STANDARD EUROBAROMETER 37.0 - TECHNICAL SPECIFICATIONS

Between March 18 and April 15 1992, INRA (EUROPE), a European Network of Market- and Public Opinion Research agencies, carried out wave 37.0 of the STANDARD EUROBAROMETER, on request of the COMMISSION OF THE EUROPEAN COMMUNITIES.

The EUROBAROMETER 37.0 covers the population of the respective nationalities, aged 15 years and over, in each of the Member States of the European Community. The basic sample design applied in all Member States is a multi-stage, random (probability) one. In each EC country, a number of sampling points was drawn with probability proportional to population size (for a total coverage of the country) and to population density.

For doing so, the points were drawn systematically from all "administrative regional units", after stratification by individual unit and type of area. They thus represent the whole territory of the Member States according to the EUROSTAT-NUTS II and according to the distribution of the national, resident population in terms of metropolitan, urban and rural areas. In each of the selected sampling points, a starting address was drawn, at random. Further addresses were selected as every Nth address by standard random route procedures, from the initial address. In each household, the respondent was drawn, at random. All interviews were face-to-face in people's home and in the appropriate national language.

For each country a comparison between the sample and the universe was carried out. The Universe description was derived from EUROSTAT population data. For all EC member-countries a national weighting procedure, using marginal and intercellular weighting, was carried out based on this Universe description. As such in all countries, minimum sex, age, region NUTS II and size of locality were introduced in the iteration procedure. For international weighting (i.e. EC averages), INRA (EUROPE) applies the official population figures as published by EUROSTAT in the Regional Statistics Yearbook of 1988. The total population figures for input in this post-weighting procedure are listed above.

The results of the EUROBAROMETER studies are reported in the form of tables, datafiles and analyses. Per question a table of results is given with the full question text (English and French) on top; the results are expressed 1) as a percentage on total base and 2) as a percentage on the number of "valid" responses (i.e. "Don't Know" and "No Answer" excluded). All EUROBAROMETER datafiles are stored at the Zentral Archiv (Universität Köln, Bachemer Strasse, 40, D-5000 Köln 41). They are at the disposal of all institutes members of the European Consortium for Political Research (Essex), of the Inter-University Consortium for Political and Social Research (Michigan) and of all those interested in social science research. The results of the EUROBAROMETER surveys are analysed and made available through the Unit "Surveys, Research, Analyses" of DG X of the Commission of the EC, "EUROBAROMETER", Rue de la Loi 200, B-1049 Brussels.

Readers are reminded that survey results are estimations, the accuracy of which, everything being equal, rests upon the sample size and upon the observed percentage. With samples of about 1.000 interviews, the real percentages vary within the following confidence limits :

Observed percentages	10% or 90%	20% or 80%	30% or 70%	40% or 60%	50%
Confidence limits	± 1.9%	± 2.5%	± 2.7%	± 3.0%	± 3.1%
