6. Survey details

This survey on the "Introduction of the euro in the New Member States, Wave 6" was conducted for the European Commission, Directorate-General Economic and Financial Affairs.

Telephone interviews were conducted in each country with the exception of the Bulgaria, Czech Republic, Estonia, Latvia, Lithuania, Hungary, Poland, Romania and Slovakia where both telephone and face-to-face interviews were conducted (700 webCATI and 300 F2F interviews). The interviews were conducted between the 17/09/2007 and the 21/09/2007 by these Institutes:

</table>

Representativeness of the results

Each national sample is representative of the population aged 15 years and above.

Sizes of the sample

The sample sizes amount to approximately 1000 respondents in each country.

A weighting factor was applied to the national results in order to compute a marginal total where each country contributes to the European Union result in proportion to its population.

The table below presents, for each of the 10 Member States:
(1) the number of interviews actually carried out in each country
(2) the population-weighted total number of interviews for each Member State

Questionnaires

1. The questionnaire prepared for this survey is reproduced at the end of this results volume, in English (see hereafter).
2. The institutes listed above translated the questionnaire in their respective national language(s).
3. One copy of each national questionnaire is annexed to the data tables’ results volumes.

Tables of results

VOLUME A : COUNTRY BY COUNTRY
The VOLUME A presents the European Union results country by country.

VOLUME B : RESPONDENTS’ DEMOGRAPHICS
The VOLUME B presents the European Union results with the following sociodemographic characteristics of respondents as breakdowns:

Volume B:
Sex (Male, Female)
Age (15-24, 25-39, 40-54, 55+)
Education (15&-, 16-20, 21&+, Still in full time education)
Subjective urbanisation (Metropolitan zone, Other town/urban centre, Rural zone)
Occupation (Self-employed, Employee, Manual worker, Not working)
Sampling error

The results in a survey are valid only between the limits of a statistical margin caused by the sampling process. This margin varies with three factors:

1. The sample size (or the size of the analysed part in the sample): the greater the number of respondents is, the smaller the statistical margin will be;
2. The result in itself: the closer the result approaches 50%, the wider the statistical margin will be;
3. The desired degree of confidence: the more "strict" we are, the wider the statistical margin will be.

As an example, examine this illustrative case:
1. One question has been answered by 500 people;
2. The analysed result is around 50%;
3. We choose a significance level of 95% (it is the level most often used by the statisticians, and it is the one chosen for the Table hereafter);

In this illustrative case the statistical margin is: (+/- 4.4%) around the observed 50%. And as a conclusion: the result for the whole population lies between 45.6% and 54.4%.

Hereafter, the statistical margins computed for various observed results are shown, on various sample sizes, at the 95% significance level.

STATISTICAL MARGINS DUE TO THE SAMPLING PROCESS (AT THE 95 % LEVEL OF CONFIDENCE)
