1 Overview

This codebook refers to the dataset ZA5989_Cognit_16 and is part of the project PIAAC-L. PIAAC-L was funded by the Federal Ministry of Education and Research (Bundesministerium für Bildung und Forschung, BMBF; project reference number: 01 JP 1301 A, B, C). The codebook lists all variables contained in the dataset. For all variables with value labels, frequencies of these value labels are displayed. No frequencies are displayed for unlabeled numerical variables (e.g., number of correct responses) or alphanumeric variables.

In PIAAC-L 2016, three tests of cognitive competencies were conducted (animal naming test, multiple-choice vocabulary intelligence test, symbol-digit test). These tests are also included in the SOEP. Users can find more information about the theoretical background of the tests and related literature in the Scales Manual provided by the SOEP team (Richter et al., 2017: 7-10).

Please note that respondents without valid data in at least one of the three tests were excluded from the dataset ZA5989_Cognit_16. Therefore, the dataset ZA5989_Cognit_16 contains 63 fewer cases compared to the dataset ZA5989_Persons_16. For respondents without valid data for one to two tests, the respective test items were set to the missing code -7 “Implausible value or not determinable”. The variables flag_validdata_16 and flag_reason_16 from the dataset ZA5989_Persons_16 provide information for which tests of cognitive competencies respondents (do not) have valid data and why no valid data are available.

Users should also be aware that the depiction of the items used in the multiple-choice vocabulary test and the symbol-digit-test is not allowed in the documentation. Therefore, the value labels of the variables f025item1ex and f025item2 to f025item37 (multiple-choice vocabulary test) and the variables f099e1 to f099e4 and f099item1 to f099item93 (symbol-digit-test) indicate whether the correct response was given by the respondent.

2 Identifier

There are four identifier, contained in every dataset of PIAAC-L: pnrfestid, hnrid, pnr and seqid. The pnrfestid is the global individual identifier for all individuals. As PIAAC-L follows a household concept in the first and third wave, there is a household-Id (hnrid) to link the information to the datasets ZA5989_Household_14 and ZA5989_Household_16. To link the information to the data of PIAAC 2012, please use the seqid. In some cases, the pnr, which is an index number of persons within the household, has to be combined with the hnrid. The PIAAC- anchor person can be identified in different ways: first of all, the seqid which enables merging with the PIAAC 2012 data is only available for the PIAAC-anchor. Secondly, this person will always have the pnr 01 and the last two digits of the pnrfestid thus will also be 01.

3 Animal naming test

Respondents are asked to specify as many different animals as possible within a time span of 90 seconds. Interviewers enter whether an animal was correctly specified, was repeated or whether an unclear response was given (Lang et al., 2007: 185).

4 Animal naming test: cumulative response time

The test design allowed a time frame of 90 seconds only. Due to technical reasons, in some cases the CAPI software did not terminate the test although 90 seconds were expired. Therefore, the cumulative response time exceeds the limit of 90 seconds in some cases. The variables, which summarize the test results (see section 5), account for this by only considering the responses given within the 90 seconds time frame.

5 Animal naming test: summary

For the animal naming test the variables in this section display (a) the number of correct responses, (b) the number of repeated responses, (c) the number of unclear responses, and (d) the total number of responses within a time frame of 30, 60 and 90 seconds, respectively. Due to technical reasons, in some cases the CAPI software did not terminate the test although 90 seconds were expired. To account for the test design that allowed a time frame of 90 seconds only, for these cases the variables in this section summarize only the correct, incorrect, repeated, and total number of responses that were given within the 90 seconds time frame.

6 Multiple-choice vocabulary intelligence test

In the multiple-choice vocabulary intelligence test, respondents are shown 37 groups of five words. Each group includes one correct (i.e., existing) word and four made-up words. Respondents are asked to identify the correct word within each group (multiple-choice). During the course of the test, the word-groups get more and more difficult. The multiple-choice vocabulary intelligence test lasts around five minutes (Richter et al., 2017: 9). The test items are not allowed to be published.

8 Symbol-digit test

Respondents are asked to pair as quickly as possible specific digits with geometric figures within a time span of 90 seconds. On the computer screen, a band of nine geometric figures with corresponding digits between 1 and 9 are shown and the test instructions are read out to the respondent. The band of corresponding figures and digits remain visible on the top of the screen while respondents have to enter the proper digit to the symbol shown in the center of the screen. The number of correct responses represents an estimate of the respondent's

perceptual information-processing speed (Lang et al., 2007: 185). The tasks of the symbol-digit test are not allowed to be published.

9 Symbol-digit test: cumulative response time

The test design allowed a time frame of 90 seconds only. Due to technical reasons, in some cases the CAPI software did not terminate the test although 90 seconds were expired. Therefore, the cumulative response time exceeds the limit of 90 seconds in some cases. The variables, which summarize the test results (see section 11), account for this by only considering the responses given within the 90 seconds time frame.

11 Symbol-digit test: summary

For the symbol-digit test the variables in this section display (a) the number of correct responses, (b) the number of incorrect responses, and (c) the total number of responses within a time frame of 30, 60 and 90 seconds, respectively. Due to technical reasons, in some cases the CAPI software did not terminate the test although 90 seconds were expired. To account for the test design that allowed a time frame of 90 seconds only, for these cases the variables in this section summarize only the correct, incorrect, and total number of responses that were given within the 90 seconds time frame.
