# 1 Introduction

This codebook offers a complete documentation of the second wave of data collected in the “Children of Immigrants Longitudinal Survey in Four European Countries” (CILS4EU). An overview of the different data sets is given in the table below. The data sets can be merged using the unique identifier variable `youthid`.

		England	Germany	Netherlands	Sweden
Part	Version				
Youth main	Full	w2_ym_en_v2.3.0.dta	w2_ym_ge_v2.3.0.dta	w2_ym_nl_v2.3.0.dta	w2_ym_sw_v2.3.0.dta
	Reduced	w2_ym_en_v2.3.0_rv.dta	w2_ym_ge_v2.3.0_rv.dta	w2_ym_nl_v2.3.0_rv.dta	w2_ym_sw_v2.3.0_rv.dta
Youth classmates	Full	w2_yc_en_v2.3.0.dta	w2_yc_ge_v2.3.0.dta	w2_yc_nl_v2.3.0.dta	w2_yc_sw_v2.3.0.dta
	Reduced	w2_yc_en_v2.3.0_rv.dta	w2_yc_ge_v2.3.0_rv.dta	w2_yc_nl_v2.3.0_rv.dta	w2_yc_sw_v2.3.0_rv.dta
Youth friends	Full	-	-	w2_yf_nl_v2.3.0.dta	-
	Reduced	-	-	w2_yf_nl_v2.3.0_rv.dta	-
Youth newcomer	Full	-	-	w2_yn_nl_v2.3.0.dta	-
	Reduced	-	-	w2_yn_nl_v2.3.0_rv.dta	-

The friends questionnaire and the newcomer questionnaire were only used in the Netherlands.

For each data set, a reduced version and a full version exist. A comparison between these two versions can be found in Appendix F.

The structure of the codebook is oriented to the data structure, including separate subsections for the different data sets.

Section 2 provides an overview of all variables: ordered by topic (section 2.1) and ordered according to how they appear in the data set (section 2.2). By clicking on the page number on the right-hand side in the digital version, information about this variable can be retrieved:

Negative values indicate different types of missing values:

Code	Label	Description
-99	Don't know	Only if this option was provided in the questionnaire
-88	No answer	No box ticked/no answer given
-77	Not applicable	Not answered due to filter question
-66	Question not asked	Not asked in a country/mode
-55	Other missing	Answers that could not be coded, fun answers
-44	Interrupted Interview	Only for telephone and online modes
-33	Not available in reduced version	Answers not available in the download version

Notes contain further specificities for the respective variables. In general, the following information can be found in the notes:

- Question was not asked in one or more countries.
- Question was not asked in one or more modes.
- Question was not asked due to filter question.
- Further variables closely related to the variable.
- Variable is not included in the reduced version of the data set.
- Multiple answers are possible.

In general, all variables reflect questions included in the questionnaires. However, several adaptations were necessary, which can pertain to the following procedures and which can be identified by a certain ending of the variable name:

1. Generated variables (variable name ending with G)

Example: The generational status variable `y2_generationG` was generated using information provided by the child about his or her country of birth and age upon arrival as well as information provided in the parental interview about the biological parents' countries of birth as well as the grandparents' countries of birth.

2. Country-specific variables (variable name ending with CS)

Example: Due to divergent educational systems in the four CILS4EU countries, categories for idealistic educational aspirations differ sharply between countries. Therefore, a country-specific variable `y2_edasp1CS` is included in the data set that contains a total of 20 categories for every answer possibility in the four countries.

3. Harmonized variables (variable name ending with H)

Example: Idealistic educational aspirations `y2_edasp1H` were harmonized for England, Germany, the Netherlands and Sweden. This means that educational degrees were made comparable in the respective harmonized variables by combining several categories. The harmonized variable distinguishes "no degree", "degree below upper secondary school", "degree from upper secondary school and "university". Original answers are still available in the country-specific variables (see above).

4. Reduced-version variables (variable name ending with RV)

Example: Complete information on the respondent's concrete country of birth `y2_cob` is not available in the reduced version of the data. Instead, we offer a reduced version of this variable `y2_cobRV`, which distinguishes whether the respondent was born in the survey country or not. This variable is also included in the full version of the data.

### 3 Tracking data set

The tracking data set provided for CILS4EU contains general sampling identifier information on school, class and student level as well as information on implicit and explicit stratification criteria used during the sampling process (stratum, school type and regional information).

Additionally and most importantly, the data set contains information about the participation status of every student attending one of the randomly selected classes in participating schools in wave 1, thus being part of the student gross sample. The participation status variables furthermore distinguish between different modes of participation as well as – where available - reasons for non-participation. Please be aware that this detailed information is available only for some countries, thus, refusal rates cannot be compared across countries.

### **8.3 Appendix F: Differences Between Full-Version and Reduced-Version**

Due to data security reasons, two different versions are available for each data set: (1) a version with complete information collected during the survey (full version) and (2) a version in which specific information was reduced and aggregated in order to prevent the identification of single respondents (reduced version).

The structure of the full version and the reduced version of the data set is identical. This means that in both versions the same variables are included, but the variables encompass different information depending on the version of the data set. Variables with reduced or aggregated information are marked with an “RV” at the end of the variable name.

In the following overview, the differences between the full version and the reduced version of the data are listed.
