GLES
German Longitudinal Election Study

GLES 2017
Post-election Cross-Section

ZA6801, Version 4.0.1

Documentation of Questionnaire

The German Longitudinal Election Study (GLES) is the largest and most ambitious national election study held so far in Germany. GLES started with the 2009 federal election as a long-term project funded by the German Research Foundation (Deutsche Forschungsgemeinschaft) and was continued with the 2013 and 2017 federal elections. Since 2018, the GLES is held by GESIS as institutionalized election study in close cooperation with the German Society for Electoral Studies (Deutsche Gesellschaft für Wahlforschung).

Five principal investigators directed GLES 2017: Prof. Dr. Sigrid Roßteutscher (University of Frankfurt), Prof. Dr. Rüdiger Schmitt-Beck (University of Mannheim), Prof. Dr. Harald Schoen (University of Mannheim), Prof. Dr. Bernhard Weßels (Social Science Research Center Berlin), and Prof. Dr. Christof Wolf (GESIS – Leibniz Institute for the Social Sciences), in close cooperation with the German Society for Electoral Studies (Deutsche Gesellschaft für Wahlforschung).

The following documentation refers to the Post-election Cross Section of the GLES 2017 and will give you some general information about the dataset.

Bibliographic description of the dataset

Study No.	ZA6801
Title	Post-election Cross Section (GLES 2017)
Current Version	4.0.1, 02/26/2019
doi	10.4232/1.13235
Citation	Roßteutscher, Sigrid; Schoen, Harald, Schmitt-Beck, Rüdiger; Weßels, Bernhard; Wolf, Christof; Wagner, Aiko (2019): Post-election Cross Section (GLES 2017). GESIS Data Archive, Cologne: ZA6801 Data file Version 4.0.1, doi:10.4232/1.13235

Basic information

Funding agency	German Research Foundation (Deutsche Forschungsgemeinschaft)
Data Collector	Kantar Public Germany
Date of Collection	09/25/2017 – 11/30/2017
Content	The first component of GLES composes a pre- and a post-election cross-section survey. In the post-election cross section, a total of 2,112 interviews were realized.

Methodology

Geographic Coverage	Germany (DE)
Universe	The population comprises all people with German citizenship resident in the Federal Republic of Germany, who had a minimum age of 16 years and lived in private households at the time the survey was being conducted.
Selection Method	Random sampling on the basis of local population registers. Oversampling of population in East Germany.
Mode of Data Collection	Computer Assisted Personal Interview (CAPI), with an average duration of approximately 71 minutes.
Field Work	All in all, 162 sampling points were drawn. The interviewers were paid an attractive and motivating salary. In general, they were compensated based on the number of completed interviews and their expenses. Furthermore, an additional bonus was paid if the interviewers recruit respondents successfully for the GLES panel.
Response Rate	7.5 percent of 7,776 addresses were losses not specific to the sample. Based on the adjusted 7,195 gross addresses, 2,112 interviews were realized successfully. Thus, the response rate is 29.4 percent.

Weights   The pre-election cross section comprises two types of weights: design and post-stratification weights.

The "East-West weighting" (w_ow) includes a special weight factor for the regions of Germany (East, including Berlin, and West). This design weight corrects for the disproportional sample size of these regions.

The "Sociodemographic and regional weights with (and without) transformation weight" create the second type of weights (post-stratification) provided in the dataset. Those weights were calculated by using the iterative proportional fitting (IPF). The iteration process ends when the difference between the weighted marginal distribution and the aimed distribution becomes smaller than 0.0001. To prevent large factors, the weights were trimmed (after each iteration) so that no weight is more than 5 times larger than the average weight. The weights were constructed on the basis of gender, age (4 groups: 16 to 29, 30 to 44, 45 to 59 and 60 years and older), education (three groups: low, middle, high), BIK-regions (three groups) and East-West (for the weighting, all respondents living in Berlin received the East German weighting factor). Missing cases were replaced with the mode. The dataset includes six sociodemographic and regional weights: one weight for Germany as a whole as well as East and West Germany individually. For each of these regions, two weights were included: one with the transformation weight and one without it.

Data access

Usage regulations   Data and documents are released for academic research and teaching: access category A

Anonymized data   According to German privacy, only anonymized data can be made accessible for public download. Thus, some variables had to be deleted from the publicly available dataset or answers were summarized in larger categories.

As a matter of course, no information is lost: All variables can be used by interested researchers in a Secure Data Center (SDC) at GESIS (Cologne, Mannheim). Some variables are also available by signing a user contract. If you are interested in those variables, please send an e-mail to gles@gesis.org. An overview of those variables can be found on our homepage (www.gesis.org/gles).

Errata

There is one person in the dataset for whom information about the year of birth is missing. This person answered the questions about turnout (n10) and eligibility to vote for the German federal election 2013 (n36), although these questions contain age filters. Therefore, a flag variable vn2c_flag was created, marking the respective respondent.

For questions concerning the familarity with and evaluation of constituency candidates (q92 – q104, bzw. n77a-f – vn89), a technical error occured at the beginning of the field work, which led to an incorrect matching of candidate names to the respective electoral district in which the interview was conducted. This concerns 35 interviews in total, to which the code -92 (Error in data) was assigned.

Changes between Version 1.0.0 and Version 2.0.0

- After quality assessment by the survey institute, several cases have been removed from the dataset.
- The job and labour classification codes (ISCO08 and ISCO88) have been added to the dataset. The variables are as follows: q140_i88, q140_i08, q149_i88, q149_i08, q157_i88, q157_i08, q162_i88, q162_i08
- Variables q3s, q4s and q197 have been added to the dataset.

Changes between Version 2.0.0 and Version 3.0.0

- Codings of the open answers to the variables "Most important problem" and "Second most important problem" (q3_c1 – q4_c5) have been added to the dataset.
- The open answers to the variables "Most Important problem" and "Second most important problem" (q3s, q4s) have been deleted.
- The serial number has been corrected.
- The weighting variables have been updated, now using the marginal distributions of the German micro census 2016 (previously micro census 2013).
- The weighting variables have been updated, now using the marginal distributions of the German micro census 2016 (previously micro census 2013).
- The variable bik10 has been removed due to data protection.
- The flag variable q2c_flag has been added to the dataset.

Changes between Version 3.0.0 and Version 4.0.0

- The weighting variables have been updated, now using the marginal distributions of the German micro census 2017 (previously micro census 2016).
- Timestamps are provided in a separate data set.

Changes between Version 4.0.0 and Version 4.0.1

- Publication of an English version of the datasets and questionnaire.

The most recent errata list is provided by the GESIS Data Catalogue (www.gesis.org/dbk). There you can also find a list of all changes made between the different versions of the dataset.

Further remarks

The data of this study is also available as cumulation (ZA6802) with the pre-election cross section (ZA6800).

Two further post-election cross sections have been conducted in a similar way within the GLES 2009 (ZA5301), and GLES 2013 (ZA5701).

You can find more information about GLES at www.gesis.org/gles and http://www.gles.eu.

To get an overview of the use of our data, we kindly request users of GLES-data to inform us about publications that utilize those data (biographic description, study no. of the dataset). Publications using GLES-data are listed in the official bibliography of the GLES project. In case of limited access to your publication (e.g. conference papers), we would highly appreciate if you could send us an electronic (PDF file, gles@gesis.org) or a print copy of your publication.

E-mail: gles@gesis.org

Please note:

As a public service to the international academic community, we provide English translations of GLES datasets, questionnaires, and related important documents. Due to specifics of the original documents in German and the fact that translations were not done by political scientists, the wording of established social and political science questions and constructs in these translations may occasionally deviate somewhat from the Standard English versions. If you have any questions concerning the translations, do not hesitate to contact the principal investigators or their collaborators. For an overview of the whole research team, please have a look at the GLES website http://gles.eu. You can also send an e-mail to gles@gesis.org.

Sequence	Question number	Variable name	Question title
1,000	D01	q1	Gender
2,000	D01.1	q2a-c	Month and year of birth
3,000	Nw517	q3	Most important problem
4,000	Nw518	q4	Second most important problem
5,000	Nw502	q5	Ability to solve the most important problem
6,000	Nw503	q6	Ability to solve the second most important problem

Question text:
Looking now at voting, some people say that no matter who people vote for, it won't make any difference to what happens. Others say that who people vote for can make a big difference to what happens. Using the scale on this card, (where 1 means that voting won't make any difference to what happens in politics and 5 means that voting can make a big difference), where would you place yourself?

Items:

Scale:
(1) 1 Voting won't make any difference to what happens in politics
(2) 2

(3) 3
(4) 4
(5) 5 Voting can make a big difference

Question text:
Now, I would like to know your opinion about several general statements about politics. Please say how much you agree or disagree with each of these statements.

Items:
(A) What people call compromise in politics is really just selling out on one's principles.
(B) The people, and not politicians, should make our most important policy decisions.
(C) The politicians in the German Bundestag need to follow the will of the people.
(D) Differences between the elite and the people are larger than the differences among the people.
(E) I would rather be represented by a citizen than by a specialized politician.
(F) Politicians talk too much and take too little action.
(G) Most politicians are not interested in the opinion of the citizens.
(H) Most politicians are trustworthy.
(I) Politicians are the main problem in Germany.
(J) Having a strong leader in government is good for Germany even if the leader bends the rules to get things done.
(K) Most politicians care only about the interests of the rich and powerful.
(L) I often find political issues difficult to understand.
(M) I have the confidence to take active part in a discussion about political issues.
(N) Politicians care about what ordinary people think.
(O) Today's problems are so complex that politicians are no longer able to solve them.

Scale:
(1) Strongly agree
(2) Agree
(3) Neither agree nor disagree
(4) Disagree
(5) Strongly disagree

Interviewer instruction:
[if there is a request:
The follow-up surveys will probably be conducted 1-2 times a year.
There will be a small present every time
The follow-up surveys will be conducted by GESIS.
The follow-up surveys will of course be anonymous / will comply with data privacy.]

Question text:
Thank you for taking part in the survey.

The federal election is now over, but the Deutsche Wahlstudie goes on.
Your opinion will continue to be important to us in the future!

It is very interesting for us to study how attitudes to political issues develope between general elections.

We would therefore like to invite you to take part in a small continuation of the Deutsche Wahlstudie next year. These short surveys take around 15 minutes.
You can either participate by computer or we will send you a questionnaire by post which you can then send back to us at no cost.

Whatever you would like - we look forward to your participation.
Of course, participation is always voluntary and the agreement you give today does not commit you to participating in the future.

May we invite you?

Items:

Scale:
(1) Yes
(2) No

Interviewer instruction:
[If there are several e-mail addresses, make a note of the address at which the surveyed person wishes to receive invitations.
Please write dots, underscores, hypens, etc. correctly.

Show the e-mail address you have entered to the person again to make sure it is correct.
Use the coding instructions for entering the e-mail provider (hostname) and domain name. If the e-mail provider or domain name is not included in the available codes, please enter it yourself.]

Question text:
You are sure to have noticed that the Internet is becoming more and more important.

This is why we would like to invite you to take part in the next Deutsche Wahlstudie survey by e-mail, which you can then complete online at your own convenience.

Please tell me your e-mail address for this purpose.

Programming instruction:

Interviewer instruction:
[to be filled in by interviewer]
Identification is required as some people share an email address.
For our research it is important that we always talk to the same person.

Question text:
I would now like to ask you to tell me the first letter of your place of birth.

Using your year of birth, month of birth and the first letter of your place of birth we will create a type of password for you which we will ask for the next time we send a survey by post or by e-mail.
