inclusion and referring to *German politics* or *German political actors* are subject to an in-depth analysis and coding in terms of content.

On the **second level** of observation, all news stories fulfilling the criteria of inclusion are submitted to an in-depth analysis. The recording units belonging to this level of analysis are three groups of statements with different content appearing in the news stories; these groups will be defined as recording units, selected and coded according to a criteria catalogue specific to the respective group

Statement group 1: evaluations of German political actors

The recording units in this statement group are defined according to the following criteria of inclusion: subject of statement (all manifestations of the list of actors), object of evaluation (only all manifestations of the list of actors concerning the German political actors), explicit evaluation as well as two other variables concerning the context of the evaluation (policy point of reference and policy issue).

¹ For these variables cf. chapter 3–6.

Statement group 2: statements on the electoral chances of German political actors

The recording units in this statement group are defined according to the following criteria of inclusion: subject of statement (all manifestations of the list of actors), object of statement (chancellor candidates, parties and coalition constellations), two variables on the assessment of electoral chances (static and dynamic) as well as two complementary variables (explication of the nature of electoral chance, reference to survey results).

Statement group 3: coalition statements

The recording units in this statement group are defined according to the following criteria of inclusion: subject of statement (only actors attributed to one of the parties concerning the respective coalition statement), object of statement (possible coalition constellations) and a statement to a possible coalition constellation (coalition statement).

The manifestations of the variables enumerated in each statement group constitute the background /variance for the construction of recording units on the second level of study. It applies to all three statement groups that changes in at least one of the relevant variables which define these statements lead to the construction and the coding of new recording units.

When executing the coding practically it is important to proceed to a sequential coding and to register the recording units of the three statement groups one after the other

1.4 Number of cases of the study

Out of 364 newscasts during the observation period 5.232 news stories have been identified, 4.631 of which were thematically classifiable. The other 601 news stories are formal moderations, opening / closing credits etc. Among the thematically classifiable news stories 1.060 have been included in the in-depth analysis.

Number of newscasts	364
Number of news stories	5.232
thereof: news stories thematically not classifiable	601
thereof: news stories thematically classifiable	4.631
Number of news stories taken into in-depth analysis	1.060
Number of news stories with <i>at least</i> one evaluation of German political actors <i>or</i> a statement to the electoral chances of German political actors <i>or</i> a coalition statement	351
Number of statements	1.066
thereof: statement group 1: Evaluations of German political actors	718
thereof: statement group 2: statements about electoral chances in Germany	313
thereof: statement group 3: coalition statements	35

Within 351 of the 1.060 news stories, a relevant statement could be identified. Overall 1.066 statements were coded in these news stories: 718 evaluations of German political actors (statement group 1), 313 statements to electoral chances (statement group 2) and 35 coalition statements (statement group 3).

1.5 Execution of the coding

The coding was distributed among three coder groups:

- Group 1 collected the basic data of the newscast and construed the case structure concerning the news story (variables V01–V08. B01–B09),
- group 2 carried out the thematization analysis and the coder ranking (variables B10–B20),
- group 3 carried out the analysis of the statements (variables S01–S32). Within this group two coders (coders 8 and 12) identified statements being part of statement groups 1 to 3. Subsequently, these statements were coded by two further coders.

The material to be coded was assigned randomly. First, group 1 identified newscasts that fulfilled the criteria of inclusion (German politics or German political actors). For the in-depth analysis, these news items were randomly assigned to the coders belonging to groups 2 and 3. The coding was carried out parallel by group 2 and 3.

2 The reliability of the coding

2.1 Elucidations of the reliability tests

After reaching good intercoder reliability values in the pre-tests the training was finished. With the beginning of the coding, reliability tests were carried out in three stages in order to control the coding permanently and to document it methodically: at the beginning of the coding, in the middle of the coding process and at the end of the coding-phase.

- Coder group 1 (formed by four male and female coders) identified the recording units at level of news stories and coded them with respect to formal data. Each of the reliability tests included six newscasts, which were chosen randomly from the period of observation.
- Coder group 2 (formed by four female coders) was responsible for identifying the subject and carrying out the coder ranking. The material that had to be coded in all three tests was selected half randomly half systematically. The systematic selection of half of the reliability material was necessary to ensure that there was a sufficient basis for comparison even for seldom variables in order to evaluate the test values. Overall about ten percent of the material under examination has been coded in the reliability tests. 35 news stories were coded in tests 1 and 2; test 3 was based on 34 recording units.
- Coder group 3 (formed by four male and female coders) carried out the statement analysis. The material that had to be coded in all three tests was selected half randomly half systematically. The identification of the recording units and the statement coding were tested separately. All three reliability tests were based on 35 news stories each.

The results of the single tests formed the basis for calculating the overall values for each group and test dimension. The following tables show the results of the reliability tests: first the overall values and then the values from the single test stages. In order to present the reliability of the coding in a differentiated way, specific variables were completed by the values of a simplified recoding.

For the tests of the coding of the recording units two coefficients are indicated in the tables: the Krippendorff's Alpha coefficient and the Holsti's index.²

In order to interpret the values, the number of cases in which the variable had to be coded is indicated for each variable and test. Krippendorff's Alpha leads to small coefficients because of the algorithm when the variables have a low variance. This is particularly the case with variables which show only rarely a value above zero and are therefore coded in the majority of the cases with zero (e.g. B17a). For this reason, it is indicated in the column "Coding" how often a value was coded non-zero.

2 About the characteristics of these values cf. Krippendorff, Klaus (2004): Reliability in Content Analysis. Some Common Misconceptions and Recommendations. In: Human Communication Research, Vol. 30. Nor 3. pp. 411-433 and Lombard, Matthew / Jennifer Snyder-Duch / Cheryl Campanella Bracken (2004): A Call for Standardization in Content Analysis Reliability. In: Human Communication Research, Vol. 30. Nor 3. pp. 434-437.

2.2 Results of the reliability tests – Overall values

Identification of recording units from the news stories (coder group 1)

	Cases	VÜ ¹
Constitution of news stories	261	93.5

1 Percentage of recording units coded identically by all four coders participating in the test.

Coding of formal data at level of news stories (coder group 1)

Var.	Name	Cases	Cod. ¹	a ²	Holsti

	<i>Recoding: 1.2=1; 3.4=2</i>	13	26/26	.85	.92

³ The seemingly bad values for Krippendorff's alpha are due to a very small variance within the cases tested. Single deviations from the appropriate coding strongly impact on the Krippendorff's alpha value and markedly reduce it. However, the percent agreement is satisfactory. This equally applies to the results of the single tests shown below.

2.3 Results of the reliability tests – Values from the single tests

Constitution of recording units at level of news stories (coder group 1)

	Current test 1		Current test 2		Final test	
	Cases	VÜ ¹	Cases	VÜ ¹	Cases	VÜ ¹
Formation of news stories	94	89.4	84	95.3	83	95.2

1 Percentage of recording units coded identically by both coders participating in the test.

Coding of formal data at level of news stories (coder group 1)

3 Plan of variables

Coder_vs Coder of the variables for the newscast and the constitution of news stories

1. Analysis of the newscasts

Formal data

ID_sdg	ID of the newscast
V01	Title of the newscast/numeric
V02	Title of the newscast/alphanumeric
V03	Year
V04	Month
V05	Day
[V06	Beginning of the newscast]
V06m	Minute
V06s	Second
[V07	End of the newscast]
V07m	Minute
V07s	Second
V08	Duration of the newscast in seconds

2. Analysis of news stories

ID_bei	ID of the news story
B01	Current number of the news story in the respective newscast
B02	1st filter variable news story analysis: <i>thematically classifiable news story?</i>
[B03	Beginning of the news story]]
B03m	Minute
B03s	Second
[B04	End of the news story]
B04m	Minute
B04s	Second
B05	Duration of the newscast in seconds

Filter variable politics

B06	2nd filter variable news story analysis: <i>does the news story refer to German federal politics or German political actors (codes 1000-1400)?</i>
B07	Announcement of the news story
B08	Journalistic form of presentation
B09	Main subject of the news story: alphanumeric

Thematization analysis (1): thematization of politics, polity and policy

Coder_bei	Coder of the thematization analysis and the coder ranking (group 2)
B10	Main subject of the news story: politics, polity, policy issue?
B11	Reference to politics issues?
B12	If yes: politics issue
B13	Reference to polity issues?
B14	If yes: polity issue
B15	Reference to policy issues?
B16	If yes: policy issue

Thematization analysis (2): policy positions

(3a) Thematization of positions in the debate about welfare-state services

B17a	Welfare-state services
------	------------------------

(3b) Thematization of positions in the debate about taxes and duties

B17b	Fiscal policy
------	---------------

Thematization analysis (3): Reference points of the news story

B18a	Does the news story refer to the Federal election 2013?
B18b	Explicit reference to the TV debate
B18c	Explicit reference to survey results concerning the Federal election 2013
B18d	Central event as cause of reporting

Thematization analysis (4): German political actors

B19a	Angela Merkel: chancellor
B19b	Angela Merkel: other roles
B19c	Other politicians or boards CDU: institutional (roles)
B19d	Other politicians or boards CDU, CDU in general: other (roles)
B19e	Other politicians or boards CSU: institutional (roles)
B19f	Other politicians or boards CSU, CSU in general: other (roles)
B19g	CDU/CSU (Union parties resp.) in general
B19h	Rainer Brüderle: Leader of parliamentary party group
B19i	Rainer Brüderle: other roles
B19j	Other politicians or boards FDP: institutional (roles)
B19k	Other politicians or boards FDP, FDP in general: other (roles)
B19l	Federal government in general
B19m	Peer Steinbrück: member of the German Federal Parliament
B19n	Peer Steinbrück: other roles
B19o	Other politicians or boards SPD: institutional (roles)
B19p	Other politicians or boards SPD, SPD in general: other (roles)
B19q	Jürgen Trittin: Leader of parliamentary party group

B19r	Jürgen Trittin: other roles
B19s	Other politicians or boards Bündnis 90/Die Grünen: institutional (roles)
B19t	Other politicians or boards Bündnis 90/Die Grünen, Bündnis 90/Die Grünen in general: other (roles)
B19u	Gregor Gysi: leader of parliamentary party group
B19v	Gregor Gysi: other roles
B19w	Other politicians or boards Die Linke: institutional roles
B19x	Other politicians or boards Die Linke, Die Linke in general: other (roles)

Coder rating: overall tone of the news story

B20a	Angela Merkel
B20b	CDU
B20c	CSU
B20d	Peer Steinbrück
B20e	SPD
B20f	Rainer Brüderle
B20g	FDP
B20h	Jürgen Trittin
B20i	Bündnis 90/Die Grünen
B20j	Gregor Gysi
B20k	Die Linke
B20l	Coalition CDU/CSU and FDP, federal government
B20m	Grand coalition (CDU/CSU und SPD)
B20n	Coalition SPD and Bündnis 90/Die Grünen

3. Statement analysis

Formal data

Coder_a	Coder of the statement's analysis (group 3)
ID_aus	ID of statement
S01	Current number of statement per news story
S02	Central filter of statement analysis: statement group

Statement group 1: evaluations of German political actors

S10	Statement's subject
S11	Object of evaluation
S12	Tendency of evaluation
S13	Policy reference point
S14	If specific policy competence: policy issue?

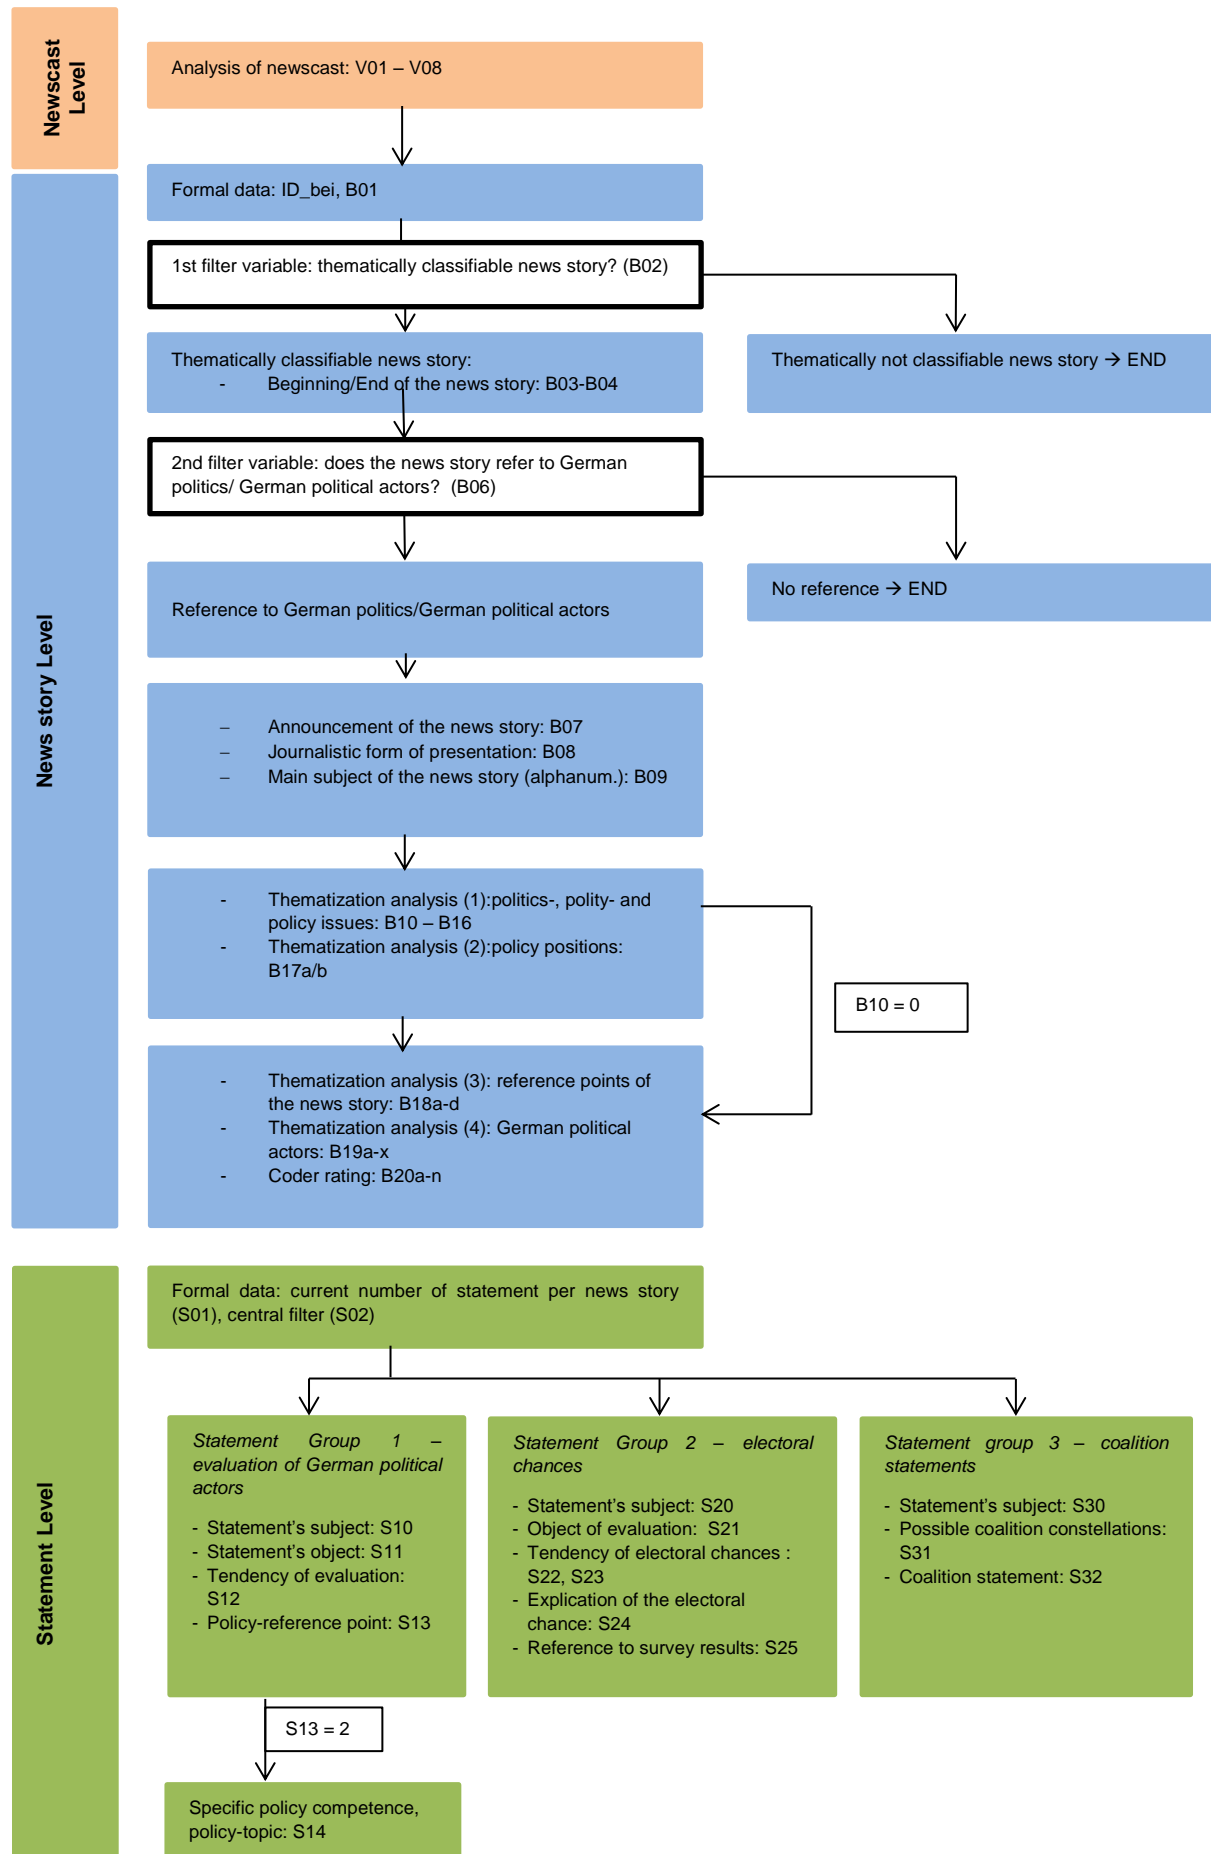

Statement group 2: statements about electoral chances in Germany

S20	Statement's subject
S21	Statement's object
S22	Assessment of electoral chances – static
S23	Assessment of electoral chances – dynamic
S24	Explication of the electoral chance
S25	Reference to survey results

Statement group 3: coalition statements

S30	Statement's subject
S31	Possible coalition constellations
S32	Coalition statement

4 Overview of variables' structure and filtering

5 Code plan

Group 1

Coder_vs **Coder of the variables of the newscast and the constitution of the news stories**

1 Maïke Haas

2 Ina Leinert

3 Marina Petritschuk

4 Tim Runck

1. Analysis of the newscast

Formal Data

ID_sdg **ID of the newscast**

= V01, V03, V04, V05

V01 **Title of the newscast/numeric**

ARD/Das Erste

11 Tagesschau

ZDF

21 heute

RTL

31 RTL aktuell

Sat.1

41 Sat.1 Nachrichten

V02 **Title of the newscast/alphanumeric**

V03 **Year**

13 2013

V04 **Month**

06 June

07 July

08 August

09 September

V05 **Day**

01

...

31

[V06 **Beginning of the newscast]**

V06m **Minute**

V06s **Second**

[V07 **End of the newscast]**

V07m **Minute**

V07s **Second**

2. Analysis of news stories

ID_bei	ID of the news story	
	= ID_sdg, B01	
B01	Current number of news story in the respective newscast	
B02	1st filter variable news story analysis: thematically classifiable news story?	
1	Thematically classifiable news story (at least 3 sec.)	
2	Thematically not classifiable news story (at least 15 sec.)	⇒ End
[B03	Beginning of the news story]	
B03m	Minute	
[B03s	Second]	
[B04	End of the news story]	
B04m	Minute	
B04s	Second	
B05	Duration of the news story in seconds	

Filter variable politics

B06	2nd filter variable news story analysis: <i>does the news story refer to German politics or to German political actors (codes 1000 – 1400)?</i>
1	Yes: German politics is main topic/German political actor in main role ⇒ Continue (with in-depth analysis)
2	Yes: German politics is secondary topic/German political actors in secondary role ⇒ Continue (with in-depth analysis)
9	No: no politics/no German political actor ⇒ End
B07	Announcement of the news story
0	News story was not announced
1	News story was announced
B08	Journalistic form of presentation
1	News story presented by the anchorman
2	News story within a film (“NIF”)
3	News story as a film
4	On location/stand-ups/reporter on site
5	Interview/talk (in the studio, on location, interview by phone)
6	Commentary
7	Independent moderation

9	Other
B09	Main subject of the news story: alphanumeric

Group 2

Thematization analysis (1): politics, polity and policy issues

Coder_bei Coder of the thematization analysis and of the coder ranking (group 2)

5 Pauline Beck

6 Vanessa Cann

7 Isa Ihle

8 Lena Schackmann

B10 Main subject of the news story: politics, polity, policy issue?

0 No politics, polity or policy issue or event ⇒ Continue with B18a

1 Politics issue and event (cf. list 1: codes 1000)

2 Polity issue and event (cf. list 1: codes 2000)

3 Policy issue and event (cf. list 1: codes 3000/4000)

B11 Reference to politics issues?

0 No ⇒ Continue with B13

1 Main aspect ⇒ Continue with B12

2 Secondary aspect ⇒ Continue with B12

B12 If yes: politics issue

1000-1700 politics issue according to list 1

B13 Reference to polity issues?

0 No ⇒ Continue with B15

1 Main aspect ⇒ Continue with B14

2 Secondary aspect ⇒ Continue with B14

B14 If yes: polity issue

2000-2500 polity issue according to list 1

B15 Reference to policy issues?

0 No ⇒ Continue with B17a

1 Main aspect ⇒ Continue with B16

2 Secondary aspect ⇒ Continue with B16

B16 If yes: policy issue

3000-4500 policy issue according to list 1

Thematization analysis (2): policy positions

(3a) Thematization of positions in the debate about welfare-state services

B17a Welfare-state services

- 0 No reference to welfare-state services
- 1 Neither extension nor cutting back of welfare-state services is thematized
- 2 Extension of welfare-state services is thematized
- 3 Cutting back of welfare-state services is thematized
- 4 Extension and cutting back of welfare-state services are thematized

(3b) Thematization of positions in the debate about taxes and duties

B17b Fiscal policy

- 0 No reference to fiscal policy
- 1 Neither increase nor decrease of taxes and/or duties is thematized
- 2 Increase of taxes and/or duties is thematized
- 3 Decrease of taxes and/or duties is thematized
- 4 Increase and decrease of taxes and/or duties are thematized

Thematization analysis (3): reference points of the news story

B18a Does the news story refer to the Federal election 2013?

(Including the Federal election campaign, cf. list 1: codes 1200-1460)

- 0 No
- 1 Yes

B18b Explicit reference to the TV debate

- 0 No
- 1 Yes

B18c Explicit reference to survey results concerning the Federal election 2013

- 0 No
- 1 Yes

B18d Central event as cause of reporting

- 0 Event is not included in list 3
- 01-43 Event is included in list 3

Thematization analysis (4): German political actors

B19a	Angela Merkel: chancellor
B19b	Angela Merkel: other roles
B19c	Other politicians or boards CDU: institutional (roles)
B19d	Other politicians or boards CDU, CDU in general: other (roles)
B19e	Other politicians or boards CSU: institutional (roles)
B19f	Other politicians or boards CSU, CSU in general: other (roles)
B19g	CDU/CSU (Union parties resp.) in general
B19h	Rainer Brüderle: leader of parliamentary party group
B19i	Rainer Brüderle: other roles
B19j	Other politicians or boards FDP: institutional (roles)
B19k	Other politicians or boards FDP, FDP in general: other (roles)
B19l	Federal Government in general
B19m	Peer Steinbrück: member of the German Federal Parliament
B19n	Peer Steinbrück: other roles
B19o	Other politicians or boards SPD: institutional (roles)
B19p	Other politicians or boards SPD, SPD in general: other (roles)
B19q	Jürgen Trittin: leader of parliamentary party group
B19r	Jürgen Trittin: other roles
B19s	Other politicians or boards Bündnis 90/Die Grünen: institutional (roles)
B19t	Other politicians or boards Bündnis 90/Die Grünen, Bündnis 90/Die Grünen in general: other (roles)
B19u	Gregor Gysi: leader of parliamentary party group
B19v	Gregor Gysi: other roles
B19w	Other politicians or boards Die Linke: institutional roles
B19x	Other politicians or boards Die Linke, Die Linke in general: other (roles)

For the variables B19a-x the following codes are applicable:

0	Does not occur
11	Appears in the first place and in sound bite
12	Appears in the first place and is quoted/thematized
21	Appears in the second/third etc. place and in sound bite
22	Appears in the second/third etc. place and is quoted/thematized

Coder rating: overall tone of the news story

B20a	Angela Merkel
B20b	CDU
B20c	CSU
B20d	Peer Steinbrück
B20e	SPD
B20f	Rainer Brüderle
B20g	FDP
B20h	Jürgen Trittin
B20i	Bündnis 90/Die Grünen
B20j	Gregor Gysi
B20k	Die Linke
B20	Coalition CDU/CSU and FDP, federal government
B20m	Grand coalition (CDU/CSU and SPD)
B20n	Coalition SPD and Bündnis 90/Die Grünen

For the variables B20a-n the following codes are applicable:

0	Actor is not thematized (as one of the first three actors)
1	Unambiguously positive
2	Rather positive
3	Ambivalent/positive as well as negative
4	Rather negative
5	Unambiguously negative
9	Neutral/no tendency

3. Statement analysis

Group 3

Formal data

Coder_a **Coder of the statement analysis (group 3)**

9 David Grundmanns

[10 Max Keller]

11 Nicolas Loevenich

[12 Yvonne Sobotko]

ID_aus **ID of statement**

= ID_bei, S01

S01 **Current number of statement per news story**

S02 **Central filter statement analysis: statement group**

1 Statement group 1: evaluations of German political actors

⇒ Continue with S10

2 Statement group 2: statements about electoral chances

⇒ Continue with S20

3 Statement group 3: coalition statements

⇒ Continue with S30

Statement group 1: evaluations of German political actors

S10 **Statement's subject**

1000-7800 Subject according to list 2

S11 **Object of evaluation**

nnnn Cf. list 2: codes 1000-1800 and 3000-4000

S12 **Tendency of evaluation**

1 Negative

2 Positive

S13 **Policy reference point**

1 General policy competence

⇒ End

2 Specific policy competence

⇒ Continue with S14

9 No policy reference point of the evaluation

⇒ End

S14	If specific policy competence: policy issue?
31	Foreign affairs
33	Defense
34	Internal security
35	Infrastructure
36	Environment
37	Social policy
38	Labor market policy
39	Economic policy
41	Education policy
42	Cultural policy and leisure policy
43	Finance
44	East Germany
45	Other specific topic with reference to policy issues

Statement group 2: statements about electoral chances in Germany

S20 Statement's subject

1000-7800 Subject according to list 2

S21 Statement's object

Chancellor candidates

11 Angela Merkel

12 Peer Steinbrück

Parties

21 CDU/CSU

22 SPD

23 Bündnis 90/Die Grünen

24 FDP

25 Die Linke

26 AfD

29 Other parties

Coalitions

31 Coalition CDU/CSU and FDP (black-yellow)

32 Grand coalition (CDU/CSU and SPD)

33 Coalition SPD and Bündnis 90/Die Grünen (red-green)

34 Social liberal coalition (SPD and FDP, red-yellow)

35 Coalition SPD, Bündnis 90/Die Grünen and Die Linke (red-red-green)

36 Coalition SPD, FDP and Bündnis 90/Die Grünen (red-yellow-green)

37 Coalition CDU/CSU, FDP and Bündnis 90/Die Grünen (black-yellow-green)

38 Coalition CDU/CSU and Bündnis 90/Die Grünen (black-green)

39 Coalition CDU/CSU und AfD

40 Coalition CDU/CSU, AfD und FDP

99 Other coalitions

S22 Assessment of electoral chances – static

0 No static of the electoral chance

1 Bad/worse than

S31 Possible coalition constellations

- 1 Black-yellow coalition (CDU/CSU and FDP)
- 2 Grand coalition (CDU/CSU and SPD)
- 3 Red-green coalition (SPD and Bündnis 90/Die Grünen)
- 4 Red-yellow coalition/Social liberal coalition (SPD and FDP)
- 5 Red-red-green coalition (SPD, Bündnis 90/Die Grünen and Die Linke)
- 6 Red-yellow-green coalition (SPD, FDP and Bündnis 90/Die Grünen)
- 7 Black-yellow-green coalition (CDU/CSU, FDP and Bündnis 90/Die Grünen)
- 8 Black-green coalition (CDU/CSU and Bündnis 90/Die Grünen)
- 9 Coalition CDU/CSU und AfD
- 10 Coalition CDU/CSU, AfD und FDP
- 99 Other coalitions

S32 Coalition statement

- 1 Unconditional rejection
- 2 Conditional rejection/no complete rejection
- 3 Conditional approval/no complete approval
- 4 Unconditional approval

6 Elucidations of the codes

Hereafter the code plan is examined in-depth and, if necessary, the variables groups, variables and codes used in the news analysis are elucidated while elaborating practical working instructions for the coders.

1. Newscast analysis

Group 1

Formal data

ID_sdg ID of the newscast

The ID consists of eight characters: 1. number of the newscast V01, 2. examination year V03, 3. examination month V04, 4. examination day V05.

V01 Title of the newscast/numeric

ARD/Das Erste

11 Tagesschau

ZDF

21 heute

RTL

31 RTL aktuell

Sat.1

41 Sat.1 Nachrichten

V02 Title of the newscast/alphanumeric

V03 Year

13 2013

V04 Month

06 June

07 July

08 August

09 September

V05 Day

01

...

31

[V06 Beginning of the newscast]

V06m Minute

V06s Second

Principles

The beginning of a newscasts is defined by the start of the opening credits. If an advertising spot or clock appears in the opening credits, the newscast begins when the clock disappears, i.e. when the advertisement ends. Four broadcasting companies use the following advertising clock:

ARD: advertising spot in a blue frame with great digital clock below,

ZDF: analogue clock appearing in the corner while the advertising spot is broadcasted,

RTL: split screen advertising spot, while inserting "Gleich RTL aktuell" below,

Sat.1: split screen advertising spot, while head lines are faded in below (crawler).

[V06 End of the newscast]

V06m Minute

V06s Second

Principles

The end of the newscast is defined by the end of the closing credits. Weather reports with own opening credit or sponsor acknowledgement are not part of the newscast.

V08 Duration of the newscast in seconds

2. Analysis of news stories

ID_bei ID of the news story

The ID consists of ten characters:

1. number of the newscast V01, 2. examination year V03, 3. examination month V04, 4. examination day V05, 5. number of news story B01. Numbers 1 to 4 define the ID of the news story (ID_sdg).

B01 Current number of news story in the respective newscast

Principles

With each newscast the numeration of the news stories has to be started again.

(cf. paragraph 1.3 for the identification of recording units)

B02 1st filter variable news story analysis: Thematically classifiable news story?

1 Thematically classifiable news story (at least 3 sec.)

2 Thematically not classifiable news story (at least 15 sec.) ⇒ End

Principles

The **opening words and closing remarks** of a news story have to be seen as part of the story even if they contain additional information (even if they last more than 15 sec. but refer exclusively to the following/previous news story).

In doubt, moderations have to be seen as opening words rather than closing remarks.

Indicators for opening words (= no new recording unit, hereafter referred to as "RU"): introductory information, background information.

Opening words of blocs of short news items/newsflashes belong to the first news story of the bloc if they do not last more than 15 seconds.

In newscasts presented by several moderators in the studio the opening words often have a function of transition, i.e. they refer on the previous as well as on the following news story (e.g. if one thematic news bloc is followed by another thematically different as sports and weather). **If in doubt, it has to be seen as opening rather than as closing remarks.** If a new person appears on the scene, this constitutes a new RU.

Opening credits/welcoming words/overview of the news to come/closing credits/teaser "see in a moment" (RTL) are considered as B02=2 if they last longer than 15 seconds. If they are shorter, they are attributed to the previous resp. following news story. Only the overview of the news in addition has to be examined with regard to the announced topics (in conjunction with the coding of the respective news story -> B07).

The moderation does not determine the topic of the news story.

The spoken content is more decisive than the pictures, i.e. a new RU begins only when the moderator talks about a new topic even if there could be seen earlier any pictures referring to the new topic.

Switching on to an intern stock market expert/journalists is to be classified under a single news story even if several topics are treated.

[B03 Beginning of the news story]

B03m Minute

B03s Seconds

Principles

Beginning of the news story has to be put down. Please note that the beginning of the first news story must be identical with the beginning of the newscast.

[B04	End of the news story]
B04m	Minute
B04s	Second
B05	Duration of the news story in seconds

Filter variables politics

B06	2nd filter variable news story analysis: does the news story refer to German politics or German political actors (Codes 1000-1400)?
1	Yes: German politics is main topic/German political actor in main role ⇒ Continue (with in-depth analysis)
2	Yes: German politics is secondary topic/German political actors in secondary role ⇒ Continue (with in-depth analysis)
9	No: no politics/no German political actor ⇒ End

Definition

This variable indicates whether a news story refers to German federal politics as main or secondary topic. The term **German federal politics** means any kind of **politics on the federal level** (normally as actions of one or several federal political actors, cf. list 2 codes 1000-1400; abstract description without concrete reference to an actor are however possible) in connection with the administration of (social, economic, political etc.) circumstances in the Federal Republic of Germany (domestic policy, e.g. national security, health policy, labour market policy, family policy etc.) or in connection with the relations of Germany with one or several other countries or international organisations (foreign affairs, e.g. visits of federal politicians abroad, summit conferences, international treaties, out-of-area missions of the German Army etc.).

German federal politics do not include the national politics of other countries (except of foreign affairs referring to Germany), the relations between other countries without reference to Germany as well as political actions of international organizations without reference to Germany while the reference to Germany can be based on the thematization of German federal political actors.

If in a news story about international politics a German politician is mentioned or thematized only marginally, the news story is coded with the variable for federal politics as secondary topic (B6=2). Only if the focus of the news story lies on German federal politics, it is coded as a main topic (B6=1).

News stories referring to politics on subnational level (state or local politics) are coded with the variables of German federal politics if there is an explicit federal reference. Exception: news stories about results and/or consequences (particularly government formation) of state elections in Bavaria on 15 September 2013 are considered to have per se a reference to federal politics and therefore to be coded always by the respective variables. This is also applicable for news stories about dissolutions of government or scandals in states or communities as well as the resignation of minister-presidents which per definition belong to German federal politics.

News stories about simple state or local politics without obvious reference to German federal politics do not belong to German federal politics in the sense of this study. This is also true for reporting about the campaign in the run up to the state elections in Bavaria (15 September 2013) and Hesse (22 September 2013); they are not considered to be federal politics.

News stories that are not strictly speaking political are also integrated into the sample if a German federal political actor appears (codes 1000-1400 on list 2: *key player actors*) so that their relevance with

regard to the criterion of inclusion does not result from their topic but from their actors. (Example: a news story about the Bayreuth Festival is basically unpolitical; but the preselection reveals that Angela Merkel attends this festival so that the news story is included into the sample even if it refers strictly speaking not to politics.)

Moreover, the following special rules prevail in order to determine the inclusion of a news story into the sample:

Actions of the German Armed Forces are considered to be federal politics.

Actions of public administration bodies, service facility of the Federal Government, of the Federal Prosecutor, of the Federal Labour Office, of the Office for the Protection of the Constitution etc. are not per se considered to be federal politics. They are not included into the sample, only if a reference to German federal politics (including German federal political actors) could be justified by other elements of the respective news story

The presence of terrorists (even in the past), including trials and investigations against terrorists, are not included into the in-depth analysis. They can be included only if a reference to German federal politics can be justified by other parts of the respective news story. Actions of terrorists with a reference to Germany are political actions.

(International) Statistics with regard to "Germany" as a whole (e.g. the OECD education report) are not per se considered to be federal politics. They are not included into the in-depth analysis, only if a reference to German federal politics (including German federal political actors) could be justified by other elements of the respective news story

Demonstrations about political issues and decisions are political actions and included into the in-depth analysis.

Rules

In order to identify the main resp. secondary topic of a news story, the latter has to be seen in its entirety.

The focus of a news story determines the main topic which depends on the relative length that is dedicated to this topic.

Secondary topics can appear in two ways: (1) as subaspect of the main topic or (2) as replenishment which is thematically independent from the main topic.

In order to be coded as a federal political secondary topic (code 2), the topic has to be (at least briefly) discussed in terms of content. If topics are only mentioned/ enumerated they are to be ignored.

If German federal political actors appear (cf. *list 2: Actors, Codes 1000-1400*) in an article which does not deal with politics in narrower sense, it has to be identified whether these actors play a main role or a secondary role in it.

B07 Announcement of the news story

Was the news story announced in the opening credits (even in the crawler)?

0 News story was not announced

This code also applies to news stories which have been announced during the newscasts and not in the opening credits (i.e. "After the short news you'll see...").

1 News story was announced

Principles

If a newscast contains several news stories about an announced topic (e.g. film and interview), all of them will be coded as announced.

Please note that it is possible that the announcements to be coded can appear before the defined beginning of the newscast, i.e. during the advertising clock.

However, only announcements which appear immediately before the defined beginning of the newscast are registered. Earlier announcements, e.g. during the previous program, are not registered.

B08 Journalistic form of presentation

1 News presented by an anchorman

The news is read out or recited freely by the anchorman, often within news blocs. Normally, only the anchorman is to be seen (eventually with still pictures or graphics as background or frame).

Does not contain film or moving pictures.

2 News story within a film ("NIF")

An event is presented within a film while the text is read out by the anchorman (or another speaker) and not by a correspondent/reporter. This happens very often within news blocs. It is possible that at first only the speaker is to be seen and then the film appears while the speaker continues talking.

Contains always film shots resp. moving pictures.

Apart from pictures it can also contain quotes even as insertion.

Indicators: short duration, often sequence of several stories read out by the same speaker without displaying the author.

Pictures often come from news agencies and are attributed with own text so that the films are not self-produced.

Please note that in the Tagesschau NIFs also can appear outside of news blocs.

If a supposed NIF appears after other forms of presentation, it has to be examined thoroughly whether it has to be seen as part of the previous news story. Indicators or the constitution of a new RU: change of speaker, laterally inserted message, no transition to another actor made by the journalist of the news story or the speaker.

3 News story as a film

Normally it is introduced by the anchorman and consists of a (self-produced) story of a reporter which can contain quotes and interviews. The reporter can often be seen.

Indicators: mostly longer duration as NIFs, the author is named explicitly.

4 On location/stand-ups/reporter on site

A correspondent/reporter of the broadcasting company reports on location in a live transmission, even by telephone or as VTR.

Mostly the moderator prepares the live transmission by an introductory question, the correspondent/reporter answers and the moderator thanks him. The introductory words have to be seen as part of the live transmission.

The reporter can also hold an interview on site.

Can also include moving pictures while the correspondent continues speaking.

Please note that you must not code interviews between news speakers and reporters or experts or politicians in this category. These are to be registered as interviews (Code 5).

Exception: experts from survey institutes who cooperate regularly with the broadcasting company are to be considered as intern journalists, i.e. interviews with them can be coded as live transmission.

5 Interview/Talk

In this category it is not relevant whether the interview is held in studio, by telephone or in a live transmission. This category includes interviews with news speakers and reporters. An interview consists of at least two questions (if there is only an introductory question and afterwards an uninterrupted stand-up, cf. Code 4).

Can also contain clips while the interview goes on

6 Commentary

Must be specified explicitly as such.

7 Independent moderation

Moderation with informative character that does not introduce a news story. Can contain clips while the text is read out live by the speaker.

Under this category conversations between several moderators have to be coded while conversations with "experts" have to be coded as interviews (Code 5) even if they appear regularly in the newscast.

9 Other

e.g. public polls and vox pops

B09 Main subject of the news story: alphanumeric

Principles

Take down a headline which should explain the coding and be comprehensible even after a year and which helps the coders of the in-depth analysis to identify the respective news story.

The format of the registration is standardized: "State or site: Actor plus topic resp. event".

For events in Germany it is sufficient to note only the site, the region or the State; it is not necessary to note the detail "Germany" ("D"), only if the exact site is not mentioned or it refers to several regions.

For events outside of Germany only the country is registered unless the exact site is important for the reported event (e.g. "F: Parliament adopts tax increases"; "USA: Flood in New Orleans").

If the country is not clear or not mentioned, a question mark ("?",) is to be registered.

Group 2

Thematization analysis (2): Politics, polity and policy issues

This analysis is based on the following three-fold dimensional framework. All topics thematized in news stories have to be assigned to one of these dimensions.

Politics: The political process which evolves as succession of actions of political actors.

Examples: votes in the Federal Parliament, election campaigns of the parties, negotiations between ministries, coalition negotiations and decisions of parties, forming of opinions and preferences of voters.

Polity: The structural dimension, concerning the overall institutional order of the political system as well as its institutions.

Examples: institutions of the governmental system and their elements (e.g. the federal parliament Bundestag with committees, parliamentary party groups, MPs; the federal system of Germany with States and their governments as well as the Bundesrat).

Policy: The content dimension, i.e. measures and programs developed, decided upon and implemented by political actors.

Examples: different fields of politics as e.g. financial policy, economic policy, social policy and defense policy, but also single measures as e.g. financial or other support of determined companies.

Political issues are coded regardless of their temporal reference, i.e. thematic references to politics before the Grand Coalition have to be coded.

General principles for the coding of variables B12/politics, B14/polity and B16/policy

The coder must code an issue as specifically as possible. First he has to classify it under one of the thematics of the political dimensions (e.g. election campaign). If an issue can be assigned even more differentiated within these thematic blocs (e.g. election campaign strategies in general), the coder has to choose the respective code. If the issue can even be assigned to the next level of this code (e.g. campaign for secondary (party-list) votes in particular), the issue has to be coded respectively. This is the principle that the coder has to follow: he must work his way through the several levels of the codes in order to code the given issue as exactly as possible: i.e. special topic prevails over particular topic prevails over general topic. Although the thematic focus of the news story must not be neglected. If an issue cannot be classified under a more concrete level, the coder must verify if he can assign it to a category of the respective superordinate level.

Example I: A news story handles with the planned price increases in public passenger transport. In this case it has to be coded as 3514 “Special topic price increases”. If the news story, however, treated only the “Deutsche Bahn” in general, it has to be coded as 3513 “Public passenger transport in particular”. If a news story treating the transport policy in general cannot be assigned to the subordinate categories “road transport in particular” (3511) or “public passenger transport in particular” (3513), it would correspondingly have been coded as 3510 “transport policy in general”. If a coder can only identify the topic infrastructure policy in a news story without further specification that would allow a classification under category 3510 “transport policy in general”, 3520 “energy policy in general”, 3530 “Housing market in general”, 3540 “postal and telecommunications in general” or 3550 “internet in general”, the news story has to be coded with 3500 standing for the abstract field of infrastructure policy.

Example II: A news story dedicated to the accession of Turkey to the EU is coded with 3112 “Special topic accession of Turkey to the EU”. If the story treats however the German contribution payments to the EU, it has to be coded as 3111 “European Union/EU in particular” because the single topic “contributions” does not have a specific code in the code plan; it is only encodable on a superordinate level because it only can be unambiguously assigned to the topic EU.

B10 Main subject of the news story: politics, polity, policy issue?

In this phase of analysis it has to be identified to which field the main subject of German federal politics of this news story belongs; even if German federal politics is only a secondary topic (B06=2), the main subject of this secondary topic of the news story has to be identified.

Accordingly, the coder has to attribute the code 1 (main aspect) to one of the three following variables B11, B13 or B15. To the other two variables he can only attribute code 0 (no reference) or 2 (secondary aspect).

If, in an article that does not deal with politics in a narrower sense, German federal political actors appear in a main or secondary role while the reporting is unpolitical, code 0 has principally to be used.

0 No politics , polity or policy issue or event ⇒ Continue with B18a

1 Politics issue and event (cf. list 1: codes 1000)

2 Polity issue and event (cf. list 1: codes 2000)

3 Policy issue and event (cf. list 1: codes 3000/4000)

B11 Reference to politics issues?

0 No ⇒ Continue with B13

1 Main aspect ⇒ Continue with B12

2 Secondary aspect ⇒ Continue with B12

Principles

If B10=1 is coded, necessarily B11=1. With regard to the other two dimensions the coder only has to verify if they also appear as secondary aspect. Therefore it is important by which dimension (politics or polity or policy) the existing political reference of the news story is primarily achieved and not whether politics/polity/policy is the main aspect of the news story.

Only one main aspect within the three political dimensions is possible!

Politics issues are only taken into account as federal political secondary topic (code 2), if they are (at least briefly) discussed in terms of content. If topics are only mentioned/enumerated they are to be ignored.

B12 If yes: politics issue

1000-1700 Politics issue according to list 1

Principles

Rather a **concrete code** than a superordinate code has to be attributed whenever possible.

Sequential coding: the order in mentioning the topics is crucial for the coding, i.e. the topic mentioned in the first place is to be registered and classified under a code as concrete as possible and not under a comprehensive, superordinate code which is only to be attributed if a more concrete code cannot be determined.

B13 Reference to polity issues?

0 No ⇒ Continue with B15

1 Main aspect ⇒ Continue with B14

2 Secondary aspect ⇒ Continue with B14

Principles

If B10=2 is coded, necessarily B13=1. With regard to the other two dimensions the coder only has to verify if they also appear as secondary aspect. Therefore it is important by which dimension (politics or polity or policy) the existing political reference of the news

story is primarily achieved and not whether politics/polity/policy is the main aspect of the news story.

Only one main aspect within the three political dimensions is possible!

Polity issues are only taken into account as federal political secondary topic. If they are (at least briefly) discussed in terms of content. If topics are only mentioned/enumerated they are to be ignored.

B14 If yes: polity issue

2000-2500 Polity issue according to list 1

Principles

Rather a **concrete code** than a superordinate code has to be attributed whenever possible.

Sequential coding: the order in mentioning the topics is crucial for the coding, i.e. the topic mentioned in the first place is to be registered and classified under a code as concrete as possible and not under a comprehensive, superordinate code which is only to be attributed if a more concrete code cannot be determined.

B15 Reference to policy issues?

- | | | |
|---|------------------|----------------------|
| 0 | No | ⇒ Continue with B17a |
| 1 | Main aspect | ⇒ Continue with B16 |
| 2 | Secondary aspect | ⇒ Continue with B16 |

Principles

If B10=3 is coded, necessarily B15=1. With regard to the other two dimensions the coder only has to verify if they also appear as secondary aspect. Therefore it is important by which dimension (politics or polity or policy) the existing political reference of the news story is primarily achieved and not whether politics/polity/policy is the main aspect of the news story.

Only one main aspect within the three political dimensions is possible!

Policy issues are only taken into account as a federal political secondary topic (code 2), if they are (at least briefly) discussed in terms of content. If topics are only mentioned/enumerated they are to be ignored.

B16 If yes: policy issue

3000-4500 Policy issue according to list 1

Principles

Rather a concrete code than a superordinate code has to be attributed whenever possible.

Sequential coding: The order in mentioning the topics is crucial for the coding, i.e. the topic mentioned in the first place is to be registered and classified under a code as concrete as possible and not under a comprehensive, superordinate code which is only to be attributed if a more concrete code cannot be determined.

If the sequentially first named topic refers to a not concrete superordinate code, the specification of this topic is made by using the more concrete topic mentioned in the second place (subordinated code). However, this is only possible if all the other topics of the political dimension (for ex. all topics of politics) appearing in the news story can be coded by this more concrete code. If several different subordinate codes of the respective superordinate code are addressed, the superordinate code must be retained.

Example: the sequentially first named topic is 1200 "election campaign" (superordinated code) and the topic mentioned in the second place is a more concrete topic with a 12xx/13xx coding (for ex. "TV debate of top candidates", 1241), the news story is to be coded by 1241 instead of 1200, if all other

topics of politics in this news story also refer to the TV debate. If apart from the TV debate another code is mentioned in the third place, e.g.. "Election programmes/government programmes of parties" (1210), the code 1200 must be used because the TV debate cannot be retained as specification as the news story refers to more than one code of election campaign.

This procedure is not only to be respected when defining the topic of politics but also when determining the policy issue or the policy issue.

Thematization analysis (2): policy positions

The coder has to concentrate on whether specific political positions are found in the news stories regardless their importance.

Principles

Every mention is coded no matter how small it is, regardless of order or of the news story's focus.

2a: Thematization of positions in the debate about welfare-state services

The positions coded in the context of the debate about welfare-state services range from cutting back the services to extending them.

B17a Welfare-state services

Basically, two groups of welfare-state services are classified and coded under this category:

1.) Welfare-state services on an insurance basis

These include all welfare-state services granted to the beneficiaries because of their contributions. This group contains statutory old age pension, pensions for civil servants, statutory casualty pensions, benefits of statutory health insurance, care and nursing services, unemployment benefits.

2.) Welfare-state services on an assistance basis

These include all welfare-state services granted to the beneficiaries because of their poverty. This group contains unemployment benefits II (synonymous: ALG II, Hartz IV, basic benefit for job-seeking persons), social benefits (synonymous: basic social benefits for permanently disabled persons), housing subsidy, social housing, education advancement grants (BAföG), education allowances (BAB, BAB for handicapped persons).

0 No reference to welfare-state services

1 Neither extension nor cut-back of welfare-state services is thematized.

2 Extension of welfare-state services is thematized:

Example: "Today the federal government has decided a pension increase of 3.3 percent for the year 2013.", "Gregor Gysi explains that the black-yellow coalition has to raise immediately the standard rate of Hartz IV in the face of drastic raise of living costs."

3 Cut-back of welfare-state services is thematized:

e.g. "Von der Leyen's plans to pay principally only 80% of unemployment benefits II to unemployed persons up to 25 years in order to ease the burden for the treasury", "Politicians of the SPD said that the FDP plans in the long-term to shift the financing of university studies completely to scholarships and credits so that the BaföG will be abolished."

4 Extension as well as cut-back of welfare-state services are thematized.

Principles

Attention: Welfare-state services must not be confused with social policy. The coder has to follow exclusively the definitions of welfare-state services mentioned above and not to take the codes for social policy in the code list into account.

Even the mere mentioning of terms like "public services" / "welfare-state services" / "cut-backs in the social system" is coded by B17a.

If the development of a social branch (in the sense of a labour market section) (cf. e.g.. the Plan for Germany) is mentioned in the text, code B17a does not apply.

If the Hartz reforms in general but not explicitly Hartz IV is mentioned, code B17a does not apply.

Extension of welfare-state services is to be used if the citizens or specific population groups benefit of the respective measure.

The "pension guarantee" is to be considered as an extension of welfare-state services and coded respectively.

An increase of social expenditure is not necessarily equated to an extension of welfare-service because it can also result from an increase of the beneficiaries. It has to be explicitly noticeable that the beneficiaries receive more money in order to use the code "extension of welfare-state services".

If the introduction of a new, not yet existing welfare service on an insurance or assistance basis is mentioned, the code 1 "Neither extension nor cut-back of welfare-state services is thematized." is used because principally only existing services can be increased/reduced.

(2b) Themmatization of positions in the debate about taxes and duties

The different positions in the context of the debate about taxes and duties are coded here and range from an increase of taxes and duties to a reduction of taxes and duties..

B17b Fiscal policy

If any fiscal policy is thematized resp. not thematized, this has to be coded with the variables below.

- 0 No reference to fiscal policy
- 1 Neither increase nor reduction of taxes and/or duties is thematized
- 2 Increase of taxes and/or duties is thematized
- 3 Reduction of taxes and/or duties is thematized
- 4 Increase as well as reduction of taxes and/or duties are thematized

Principles

The simple mention of the term "taxes" is to be registered as fiscal policy in the sense of B17b.

Custom duties are taxes in terms of the German general fiscal code.

"Tax gifts" are coded by 3 "Reduction of taxes and/or duties".

The increase as well as the reduction of existing tax-free amounts has to be coded as increase/reduction of taxes.

If the reduction of the solidarity contribution is mentioned, this is to be considered as tax reduction and coded respectively

If the introduction of a new, not yet existing tax is mentioned, the code 1 "Neither increase nor reduction of taxes and/or duties" is used because principally only existing taxes can be increased/reduced.

Thematization analysis (3): reference points of the news story

B18a Does the news story refer to the Federal election 2013?

(Including the federal election campaign, cf. list 1: codes 1200-1460)

0 No

1 Yes

Principles

The reference to the election can be achieved by words and/or images.

Keywords are for example candidate, party program or federal election.

Every still so small/casual mention is coded as reference.

B18b Explicit reference to the TV debate

0 No

1 Yes

Principles

Every reference to the German TV debates 2002, 2005, 2009 and 2013 is to be registered, no matter how small it is.

B18b only refers to the TV debate of the top candidates.

B18c Explicit reference to survey results of the Federal election 2013

0 No

1 Yes

Principles

Every mention of results of a German survey in the run-up to the federal election 2013 is to be registered, no matter how small it is. (This does not only apply to concrete figures but even to so called "trends".)

By this point only opinion surveys are understood.

B18d Central event as cause of reporting

0 None of the events from list 3

01-43 Event from list 3

Principles

An event from list 3 is considered as cause of reporting if it is the point of departure for the news story. (Therefore, not every small mention is to be coded.)

An event can be coded as a central event as cause of reporting even if the reporting date does not correspond to the beginning of the event sequence mentioned in list 3, as the data in list 3 should only serve as a general orientation guide for the coders.

In identifying the cause of reporting, the coder has to answer the questions what has happened and why the broadcasting company has reported about it.

The aim of measurement, here, consists in analyzing if a certain event dominates the reporting of the day.

Not to be coded are eventual pegs/connecting passages in the introducing remarks ("The weeks after the party congress ...").

Thematization analysis (4): German political actors

The appearance of political actors in different roles – institutional and other roles – is coded in this category.

Political actors include all politicians of all parties on all levels (from federal and state to local level).

By **‘institutional role’** we understand the **role within the governmental system** (e.g. mayor, Federal Minister, Federal President, member of the parliamentary party group, member of the State Parliament, Member of the Federal Parliament, Minister President, President of the Bundesrat, municipal councilor etc.). By **‘governmental system’** we understand the political institutions at large and all political actors of the political system of Germany. We thus record constitutionally defined roles and those actors currently embodying these roles as **‘institutional roles’**.

By **‘other role’** we understand **all roles beyond the governmental system** which are not legally defined, e.g. candidate, roles defined in statutes (of parties) such as executive board/presiding committee, party leader, youth association, etc.

In order to identify the role to be coded, the coders have to look at the explicit role attributions (e.g. Chancellor Angela Merkel). If there is no explicit role attribution the coder has to take the setting of the role into account (e.g. “Yesterday Angela Merkel said in the Chancellor's office” = Angela Merkel as Chancellor; if in reports from the Federal Parliament a specific party is mentioned, the parliamentary party group of the respective party is to be coded).

If no explicit role can be identified with an actor, the variable for “other roles” must be registered.

The identification of the respective role can be achieved by words and/or images (also by the insert or lower third).

Only actual roles have to be registered

- B19a** Angela Merkel: chancellor
- B19b** Angela Merkel: other roles
- B19c** Other politicians or boards of the CDU: institutional (roles)
- B19d** Other politicians or boards of the CDU, CDU in general: other (roles)
- B19e** Other politicians or boards of the CSU: institutional (roles)
- B19f** Other politicians or boards of the CSU, CSU in general: other (roles)
- B19g** CDU/CSU (Union parties resp.) in general
i.e. institutional and other roles

B19h	Rainer Brüderle: leader of parliamentary party group
B19i	Rainer Brüderle: other roles
B19j	Other politicians or boards of the FDP: institutional (roles)
B19k	Other politicians or boards of the FDP, FDP in general: other (roles)
B19l	Federal Government in general <i>Includes: synonyms as “black-yellow coalition/ CDU/CSU and FDP coalition”, “Cabinet”</i> <i>In news stories referring to foreign policy, “Berlin” and “Germany” are always considered to be synonymous with the government.</i> <i>Includes: government spokesperson</i>
B19m	Peer Steinbrück: member of the German Federal Parliament
B19n	Peer Steinbrück: other roles
B19o	Other politicians or boards of the SPD: institutional (roles)
B19p	Other politicians or boards of the SPD, SPD in general: other (roles)
B19q	Jürgen Trittin: leader of parliamentary party group
B19r	Jürgen Trittin: other roles
B19s	Other politicians or boards of Bündnis 90/Die Grünen: institutional (roles)
B19t	Other politicians or boards of Bündnis 90/Die Grünen, Bündnis 90/Die Grünen in general: other (roles)
B19u	Gregor Gysi: leader of parliamentary party group
B19v	Gregor Gysi: other roles
B19w	Other politicians or boards of Die Linke: institutional roles
B19x	Other politicians or boards of Die Linke, Die Linke in general: other (roles)

For the variables B21a-z the following codes are applicable:

0	Does not occur
11	Appears in the first place and in sound bite
12	Appears in the first place and is quoted/thematized
21	Appears in the second/third etc. place and in sound bite
22	Appears in the second/third etc. place and is quoted/thematized

Principles and examples

When identifying the order of the mentioning all political actors are taken into account (list of actors: 1000-1800 as well as codes 3000-4000), so that a first-mentioned actor must not necessarily be registered. If there is a first-mentioned political actor who cannot be registered by the variables B19 (for example Federal President, State Minister without mentioning the party, Federal Constitutional Court, Opposition), this could lead to the registration from the second person up.

Political actors who are thematized in both roles within one news story are to be registered in their institutional as well as in their other role. Example: if Angela Merkel is introduced as election campaigner (B19b), but is subtitled with “Chancellor” during her campaign speech, this is coded by B19b as well as B19a.

If an actor appears within one news story in sound bite and quoted/thematized, this will be coded with the variable for unmediated speech, i.e. code 11 prevails over code 12, code 21 prevails over code 22. Example: if Guido Westerwelle, Minister of Foreign Affairs, is first mentioned in the introducing remarks of the newscaster (Code 12) and appears in sound bite in the respective news story after other actors (code 21), the

variables for first-mentioning and unmediated speech will be combined so that variable 11 is coded, i.e. even between the different groups codes are to be seen hierarchically. This applies even if there are different persons subsumed under the same code. Example: if SPD MP A is thematized as first person (code 12), SPD MP B appears afterwards in sound bite (code 21), this leads to a coding of B19o = 11.

Furthermore mentioning of party specific colours is to be coded, i.e. mentioning of black-yellow must be registered by CDU/CSU and FDP.

Prospective black-yellow coalitions are coded as CDU, CSU and FDP as long as there is no reference to the current governing black-yellow coalition. If a coalition explicitly composed of Union parties (CDU/CSU in general) and FDP is mentioned, the Union parties (CDU/CSU in general) are coded as an actor. If it is supposed that the black-yellow coalition will be continued the variable B19l "Federal Government" must be registered.

Other coalition models are coded by the respective participating party. If a prospective coalition (e.g. "black-green") is mentioned, CDU and CSU are coded as independent actors (other roles). This equally applies to past coalitions. For coalitions the codes 11/12 are attributed for both/several parties if they are named in connection (e.g.. "black-green" = 12 CDU; 12 CSU, 12 FDP).

Attention with the term "black-yellow coalition": if it is to be considered as synonymous with Federal Government, it is coded only by B19l and not for CDU, CSU and FDP. If a black-yellow coalition in a state is thematized, the corresponding parties in accordance to the respective state are coded, but not by B19l.

Generally the coalition models must be unambiguously identifiable, otherwise they are not registered. A "left-left alliance" or the "left political camp" for example are not unambiguously assigned and are therefore not coded.

B19l Federal Government means only Government, black-yellow coalition, cabinet, "the" coalition, government spokesmen and p.r.n. Germany/Berlin. **Government circles** and **government camp** are coded by B19l as well.

In foreign political news stories "Berlin" and "Germany" are to be considered as synonymous with the Federal Government and therefore coded by B19l, if it is not only meant as geographic indication, but stands for actors in a foreign political context.

"The" **governing parties**, "the" coalition parties as well as "the" coalition partners are coded by Union parties (CDU/CSU in general) and FDP. This includes the government side in reports from the German Bundestag.

The "**state**" as such is not to be equated with the Federal Government and is therefore never coded as such.

The **Chancellor's Office** will not be coded as Federal Government or Federal Chancellor Merkel.

Ministries and their spokespersons are not coded as Federal Government.

Federal Ministers as well as **Minister Presidents** of the States are registered with the respective party (institutional), even if the party is not mentioned explicitly. If the coder is not sure to which party the political actor belongs, it could be helpful to look into *list 2: Actors*.

If **cross-party institutional roles are assigned with an explicitly party specific attribute**, this is to be registered. Example: if the "chancellor of CDU" is mentioned, it is coded as follows: B19a: Merkel as chancellor and B19b Merkel other roles, because she appears always as chancellor and as party political actor. The CDU is therefore to be seen as an attribute of Merkel (Merkel in a second role) and is not to be coded additionally as a party. It is the same case for "Minister of FDP XY", which is coded as B19j other politicians FDP institutional and B19k FDP others in general, since he appears on the one hand as Minister (institutional) and on the other hand as actor of the party.

The FDP is therefore not to be seen as party as detailed before with the CDU. That means that with composite actors it is important to code the two different roles of an actor (others + institutional) and not party and actor. (But this is not the case if for example the FDP government is mentioned.)

A **part of a party** (e.g. the FDP part of the black-yellow coalition) is coded as party in other roles.

If the **party is added after mentioning of politicians by name**, for ex. Federal Chancellor Merkel (CDU), the parties are not coded as actors because in this context they are considered to be attributes of politicians.

If the **chancellor candidates are mentioned without their explicit name** in a news story codes B19b: Angela Merkel other roles and B19n: Peer Steinbrück other roles are used.

A “**People’s party**” can be coded as the respective party if the context makes clear which party is meant. If the “**people’s parties**” are mentioned, CDU and SPD are coded. (When defining the order of the three first named actors in the context of the coder rating they are, however, not taken into account as described below.)

Roles that are **meant metaphorically** and are attributed by journalists (or other actors), e.g. ordinary seaman (in the sense of lightweight) or shadow boxer are not taken into account when defining the order of the mentioning.

Sole **mentions by name** of actors are considered as other roles and are coded respectively. Mentions like “she” and “he” are not coded as other actors.

Partisans and voters of a certain party are not registered within the parties.

Former federal chancellors are coded as belonging to the respective party (other roles) provided that they are still member of this party.

Deceased actors are not registered, when they had been dead during the survey period.

The German Armed Forces are not registered in this category.

Established paraphrases of the German parties, e.g. social democrats/social democracy (SPD) or free democrats (FDP) are registered as the corresponding parties.

Coder-Rating: overall tendency of the news story

By overall tendency of the news story we understand the impression – positive or negative – of certain parties, politicians or coalition constellations in federal political reference system if they appear as one of the first three actors of the list of variables B20a-B20o below in a news story.

This impression can be the consequence of **explicit evaluations** of the actor as such made by journalists or other quoted sources, of **explicit judgments of one or several of his acts** as success or failure, or of **rejection or support of the actor as such or one or several of his acts** (e.g. political individual decisions and their results, acts of communications, political style, policies, survey results).

The overall tendency is to be coded for the **first three actors** of the list below appearing in a news story. An exception can only be made with the Union parties: if the Union is mentioned, besides for the two actors CDU and CSU an overall tendency for two other actors is to be coded, i.e. the thematization of the Union parties leads to the exceptional coding of four actors instead of three. If in the news story less than three actors of the list below are thematized, the overall tendency is only coded for $n < 3$.

For the coding a five-point-scale is used⁴: from “unambiguously positive” (=1) to “unambiguously negative” (=5). A news story is to be coded for an actor as “unambiguously positive” (=1) resp. “unambiguously negative” (=5), if it contains **exclusively positive resp. negative evaluations** on this actor and/or his actions (this does not imply that the news story deals exclusively or mainly with this actor). Neutral contents can also be included, but none pointing in the opposite direction. If a news story contains **positive as well as negative evaluations**, it has to be coded “rather positive” (=2) resp. “rather negative” (=4) depending on the direction in which the tendency of the news story goes. If **positive and negative evaluations are evenly balanced**, i.e. are represented in more or less equal parts, the news story is to be coded “ambivalent/positive as well as negative” (=3). If a **tendency is not clearly** visible, the news story is to be coded “neutral/no tendency” (=9).

In assessing the news story equal weight is attributed to all evaluations on actors regardless of the actor's category, i.e. e.g. journalistic evaluations are equally important as evaluations expressed by other politicians; even self-evaluations are integrated into the rating.

Each actor is to be coded exclusively for themselves. His **overall tendency has no impact on other actors** (e.g. a negative evaluation of Peer Steinbrück does not imply that the news story is automatically positive for Angela Merkel).

⁴ If the overall reliability of this scale turns out to be bad, this is a priori no problem. When testing the reliability of these variables, two reliabilities are always to be calculated: (a) the reliability of the overall scale (b) the reliability of a three-point-scale in which the attributes “unambiguously positive” and “rather positive” on the one hand and the attributes “unambiguously negative” and “rather negative” on the other hand are summarized. The distinct differentiation between positive/ambivalent/negative is more important than the one between “unambiguously” and “rather” positive resp. negative.

B20a	Angela Merkel
B20b	CDU
B20c	CSU
B20d	Peer Steinbrück
B20e	SPD
B20f	Rainer Brüderle
B20g	FDP
B20h	Jürgen Trittin
B20i	Bündnis 90/Die Grünen
B20j	Gregor Gysi
B20k	Die Linke
B20l	Coalition CDU/CSU and FDP, federal government
B20m	Grand coalition (CDU/CSU and SPD)
B20n	Coalition SPD and Bündnis 90/Die Grünen

For the variables B22a-o the following codes are applicable:

0	Actor is not thematized (as one of the first three actors)
1	Unambiguously positive
2	Rather positive
3	Ambivalent/positive as well as negative
4	Rather negative
5	Unambiguously negative
9	Neutral/no tendency

Principles of registration

Basically, the rating objects are only coded if they appear in a **federal political context**, i.e. politicians and parties on a state/communal/local level are not coded in this category (with the exception below).

However, it is important to note that **chancellor candidates** are always to be considered as federal political actors and an overall tendency is always to be registered for those actors if they appear as one of the first three actors in a news story. They are to be coded regardless of their role, i.e. e.g. even if Angela Merkel is named as chancellor, the overall tendency is to be coded for her.

If **parties** are thematized as one of the first three actors in connection with results of State elections of Bavaria on the 15 September 2013 and their consequences (particularly processes of formation of government) as well as with scandals in the state or local policy or with dissolutions of government, they are coded exceptionally in a subnational context (state or local policy). If they appear in a context of pure state policy without visible connection with federal policy, they are never coded.

Moreover, an overall tendency can only be coded for parties if they are **thematized explicitly** as a whole. It is not enough that actors of the respective parties are thematized in the news story. The appearance of the general secretary Andrea Nahles, for example, cannot be equated with an occurrence of the SPD, but the SPD must be thematized in a news story in order to retain the occurrence of the SPD and to code eventually an overall tendency. The tendency to be registered should only refer to the part of the news story in which the party is thematized in its entirety. The tendency for a SPD actor appearing in the same news story should not influence the tendency for the SPD.

In order to code the overall tendency of a **coalition**, it is not sufficient that actors of the parties forming this coalition or the parties themselves are represented in a news story by words or images. The respective coalition must be thematized as a whole.

Coalitions should exclusively be coded in a federal political context.

With red-green-coalition only a coalition of SPD and Bündnis90/Die Grünen is to be coded, but not a coalition of SPD, Bündnis90/Die Grünen and Die Linke.

Coalition constellations other than B20l (black-yellow), B20m (Grand coalition) and B20n (red-green) are not taken into account when defining the order of actors for B20a-n, so that also a red-red-green coalition will not be registered as SPD, Die Linke and Bündnis 90/Die Grünen for the coder rating. Such a coalition is neglected when registering the three first named actors.

The **federal government** (B20l) is only registered if it is named explicitly as government. Single ministers are not registered in this category. **Government's spokespersons** (contents) are taken into account when registering the evaluations for the federal government.

If **CDU/CSU** resp. the Union parties are named as one of the first three actors, B20b as well as B20c are coded. This naming is to be considered as a single actor, i.e. two others can be registered.

If the **"people's parties"** are mentioned, CDU and SPD are not taken into account when defining the order of the three first named actors because it is not clear which party is mentioned in the first place.

"The" governing parties, "the" coalition parties as well as "the" coalition partners are registered as Union parties (CDU/CSU in general) and FDP. The same procedure applies for the "government side" in reports from the German Bundestag. In this case the Union parties (CDU/CSU in general) are registered first.

If a sound bite is the concretion/repetition/illustration of a speech act of a quoting anchorman/journalist, which was spoken directly before the sound bite, only the sound bite is included in the rating but not the additional journalistic speech act.

Principles of tendency

In order to identify the overall tendency of a news story, three sorts of indicators have to be taken into account:

(1) Evaluations:

This includes explicit judgments of journalists or sources quoted in the news story (e.g. other political actors) about the actor or one or several of his actions.

Example for a positive explicit judgment: *Peer Steinbrück⁵ is portrayed as a pleasant politician in a news story about his appearance in the Hall Meeting. Gregor Gysi is characterized as humorous in a news story about the general debate in the German Bundestag.* Example for a negative explicit judgment: *Angela Merkel was supposed to have no interest in fighting the unemployment. In a news story the Union parties are described as estranged.*

(2) Support/rejection:

This includes explicit rejection or support of an actor or one or several of his actions.

Example for support (positive): *In a news story positive reactions of CDU partisans on a campaign appearance of Angela Merkel are witnessed. A news story reports that the CDU/CSU and the FDP enjoy the greatest support of voters. News stories are about Angela Merkel extending her lead in the chancellor's candidature and enjoying a high*

⁵ The direction of the tendency refers to the underlined actor respectively.

ranking in election surveys. A news story comments that the initiative of the SPD to introduce a minimum wage meets widespread approval in the population.

Examples for rejection (negative): *It is reported that the trade unions do not agree with the fiscal political suggestions of the FDP in its election manifesto. A news story suggests that a coalition between SPD and the Greens would actually not obtain the majority of the population.*

Campaign contributions are not coded as support.

(3) Success/failure:

This includes explicit statements of journalists or sources quoted in the news story about one or several actions of the actor considered as success or failure.

A simple acceptance resp. rejection of an application in the Federal Parliament does not represent success resp. failure and is therefore not registered in this category. This is also valid for the acceptance of party manifestos.

Example for success (positive): *It is reported that Angela Merkel succeeded in convincing the French of the German position in the context of the European summit. It is reported that the black-yellow coalition has completed an enormous work load by adopting legislative packages and reforms.*

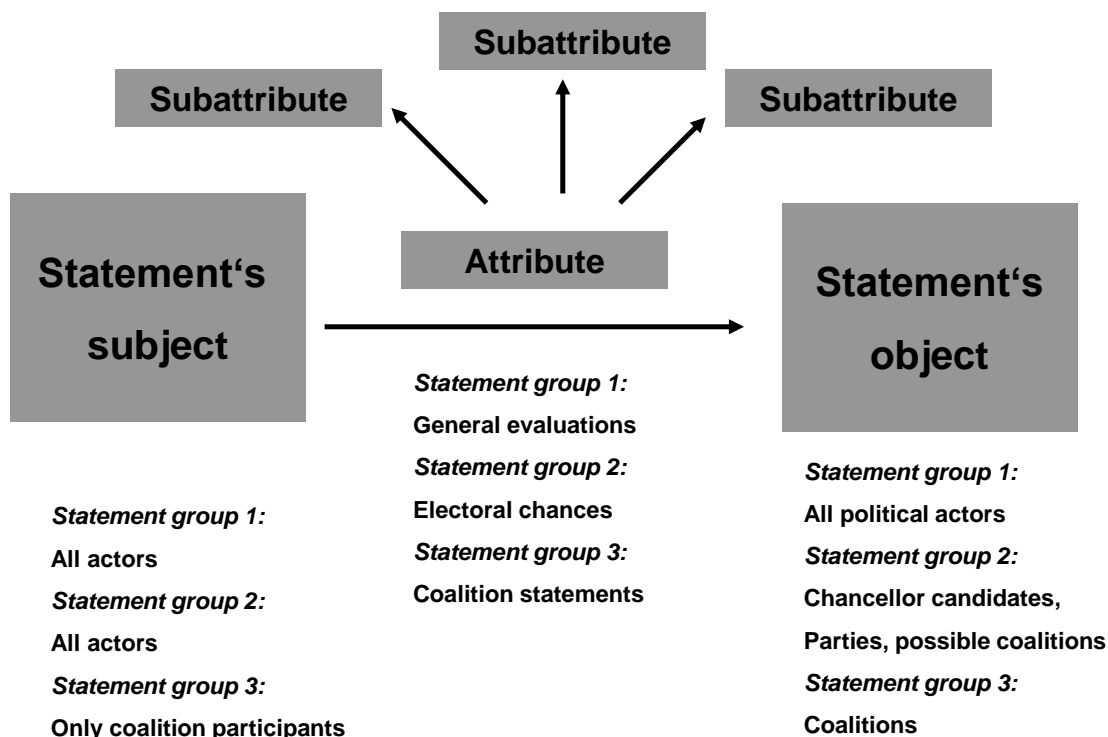

Example for failure (negative): *A news story claims that the family policy of the CDU could not stop the dropping of the birth rate or even encouraged it.*

3. Statement analysis

Group 3

General structure:

Generally a statement is defined as the allocation of an attribute to the statement's object by an action in the role of the statement's subject. The attribute can be completed by the allocation of subattributes.

In section 3 of the elucidations of the codes you find further information about how to choose the news stories to be analyzed and to define the three statement groups of the statement analysis.

General principles on the identification and coding of the statements

Each statement is registered one-dimensional, i.e. each in this context relevant remark leads to the constitution of a new recording unit.

If one of the variables characterizing the three statement groups changes, a new case is constituted.

If a statement's subject summarizes two or more identifiable objects in one statement, for each object of evaluation a separate statement must be recorded.

Example: "Both parties considered their candidates to be the winner of the TV debate" – this remark leads to a positive evaluation of Merkel and Steinbrück by the respective party.

"General indications of objects" as for example "all parties" are registered with superordinate code (parties = 3000).

If a speech act of a quoting news speaker/journalist to be registered is repeated/illustrated/concretized as a quote, we only register the sound bite of the quoted actor; even if the quote of the CDU is expressed by e.g. the leader of the parliamentary party group Volker Kauder, i.e. an institution is represented by a concrete politician, only the concrete speaker is registered.

When identifying the statement's subject and the object of evaluation, the principle of explication is applied. If Angela Merkel is introduced in a news story as election campaigner, she is registered as top candidate (3210) until she is characterized explicitly with her institutional role (chancellor 1101).

When identifying the roles to be coded, the explicit role attributions must firstly be taken into account (e.g. Chancellor Angela Merkel). If in the news story no role is explicitly allocated, the setting is to be used alternatively in order to identify the role to be coded (e.g. "Yesterday Angela Merkel told in the chancellor's office" = Angela Merkel as chancellor). The explication can be made by words and/or images.

Example: "The Federal Minister of Economics and party chairman Philipp Rösler bashed Merkel's assertiveness in the CDU", is registered in one RU. As statement's subject the first mentioned function – Federal Minister of Economics (1105) – is coded.

Principles for all three statement groups/overlapping between the groups

Conditional formulations, speculations and other vague statements are not registered in any of these groups.

Formulations in subjunctive II are to be handled with care. Statements with "would, could, should", etc. have to be examined thoroughly; e.g. "Merkel's 'keep it up' could finally gamble away the CDU's edge in the surveys" will not be registered as electoral chance.

It could happen that certain statements are registered several times: e.g. "A government of CDU/CSU and FDP stands for a better fiscal policy" can be registered as coalition signal (if the statement comes from the CDU/CSU or the FDP) and as evaluation of the fiscal political competence of both parties.

Positive or negative electoral chances are only to be registered as electoral chances (statement group 2), and not one more time as evaluations (statement group 1).

Formal data

ID_aus ID of the statement

The ID consists of twelve characters:

1. number of newscast V01, 2. year of recording V03, 3. month of recording V04, 4. day of recording V05, 5. number of news story B01, 6. number of statement S01.

S01 Current number of statement per news story

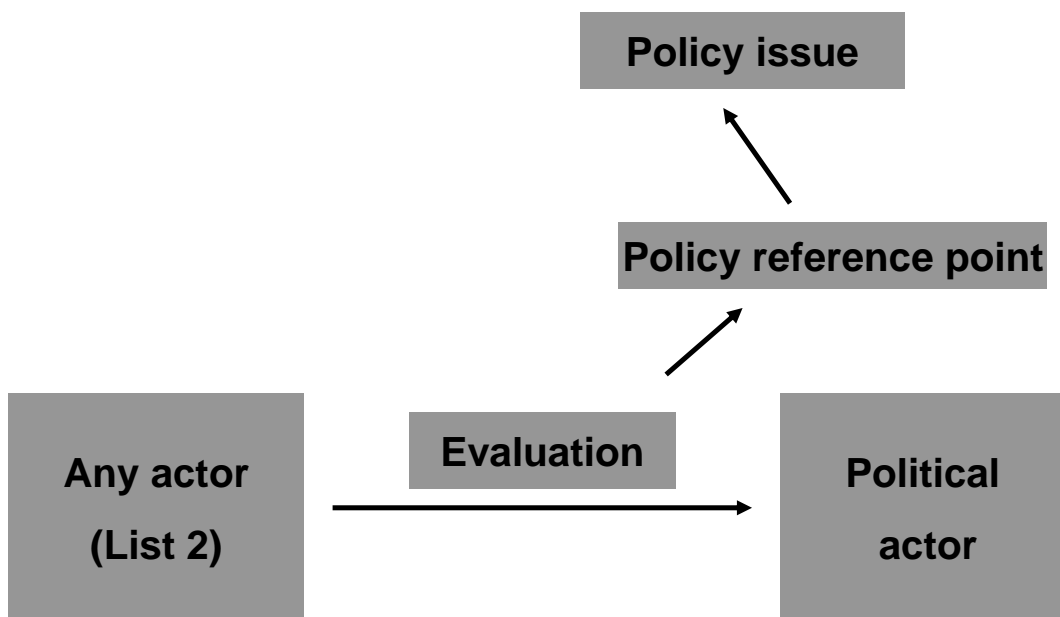

S02 Central filter statement analysis: statement group

1	Statement group 1: evaluations of German political actors	⇒ Continue with S10
2	Statement group 2: statements about electoral chances	⇒ Continue with S20
3	Statement group 3: coalition statements	⇒ Continue with S30

Statement group 1: evaluations of German political actors

Structure

Statement group 1 is based on the following structure: Any actor (statement's subject) allocates a positive or negative evaluation (statement's attribute) to a political actor (statement's object). In connection with the statement's attribute another subattribute is to be registered: the policy reference point of this evaluation. If the evaluation refers to a specific policy competence, the policy issue of the reference must be registered as second subattribute. If the evaluation refers to the general policy competence of the political actor or another point of reference, the subattribute policy issue is not to be coded.

Definition

Evaluations of political actors are such statements in which political actors are assessed positively or negatively.

Only explicit evaluations are registered so that irony and rhetorical questions are not registered.

Principles and examples

Evaluations of political actors are not limited to the context of the federal election 2013.

Evaluations of the results at the state or local elections are not registered in this category.

The formulation must always be taken into account: "Higher burdens for the citizens caused by the fiscal policy of the CDU" is not considered to be an evaluation, "fiscal policy of the CDU leads to social clear-cutting" is an evaluation.

"Criticized" and similar unambiguous statements are seen as evaluations.

Attenuated formulations or observations as "[...], the fear of a party colleague", "could mean that", "Althaus comes out of his shell", "difficult", "appropriate" or "proper" are not registered.

Moreover, if a formulation cannot be considered doubtlessly positive or negative (example: "plain"), it is not registered.

To be “responsible” or “jointly responsible” does not imply criticism as such. A further explicit evaluation is needed to be coded as a statement.

Statements about the popularity of politicians are considered to be an evaluation and are therefore registered.

Descriptions of prior events are not to be registered as evaluations: “Walther Leisler Kiep (who resigned as a consequence of the donation affair) was the first one who plunged the CDU into crisis”.

“SPD regards itself as winner of the weekend in spite of the poor performances (at the state election)” and “FDP is satisfied with itself” (in reference to the results of the state elections) are considered to be evaluations of election results and are therefore not registered.

However statements such as “The Left has scored with issues and persons” resp. “with the issues minimum wage, education, reform of the health care system” are registered as they are positive evaluations of the election campaign. In the latter case four recording units are constituted. (persons: S13 = 9, minimum wage: S13 = 2, S14 = 38, education: S13 = 2, S14 = 41, reform of the health care system: S13= 2, S14 = 37.). When multiple issues are listed like this (e.g.in the context of a political balance of transactions) the different policy areas which these issues can be assigned to, are identified and only recorded once. The sequence of the enumeration can be neglected in this case.

If an actor “defends” his actions/political proposals, this is registered as a positive evaluation.

“Skills” of political actors are registered as positive evaluation.

Outrage about actors and their actions as well as recourse claims are registered as negative evaluation.

The labelling “debt chancellor” is a pejorative rating.

Threats against political actors are registered as negative evaluations without policy-reference.

If the point of reference cannot be identified exactly, no statement is coded, e.g. like the formulation “he is so muscle-bound he can hardly move”.

Comparative evaluations are registered two-dimensional, i.e. as two different cases.

Election posters need to be thematized and verbalized explicitly in order to be coded as statements.

Graphics, which are not coded as part of statement group 2, are only registered as statements if their interpretation is explicitly verbalized.

Statements about the competences of the chancellor candidates Merkel and Steinbrück regarding their problem solving strategies in certain policy fields are registered as evaluations of their respective specific policy competence. They are not additionally coded as electoral chances.

S10 Statement’s subject

1000-7800 Subject according to list 2

Principles

When coding such actors who appear several times in the list, the explicit nomination is generally registered. If in one statement several roles/functions are mentioned, the first role prevails. If Angela Merkel for example is thematized in one statement as Chancellor and top candidate, she is to be registered as Chancellor.

The Federal Constitutional Court is coded as statement's subject when “Karlsruhe” is synonymously named as originator of the statement.

S11 Object of evaluation

nnnn cf. list 2: codes 1000-1800 and 3000-4000

Principles

If two actors are compared on the basis of a reference point, two statements are registered so that the respective comparison object would not get lost.

If a reference object in a self-referential statement can be identified out of the statement, e.g. Steinbrück: "We can do better", the object is matched accordingly. The "We" in our case would refer to code 3400 for the SPD.

If it is said that Germany is well prepared to face the swine flu, we code the Federal Government as object of evaluation. Other actors (e.g. the health ministry) are only coded when named explicitly.

If it is not clear if an accused (former) politician is member of a party yet, he is coded with "other party member" since a negative impact on the party can be assumed if the politician had an explicit function in former times.

There is no summarizing code for "politicians". The statement "I think nothing of politicians" is therefore not coded.

Evaluations on the German Armed Forces are not registered since the army does not appear as an actor in the respective list.

S12 Tendency of evaluation

- 1 Negative
- 2 Positive

Principles

Substantial criticism about the content of political proposals, drafts, etc. is considered to be an evaluation. Negating evaluations (e.g. "not bad") are not seen as evaluations.

In case of court decisions, a verdict of not guilty is coded as positive, a condemnation as negative evaluation. So e.g. the statement "Court of Auditors discharges Schmidt and states use according to regulations" is coded as positive evaluation, even in self-referential form: "Now it is clear that I have not contravened applicable legislation".

Investigations against a political actor are not coded as evaluations.

S13 Policy reference point

- 1 General policy competence
- 2 Specific policy competence
- 9 No policy reference point of the evaluation

In this category evaluations of politics as a whole are registered, e.g. "politics of Angela Merkel is successful"

⇒ **Continue with S14**

Principles and examples

Substantial criticism on the content of political plans/electoral programs, e.g. by emphasizing the negative impact/consequences, is considered to be a negative evaluation of the respective policy competence (S14), if the object of evaluation can be identified without room for interpretation.

Substantial criticism that refers to negative impacts on "justice questions in general" is registered as a specific policy competence with regard to social policy (S14=37).

If the statement's subject and object for the evaluation "cold-hearted policy" are clearly identifiable, the statement is coded as general policy competence (Code 1), if no specific policy competence can be identified directly.

The category "no policy reference point of the evaluation" (Code 9) comprises all explicitly identifiable reference points beyond the domain of policy competences (e.g. communication performances).

The formulation "system Merkel has run out of steam" is coded with S13 = 1, in the sense of "generally no longer able to govern".

The terms right, honest, correct, honorable and fair are covered by S13 = 9.

“Market radicalism of CDU and FDP” and similar formulations are considered to be general policy competence since they refer to the political style as a whole and not only the economic policy.

If the political style of an actor is evaluated as a whole, S13=1 has to be coded.

If an actor is characterized as “politically damaged”, a negative evaluation of his policy competence in general is coded.

S14	If specific policy competence: policy issue?
31	Foreign affairs
33	Defense
34	Internal security
35	Infrastructure

Statement group 2: statements about electoral chances in Germany

Structure

Statement group 2 is based on the following structure: Any actor (statement's subject) attributes an electoral chance (statement's attribute) to chancellor candidates, parties or possible coalitions (statement's object). With reference to this statement's attribute, two other subattributes are registered: the nature of the named electoral chance and the derivation of the electoral chance by means of survey results.

Definition

In this category, statements are coded in which the support of parties, coalition constellations and chancellor candidates by the citizens resp. voters at the **federal election 2013** are characterized, e.g. in the form of statements about the electoral chances resp. opportunities of winning. As surveys are only one possible source of such statements, there could also be other representations of public opinion (e.g. vox pops or statements of politicians) so that the naming of this statement group by the term “electoral chances” is caused by reasons of simplification. Furthermore all statements about the numerical strength of parties and coalition constellations as well as the popularity of chancellor candidates are coded in this category.

Principles and examples

Uncommented percentages without further context (e.g. survey results or election results) do not constitute statements about electoral chances to be registered. Attention: if the end of a development is interpreted, this leads to the constitution of eventually more than one statement about the electoral chances. If it is said that “in the preceding week the SPD wins two percentage points but continues to rank with 24% considerably behind the CDU”, this leads to the registration of e.g. three statements, a development and two status because the end of a dynamic experienced by the SPD is compared with the survey results of the CDU and therefore interpreted. According to the rule mentioned above, an uncommented end of a development (“the SPD wins two percentage points to amount to 24%”) is only to be registered as one electoral chance.

Statements about electoral chances are only registered if they are verbalized.

Comparisons as “Black-yellow finds more acceptance in the population than red-green” have to be registered as two different statements.

The evaluated chances to raise the survey results or to reach a concrete percentage etc. are registered. Example: “It is doubtful whether they could manage to raise this value.”

Political barometer: the simple enumeration of percentages (without increase/decrease/comparison with other parties) is not registered as electoral chance.

Conditional expressions like “if the undecided citizens go to the polls, it will be fine for us” are ignored.

Self-referential statements about electoral chances expressed by politicians as e.g. “We are going to win the election” are also coded in this category.

“The probability that Steinbrück will make it into the Chancellor's Office is rising” is coded S24 = 20 as a dynamic electoral chance (S23).

“This marks the beginning of the end of triumphal march of Steinbrück who already saw himself in the chancellor's office” is coded as statement about electoral chances and is considered to be the negation of self-referential “well-founded” victory claims as “We will win the election because...”.

“Because of yesterday's results at the state election too, we will win” is coded S24 = 12 as static electoral chance (S22). (The formulation “win” with reference to SPD and CDU/CSU is synonymous to “become strongest party”).

“Merkel has expanded her lead compared to Steinbrück” is divided into three different statements: (1) dynamic (S23), good for Merkel, (2) comparison: static (S22), good for Merkel and (3) static (S22) bad for Steinbrück.

“It might be a close thing for the SPD” is not coded because it is not unambiguously identifiable if the statement contains a positive or negative evaluation.

“Three quarter of the population don't believe in a change of government” is coded in the following manner: S21 = 31, (Black-yellow coalition), S22 = 3 (good) and S24 = 14 (Formation of a government by a two-party coalition).

“The SPD has only the chance to participate in a government when a grand coalition is formed” is registered under S24 = 16 (participation in the government). The electoral chance of the grand coalition is not registered one more time because the aim of this statement was to make clear that the probability to govern is little.

“The opposition could draw advantage from the case Wulff, but who is the opposition after the federal election?” is not coded as an electoral chance because it is pure speculation.

Numbers on potential voters are not coded as electoral chances.

Statements about electoral chances of parties at events aiming to increase political interest among the youth are not registered, since we only register electoral chances in the 2013 federal election.

S20 Statement's subject

1000-7800 Subject according to list 2

Principles

If the journalist/speaker reproduces survey results, the quoted polling institute must be registered as statement's subject. The respective institutes will only be registered if stated explicitly; it is not enough to know which institute belongs to which broadcasting company. If the institute's name is not stated explicitly, the superordinate code is used.

If a political actor quotes survey results to found his own statement, he is registered as statement's subject.

If a concrete institute, however, is mentioned at the beginning or the end of the news story and it is evident that all quoted results come from this survey, the respective

institute has to be coded as statement's subject for all concerned statements within this news story.

S21 Statement's object

Chancellor candidates

- 11 Angela Merkel
- 12 Peer Steinbrück

Parties

- 21 CDU/CSU
- 22 SPD
- 23 Bündnis 90/Die Grünen
- 24 FDP
- 25 Die Linke
- 26 AfD
- 29 Other parties

Coalitions

- 31 Coalition CDU/CSU and FDP (black-yellow)
- 32 Grand coalition (CDU/CSU and SPD)
- 33 Coalition SPD and Bündnis 90/Die Grünen (red-green)
- 34 Social liberal coalition (SPD and FDP, red-yellow)
- 35 Coalition SPD, Bündnis 90/Die Grünen and Die Linke (red-red-green)
- 36 Coalition SPD, FDP and Bündnis 90/Die Grünen (red-yellow-green)
- 37 Coalition CDU/CSU, FDP and Bündnis 90/Die Grünen (black-yellow-green)
- 38 Coalition CDU/CSU and Bündnis 90/Die Grünen (black-green)
- 39 Coalition CDU/CSU und AfD
- 40 Coalition CDU/CSU, AfD und FDP
- 99 Other coalitions

Principles

The coding of code 11 or 12 leads inevitably to a coding of 20 under S24.

S22 Assessment of electoral chances – static

In this category the assessment of an electoral chance in one given moment is coded.

- 0 No static of the electoral chance
- 1 Bad/worse than
- 2 Medium/just as well
- 3 Good/better than

Principles

S22 and S23 cannot appear simultaneously in a RU. If an assessment of electoral chances in static form appears in combination with an assessment of electoral chances in dynamic form, two different statements about the electoral chances are to be coded.

If opinion poll ratings of a party roll S22=2 has to be coded.

S23 Assessment of electoral chances – dynamic

In this category the assessment of an electoral chance developing from one moment to another is coded.

- 0 No dynamic of the electoral chance
- 1 Decreasing support/losses
- 2 Constant support
- 3 Rising support/gains

Principles

S23 is even coded when the earlier point of reference is not named explicitly, but the dynamic of the electoral chance can be perceived by formulations as “now only”, “has gained”, “divided into half”, “be on the way up” or “rallying”.

S24 Explication of the electoral chance

- 00 Does not apply

If the nature of the electoral chance is not put in concrete terms, there has to be coded “does not apply” (0). This code is to be used always when S23 ≠ 0 is put down. However, for a development concerning the popularity of the chancellor candidates S24 = 0 is coded.

- 11 Absolute majority of a party

An absolute majority means that one party has gained more than half of the parliamentary seats so that it is able to form a government on its own. This code is only used when the term “absolute majority” or “one-party government” is explicitly mentioned.

- 12 Strongest party

A party is the strongest party (synonymous strongest political force) if it has gained more votes in comparison with its competitors; it must not have absolute majority, a relative majority is enough.

“Bad poll results” for CDU/CSU and SPD are registered as a bad chance to end up being the strongest party. For all other parties S24=0 has to be coded.

- 13 Record election result

A record election result means the forecast of the best or worst election result of a party since its foundation resp. since the Federal Republic's founding resp. since the first federal election in 1949. A record election result is only the case if the point of reference in order to determine the record is an earlier election result at a federal election since 1949; a record in comparison with an earlier survey result is not enough. E.g. “The SPD will probably reach the worst election result in its history”, “The opinion researcher predicts the best election result for the Green party since its founding.”

- 14 Formation of a government by a two-party coalition

E.g. “Black-yellow has a solid majority at its disposal”, “Actually, neither a red-green nor a black-yellow coalition has a sufficient majority to govern”

- 15 Formation of a government only by a coalition consisting of three parties

(Red-red-green, red-yellow-green, black-yellow-green, CDU/CSU – AfD – FDP)

Please note that in this context CDU + CSU are not considered to be two different parties of a coalition so that a black-yellow coalition is no tripartite alliance. E.g. “Without Die Linke, red-green have no majority”

- 16 Participation in the government

Code 16 refers to the chance of single parties to participate in the next government while code 14 concerns the chances of coalitions to form together the next federal government.

The formulation “power option” means a “government (participation) option” and is coded in this category, e.g. “no own realistic power option”.

E.g. “For the Greens the chance to participate in the next government has never been so good because of the offers coming from both political camps “.

17 Third-placed party

E.g. “In the meantime opinion researchers consider Die Linke to be third strongest force in Germany.”

18 Two-digit election result

E.g. “Due to the votes of disappointed SPD partisans the Greens can expect a two-digit election result.”

19 Passing the 5% threshold

E.g. “The rising survey results of the leftists increase the probability that they will belong one more time to the Bundestag.”

The non-passing of the 5% threshold has to be registered with this code as well. E.g. “According to current opinion polls the FDP will not pass the electoral threshold and be represented in the German Bundestag.”

20 Popularity of chancellor candidates

In this category are coded statements whether the population supports the chancellor candidates (not parties). E.g. “Steinbrück's popularity ratings rose constantly during the last weeks”, “Merkel is ahead in the voters' favor”. This code must be used every time when S21 has been coded by 11 or 12.

99 Other specific electoral chance

In this category are registered among others the electoral chances not referring to the federal level, but concerning regional sub entities, e.g. the “strongest party in East Germany”.

Rule

Wrong journalistic attributions, e.g. “The grand coalition has an absolute majority”, are coded by the right codes.

S25 Reference to survey results

- 0 No
- 1 Yes

Statement group 3: coalition statements

Structure

Statement group 3 is based on the following structure: An actor participating in a possible coalition (statement's subject) attributes a coalition statement (statement's attribute) to a possible coalition (statement's object).

Definition

In this category the coalition models which the participating parties approve/wish for themselves after the federal election 2013 or which they reject are registered. This does not mean general evaluations of these coalitions which are object of the evaluation analysis.

Principles

Neutral statements about coalitions (e.g. "Democratic parties must be in principle capable of forming all kinds of coalitions") are not registered.

If a certain coalition is not excluded (e.g. "We do not exclude categorically a coalition with the CDU/CSU").

The formulation "its preferred coalition partner..." without quote is not considered to be a coalition statement if it does not refer to a concrete statement of a politician.

If decisions at party conventions regarding possible coalitions are quoted, the corresponding coalition statement has to be coded.

S30 Statement's subject

- | | |
|---|----------------------------------|
| 1 | (Actor of) CDU |
| 2 | (Actor of) CSU |
| 3 | (Actor of) SPD |
| 4 | (Actor of) Bündnis 90/Die Grünen |

- 5 (Actor of) FDP
- 6 (Actor of) Die Linke
- 7 (Actor of) AfD
- 9 (Actor of) Other parties

Rule

Only political actors of those parties participating in the respective coalition can be the statement's subject.

In case of journalistic quotes the possible political actor must be perceivable as the source of the coalition statement. Ambiguous journalistic attributions of supposed coalition preferences of political actors in form of speculations are not registered as coalition statement.

S31 Possible coalition constellations

- 1 Black-yellow coalition (CDU/CSU and FDP)
- 2 Grand coalition (CDU/CSU and SPD)
- 3 Red-green coalition (SPD and Bündnis 90/Die Grünen)
- 4 Red-yellow coalition/Social liberal coalition (SPD and FDP)
- 5 Red-red-green coalition (SPD, Bündnis 90/Die Grünen and Die Linke)
- 6 Red-yellow-green coalition (SPD, FDP and Bündnis 90/Die Grünen)
- 7 Black-yellow-green coalition (CDU/CSU, FDP and Bündnis 90/Die Grünen)
- 8 Black-green coalition (CDU/CSU and Bündnis 90/Die Grünen)
- 9 Coalition CDU/CSU und AfD
- 10 Coalition CDU/CSU, AfD und FDP
- 99 Other coalitions

S32 Coalition statement

- 1 Unconditional rejection

E.g. "For us, a coalition with Die Linke is precluded", "I will not help a grand coalition to come to power."

- 2 Conditional rejection/no complete rejection

E.g.. "The top candidate of Bündnis 90/Die Grünen Jürgen Trittin said that the Greens could govern in the future with CDU/CSU if they agreed on their plans to increase the taxes for people with large wages, their plans for equal legal rights for registered partnerships and the introduction of a dual citizenship." => For it is very unlikely that the CDU/CSU will fulfil all these requirements and the author of the statement probably knows it, code 2 is attributed.

Code 2 refers also to cases when an actor is asked explicitly if he could imagine a coalition with a certain partner and does not answer with "no" but avoids an answer by saying e.g. "Principally, I exclude nothing".

Code 2 applies to statements in which a coalition is not excluded completely but is characterized as an option which is not up to debate in the face of the real political conditions e.g. "Black-green is a question which is actually not under discussion if you look at the survey results."

- 3 Conditional approval/no complete approval

E.g. "Surely a coalition with the FDP would not be a love marriage, but we should not exclude categorically a coalition between SPD, FDP and the Greens", said Sigmar

Gabriel. As he expresses that the FDP is not the preferred partner of the SPD but that there are no insurmountable obstacles to cooperation, code 3 is attributed.

"To be open towards a coalition with XY" is coded as conditional approval.

4

Unconditional approval

E.g. "The leader of the FDP Philipp Rösler said that he want to govern with the CDU/CSU after the federal election even with a majority of only one vote."

Principles

A coding as "conditional rejection" or "conditional approval" therefore depends on whether the aspect of rejection or approval prevails. In order to decide whether it is "conditional rejection" or "conditional approval" the context of the statement must eventually be taken into account.

7 Lists

List 1: Issues⁶

1000 POLITICAL PROCESSES (POLITICS ISSUES)

1100 Field of political conflicts and scandals

1110 Political conflicts in general

Refers only to politics. Other conflicts, for example between industry and politics, are not registered in this category.

1111 Conflicts in the Federal Government in particular

1112 Inner party conflicts (incl. conflicts between CDU and CSU) in particular

1113 Conflicts between parties in particular

Includes: conflicts between “friendly” parties resp. potential coalition partners, e.g. between CDU and FDP

1130 Political scandals in general

1131 Scandals in state politics in particular

1132 Scandals in federal politics in particular

1133 Special topic Steinbrück’s middle finger

1134 Special topic Steinbrück’s blackmail

1135 Special topic plagiarism scandals

1136 Special topic resignation of minister-president Platzeck

1200 Field of federal election campaign

This is the superordinate code for unspecific campaign reporting. Includes general forecasts for the election results if there is no reference to surveys (cf. 1290)

Here are coded also campaign and pre-election promises if they are not mentioned within a specific context (e.g. election program)

1210 Election programs/government programs of parties in general

Election programs are only coded if they are called explicitly or clearly identifiable as such. The so-called “100 days plan” of the SPD is also registered in this category.

6 The coding scheme is based on Roller, Edeltraud (1991): Ein analytisches Schema zur Klassifikation von Politikinhaltungen (FS III 91-201). Berlin: Wissenschaftszentrum Berlin für Sozialforschung. It has been adjusted and up-dated to meet the special aims of this study.

- 1220 Election campaigns of parties in general
All reports about election campaigns are coded by 1220 to start with. Codes 1221-1224 are only applicable with explicit mention of the respective terms.
- 1221 Canvassing of parties in particular
- 1222 Campaign style of parties in particular
Thematization of the political culture, e.g. “negative Campaigning”, attack vs. evasion etc.
- 1223 Campaign organization in particular (e.g. war-rooms , agencies involved in campaigns, portraits of spin-doctors)
“Man of action portraits” are articles about spin-doctors/campaign managers.
- 1224 Campaign costs/expenses in particular
- 1225 Online campaigning of the parties (websites, blogs, support platforms, social networking sites etc.)
- 1230 Campaign events in general
*All reports about election campaign events are coded by 1230 to start with. Codes 1231-1235 are only applicable with explicit mention of the respective terms. (“mass rally”, “electoral party convention”, “final rally” etc.).
Includes the so-called “German festival” of the SPD.*
- 1231 Official kick-off dates for campaigns fixed by the parties in particular
- 1232 Large rallies of top candidates in particular
- 1233 Electoral/special party conferences in particular
- 1234 Final rallies of parties in particular
- 1235 Protests/flash mobs at campaign events in particular
- 1240 TV campaign in general
- 1241 TV debate of top candidates in particular
Incl. pre-/post-coverage
- 1242 Party leaders' TV debate (“elephant round”) in particular
- 1243 TV three-way fight of the opposition parties in particular

- 1250 Coalitions in general
- 1251 Coalition statement in particular
- Coalition statements must be uttered by party political actors in order to be coded in this category. In case of coalition speculations (e.g. by journalists) the superordinated code 1250 Coalitions is to be used.*
- 1252 Special topic cooperation between SPD and Die Linke/SPD, Grüne and Die Linke
- 1253 Special topic cooperation between CDU/CSU and AfD resp. CDU/CSU, FDP and AfD
- 1254 Meetings of parties with possible coalition partners in particular
- 1260 Associations and campaign in general
- 1261 Meetings of parties with alliance partners (trade unions, employers' associations) in particular
- 1262 Statements of associations (e.g. trade unions, employers' associations) in particular
- 1270 Goals of the parties in the election (as regards election results) in general
- 1280 Election campaign strategies in general
- 1281 Campaign for secondary (party-list) votes in particular
- 1290 Surveys in general
- 1300 Personnel proposals for ministerial posts in general
- "Government team" is understood in the sense of shadow cabinet and therefore coded under this category in general. This is particularly true of all reports about the team of Steinbrück.*
- 1400 Field of Federal election**
- Includes election results of previous federal elections and reports on the Wahl-O-Mat.*
- 1410 Voter turnout in general
- 1420 Suffrage in general
- 1421 Direct mandates in general
- 1430 Admission of parties to elections in general

1500 Field of state or local elections and campaign

1510 State elections and campaign in Bavaria in general

1520 State elections and campaign in Hesse in general

1530 Consequences of state and/or local election results on federal politics in general

1610 Last debate in the Bundestag/last government declaration in general

1700 Other specific topic with reference to political processes

Includes resolutions of the Bundestag / Bundesrat in general, i.e. not thematic, also acts of state

Parliamentary committees of inquiry are also coded in this category.

The Parliamentary Control Panel and the Petitions Committee are also registered in this category.

POLITY ISSUES (Political structure/system dimension)

2000 POLITICAL STRUCTURES (POLITY ISSUES)

2010 Bureaucracy, civil service in general

2020 Politicians' parliamentary allowance in general

2030 Lobbyism in general

2100 Field of form of government

2110 Democracy in general

2111 Discontent with bureaucracy in particular

2112 Greater say of citizens in particular

2113 Special topic direct democracy/plebiscites

2200 Field of formal institutions

Includes: Open Day of the Federal Government

2210 Say of the Bundestag/Bundesrat in policy-making of the EU in general

2300 Field of national principles of organisation

E.g. Rule of law/constitutional state

2310 Federalism in general

2400 Field of normative order

Unspecific comments on the political culture in Germany are coded in this category.

2410 Deterioration of values/moral standards in general

2420 Disenchantment with politics in general

2422 Criticism on parties as such in particular

2423 Criticism on politicians as such in particular

2424 Criticism on federal bodies as such in particular

2425 Criticism on political structures as such in particular (e.g. inertia)

2470 Criticism on society in general

2471 Lack of perspectives in particular

2472 Envy in particular

2473 Rapacity in particular

2474 Lack of social cohesion/solidarity in particular

2475 No equality of chances in particular

2480 National pride in general

2500 Other specific topic with reference to political structures

Includes: Nuclear Regulatory Commission

POLICY-ISSUES (Political contents/content dimension)

3000 POLITICAL CONTENTS (POLICY ISSUES)

3100 Field of foreign affairs

3110 Europe in general

Includes: European banking union

3111 European Union/EU (as organization) in particular

3112 Special topic accession of Turkey to the EU

3113 Special topic accession of Croatia to the EU

3120 International organizations in general

3121 NATO in particular

3122 United Nations in particular

3130 State visits in general

Not for state visits of German actors or in Germany if the relations of Germany to the respective countries are thematized (cf. codes 3170-3173).

3140 Summit conferences in general

3150 Bilateral and multilateral agreements in general

3160 International aid in general (does not include financial assistance granted to members of the eurozone)

3161 Development aid in particular

3170 Germany's role/position in the world in general

3171 Relations of Germany to other countries in particular

Here, relations of Germany to all countries except from the United States, Russia and in Europe, even in occasion of state visits (cf. code 3130)

3172 Special topic relations of Germany to the United States

Even in occasion of state visits (cf. code 3130)

3173 Special topic relations of Germany to European countries

Even in occasion of state visits (cf. code 3130)

- 3174 Special topic relations of Germany to Russia
Even in occasion of state visits (cf. code 3130)
- 3175 Globalization in particular
- 3176 Special topic global justice
- 3180 International conflicts/wars in general
Includes: Middle East conflict and the conflict between Iran and Israel,
- 3181 Terrorism as an international problem/terrorist attacks outside of Germany in particular
- 3182 Special topic nuclear conflict with Iran
- 3183 Special topic revolution in Egypt
- 3184 Special topic civil war in Syria
- 3190 Arms exports in general
- 3200 Treatment of human rights in general
- 3300 Field of defense**
- 3310 Armament, disarmament in general
- 3311 Drones of the German Armed Forces in general
- 3320 (World) peace in general
- 3330 German Armed Forces in general
- 3331 International missions/missions abroad in particular
- 3332 Special topic deployment of the German Armed Forces in Afghanistan
- 3400 Field of intern security/jurisdiction**
- 3410 Criminality/violence in general
- 3411 Criminality of immigrants in particular
- 3412 Terrorism in Germany/danger of terrorist attacks in Germany in particular
Includes: RAF (Red Army Faction)

- 3413 Islamism in particular
- 3414 Right-wing extremism in particular
- 3415 Special topic NSU (right-wing terrorist group National Socialist Underground)
- 3416 Left-wing extremism in particular
- 3417 Corruption in particular
- 3418 Special topic politicians' corruption
- 3419 Special topic industrial corruption
- 3420 Rampages in particular
- 3421 Child abuse in particular

3430 Justice in general
Here: several and elder sentences

3431 Jurisdiction in particular
Here: a concrete, actual sentence

3432 Special topic Gustl Mollath

3433 Civil rights in particular

3434 Data protection in particular

3435 Special topic government surveillance

3436 Special topic intelligence services scandal

3437 Gun laws in particular

3500 Field of infrastructure

3510 Transport policy in general

3511 Road traffic in particular

3512 Special topic motorway toll for cars

3513 Public passenger transport in particular

3514 Special topic price increases

3515 Special topic privatizations (e.g. German railway *Deutsche Bahn*)

3520 Energy policy in general

3521 Energy prices (for electricity/diesel/gas/oil/gasoline etc.) in particular

3522 Energy supply (e.g. dependency of Germany's energy supply from abroad) in particular

- 3523 Nuclear energy in particular
- 3524 Special topic phasing-out of nuclear energy
- 3525 Special topic energy transition
- 3526 Special topic final disposal
- 3527 Alternative/regenerative forms of energy (renewable) in particular
- 3528 Subsidies on carbon/open-cast mining in particular
- 3529 Fracking in particular
- 3530 E-cars in particular

- 3540 Housing market in general
- 3541 House building in particular
- 3542 Rental prices in particular

- 3550 Postal and telecommunications in general

- 3560 Internet in general
Includes: cybercrime
- 3561 Locking of web sites in particular

- 3570 City-country-difference/"rural areas" in general

- 3600 Field of environmental policy**

- 3610 Environmental protection in general
- 3611 Environmental damages/pollution in particular
- 3612 Eco-tax in particular

- 3620 Protection of the climate in general
- 3621 Climate change in particular

- 3630 Nature conservation in general
- 3631 Natural disasters in particular
- 3632 Special topic flood 2013

3640 Animal welfare in general

3700 Field of social policy

Here, also public benefits/benefits of the welfare state if they are only mentioned in general.

3710 Family policy in general

3711 Marriages/families/civil partnerships in particular

3712 Special topic adoptions by same-sex couples

3713 Children in particular

3714 Special topic child care

3715 Special topic childcare subsidy

3720 Distributive justice in general (includes: social justice)

3721 Poverty in particular

3722 Special topic poverty of children

3723 Special topic poverty of older people

3724 Special topic income gap

3725 Social security in particular

3730 Equal treatment in general

Includes: discrimination in general

3731 Women/equality in particular

3732 Disabled persons in particular

3740 Seniors in general

3741 Pension in particular

3742 Special topic pension level

3743 Special topic pension guarantee

3744 Special topic taxation of pensions

3745 Special topic extension of working life/pension

3746 Special topic pension for mothers

- 3750 Immigration in general
Includes: naturalisation test
- 3751 Integration in particular
- 3752 Limitation of immigration in particular
- 3753 Asylum in particular

- 3760 Health policy in general
- 3761 Nursing care (for older people) in particular
- 3762 Special topic long-term care insurance
- 3763 Reform of health care system in particular
- 3764 Costs' explosion in health care system in particular
- 3765 Special topic contributions to the health insurance companies
- 3766 Benefits of health insurance companies in particular
- 3767 Special topic differences in benefits from a statutory or a private health insurance ("two class medical system")
- 3768 Doctors' income in particular
- 3769 Epidemics in particular
- 3770 Diet in particular
- 3771 Organ transplant in particular

- 3780 Demographic change in general
- 3781 Intergenerational justice in particular

- 3800 Field of labor market policy**

- 3810 Unemployment, unemployment rate in general
- 3811 Youth unemployment in particular
- 3812 Special topic shortage of training places
- 3813 Special topic job training pact

- 3820 Federal Labor Office (as organization) in general

- 3830 Agenda 2010/Hartz IV (*labour market reforms*) in general

- 3840 Wage policy in general
- 3841 Wage level in particular
- 3842 Incidental wage costs in particular
- 3843 Short-time work in particular
- 3844 Reduction of wages in particular
- 3845 Minimum wage in particular

- 1211 CDU/CSU, AfD and FDP coalition (prospective)

1300 Bundestag in general

Basically, “parliamentary party group in general” means the parliamentary party group as a whole. Single members of the parliamentary party group are to be classified under “Executive committee of parliamentary group” if a function within the executive committee is explicated. If an official function in the executive committee of the parliamentary party group is not mentioned, it has to be coded with “parliamentary party group – other members of parliament resp. organizational units”. If a speaker is identified as part of “parliamentary party group” in the insert or lower third, he has to be coded with “member of parliamentary party group”. The parliamentary party group as a whole can only be cited or object of evaluation.

1310 Parliamentary party groups of the governing coalition in general (legislative coalition)

1320 CDU/CSU-parliamentary party group in general

1321 CDU/CSU-leader of parliamentary party group Volker Kauder

1322 CDU/CSU – executive committee of parliamentary party group in general

1323 CDU/CSU-parliamentary party group – other members of parliament resp. organizational units

1330 FDP-parliamentary party group in general

1331 FDP-leader of parliamentary party group Rainer Brüderle

1332 FDP – executive committee of parliamentary party group in general

1333 FDP-parliamentary party group – other members of parliament resp. organizational units

1340 Opposition parliamentary groups in general

1350 Bündnis 90/Die Grünen-Fraktion allgemein

1351 Bündnis 90/Die Grünen-leader of parliamentary party group Renate Künast

1352 Bündnis 90/Die Grünen-leader of parliamentary party group Jürgen Trittin

1353 Bündnis 90/Die Grünen – executive committee of parliamentary party group in general

1354 Bündnis 90/Die Grünen – other members of parliament resp. organizational units

1360 SPD-parliamentary party group in general

1361 SPD-leader of parliamentary party group Frank-Walter Steinmeier

1362 SPD – executive committee of parliamentary party group in general

1363 SPD-parliamentary party group – other members of parliament resp. organizational units

1370	Die Linke -parliamentary party group in general
1371	Die Linke-leader of parliamentary party group Gregor Gysi
