## BBC China 2006

### Fieldwork Report Quantitative Survey in Ten Cities

#### 1 Research Objective

To survey a sample of the resident population of Beijing, Shanghai, Chengdu, Shenyang, Nanjing, Guangzhou, Tianjin, Chongqing, Xian, and Kunming (15+) on various issues of media consumption.

#### 2 Methodology

##### 2.1 Sample Population

According to the *2000 Population Census Data*, the resident population aged 15+ in the ten cities was ca. 51 million persons.

	Total population (urban)	Total sample population (urban, 15+)
<b>Beijing</b>	9,584,343	8,448,908
<b>Shanghai</b>	11,778,069	10,405,515
<b>Chengdu</b>	5,930,233	4,968,780
<b>Shenyang</b>	3,791,326	3,301,532
<b>Nanjing</b>	3,624,234	3,167,275
<b>Guangzhou</b>	6,181,002	5,330,833
<b>Tianjin</b>	7,499,181	6,413,349
<b>Chongqing</b>	3,824,317	3,337,233
<b>Xi'an</b>	3,413,956	2,961,482
<b>Kunming</b>	2,982,843	2,560,589
<b>Total</b>	<b>58,609,504</b>	<b>50,895,496</b>

## 2.2 Sample Size

N = 2,800 completed interviews, including

City	No. of interviews
Beijing	350
Shanghai	350
Chengdu	350
Shenyang	250
Nanjing	250
Guangzhou	250
Tianjin	250
Chongqing	250
Xi'an	250
Kunming	250
Total	2,800

## 2.3 Method of administering the survey instruments

Face-to-face interviews in respondents' homes.

## 3 Sampling Design

A multi-stage random probability routine was followed.

### *Step 1 - Districts*

In each city Districts were selected randomly from a complete list. The number of interviews to be conducted in each District was proportional to the population size.

City	No. of selected Districts
Beijing	8
Shanghai	10
Chengdu	5
Shenyang	5
Nanjing	6
Guangzhou	7
Tianjin	6
Chongqing	6
Xi'an	6
Kunming	4
Total	63

### *Step 2 – Sub-districts*

In each city Sub-districts were selected randomly from a complete list. The number of interviews to be conducted in each Sub-district was proportional to the population size.

<b>City</b>	<b>No. of selected Sub-Districts</b>
Beijing	32
Shanghai	28
Chengdu	32
Shenyang	21
Nanjing	23
Guangzhou	21
Tianjin	21
Chongqing	21
Xi'an	21
Kunming	21
Total	241

### *Step 3 – Residents' Committees*

Within each Sub-district, Residents' Committees (RC) were selected randomly from the complete list of the RC from the database of the State Statistical Bureau.

<b>City</b>	<b>No. of selected Residents' Committees</b>
Beijing	32
Shanghai	28
Chengdu	32
Shenyang	21
Nanjing	23
Guangzhou	21
Tianjin	21
Chongqing	21
Xi'an	21
Kunming	21
Total	241

### *Step 4 – Households*

Within each chosen Residents' Committee, households were selected by random route. The premises of the Residents' Committee or associated locations served as starting points.

### *Step 5 - Respondents*

The selection of respondents was carried out by *Kish* grid. A '3 call-backs' system was employed for unavailable respondents. Unavailable/unwilling respondents were

not replaced within the same household. Practically, this meant that the interviewer called back up to three times in order to interview the selected respondent. If the respondent was still not available, a new household was selected.

Average number of interviews conducted in each sampling point was ca. 12.

**Average Number of Interviews per Sampling Point**

City	Average No. of Interviews/RC
Beijing	11
Shanghai	13
Chengdu	11
Shenyang	12
Nanjing	11
Guangzhou	12
Tianjin	12
Chongqing	12
Xi'an	12
Kunming	12
Total	12

#### **4 Fieldworkers and Training**

In total 23 supervisors and 117 interviewers were employed for this project.

City	No. of Supervisors	No. of Interviewers
Beijing	2	10
Shanghai	5	15
Chengdu	2	10
Shenyang	2	10
Nanjing	2	10
Guangzhou	2	15
Tianjin	2	10
Chongqing	2	16
Xi'an	2	9
Kunming	2	12
Total	23	117

Supervisors from all ten cities and QC staff were trained in Shanghai by Oxford Research International's Senior Manager. This ensured homogeneous training and a methodological approach by all fieldworkers. Local supervisors held a central training in their cities for all interviewers. The training of the interviewers included household and respondent selection, procedure for call-backs, recording unsuccessful attempts, general interviewing techniques, a detailed explanation of the questionnaire, and mock-interviews.

## 5 Quality Control

### Call-backs

74% of the interviews were back-checked: by supervisors being present at the interview (ca. 14%), by visiting the respondent after the interview took place (ca. 17%), or via phone (ca. 43%).

### Data Entry and Consistency Checks

A double entry procedure was used to reduce potential errors in data entry. Thorough consistency checks were run on the final data file to guarantee that inconsistent or illogical answers were minimised.

## 6 Weighting

A weighting factor was calculated and included in the final data file. It was calculated on the basis of an interlocking age/gender/city matrix compiled from 2000 Population Census data.

**Beijing (2000 Population Census)**

<b>Age Groups</b>	<b>Men</b>		<b>Women</b>		<b>Total</b>
