Conduction of this survey

This telephone Survey FLASH 141 on the “Enlargement Communication Strategy” in the UK has been commissioned by the EU Representation in the UK.

It is a GENERAL PUBLIC FLASH EUROBAROMETER SURVEY, organized and managed by the PRESS General Directorate, Unit B/1 by telephone.

The interviews have been conducted between the 15/04/2003 and the 27/04/2003 by ICM, the EOS GALLUP EUROPE Institute in UK :

Royaume Uni

UK

ICM - LONDON

(Interviews : 15/04/2003 – 27/04/2003)

United Kingdom

Representativity of the results

Equal numbers of interviews were achieved in each region of the country thereby enabling statistical comparisons between the regions. Data within each region were weighted to the profile of all adults in that area. To obtain data representative of the whole country, data were then weighted to reflect the actual proportion of the total population living in each area.

Sizes of the sample

ICM Research interviewed a random sample of 6,006 people aged 15+ by telephone

	Total interviews	
	(1)	(2)
	Réalisées	% du total
	Conducted	% on total
Total UK	6006	100.0%
North	500	8.3%
North West	502	8.4%
Yorks & Humberside	502	8.4%
East Midlands	500	8.3%
West Midlands	500	8.3%
Eastern	500	8.3%
Greater London	500	8.3%
South East	500	8.3%
South West	500	8.3%
Wales	501	8.3%
Scotland	500	8.3%
Northern Ireland	501	8.3%

Statistical significance of the results

The results in a survey are valid only between the limits of a **statistical margin** caused by the sampling process. This margin varies with three factors :

1. The sample size (or the size of the analysed part in the sample) : the greater the number of respondents is, the smaller the statistical margin will be;
2. The result in itself : the closer the result approaches 50%, the wider the statistical margin will be ;
3. The desired degree of confidence : the more "strict" we are, the wider the statistical margin will be.

As an example, examine this illustrative case :

1. One question has been answered by 500 people ;
2. The analysed result is around 50% ;
3. We choose a significance level of 95 % (it is the level most often used by the statisticians, and it is the one chosen for the Table hereafter);

In this illustrative case the statistical margin is : (+/- 4.4%) around the observed 50%. And as a conclusion : the result for the whole population lies between 45.6% and 54.4 %.

In the next page we've reproduced the statistical margins computed for various observed results, on various sample sizes, at the 95% significance level.
