[LIRE – UNE SEULE REPONSE POSSIBLE]

- Vous en prenez tous les jours .......................................................... 1
- Vous en prenez occasionnellement ................................................... 2
- Vous en preniez régulièrement mais vous avez cessé ...................... 3
- Vous avez essayé au moins une fois ................................................. 4
- Vous n'avez jamais essayé ................................................................. 5
- [NSP/SR] ............................................................................................. 9
Tobacco smoke exposure at home

SPLIT BALLOT

ASK Q3A ONLY IF NON-SMOKERS (CODE 3 OR 4 IN Q1)

Q3a Does any person living with you smoke inside your home?

[READ OUT – ONE ANSWER ONLY]

You live alone ................................................................. 1
No one living with you smokes inside the house ................. 2
Someone living with you smokes inside the house ................ 3
[DK/NA] .............................................................................. 9

Exposition au tabac à la maison

SPLIT BALLOT

POSER Q3A UNIQUEMENT SI NON-FUMEURS (CODE 3 OU 4 EN Q1)

Q3a Est-ce qu’une personne vivant avec vous fume à l’intérieur de votre domicile?

[LIRE – UNE SEULE REPONSE POSSIBLE]

Vous vivez seul(e) ............................................................................... 1
Personne vivant avec vous ne fume à l’intérieur de la maison ....... 2
Quelqu’un vivant avec vous fume à l’intérieur de la maison .......... 3
[NSP/SR] .................................................................................. 9
ASK Q3b only if smokers (CODE 1, 2 or 9 in Q1)

Q3b  Do you or any other person living with you smoke inside your home?

[READ OUT – ONE ANSWER ONLY]

You live alone...................................................................................... 1
You live with someone and none of you smoke inside the house ...... 2
You live with someone and only you smoke inside the house......... 3
Only someone living with you smokes inside the house............... 4
Both you and someone living with you smoke inside the house..... 5
[DK/NA] ............................................................................................... 9

POSER Q3B UNIQUEMENT SI FUMEURS (CODE 1,2 OU 9 EN Q1)

Q3b  Est-ce que vous-même ou une quelconque autre personne vivant avec vous fumez/fume à l’intérieur de votre domicile?

[LIRE – UNE SEULE REPONSE POSSIBLE]

Vous vivez seul(e).....................................................................................1
Vous vivez avec quelqu’un et aucun d’entre vous ne fume à l’intérieur de la maison .................................................................2
Vous vivez avec quelqu’un et vous seulement fumez à l’intérieur de la maison .................................................................3
Seul quelqu’un vivant avec vous fume à l’intérieur de la maison.......4
Vous-même et quelqu’un vivant avec vous fumez à l’intérieur de la maison .................................................................5
[NSP/SR] .............................................................................................9

Flash EB Series #253

Survey on Tobacco

Conducted by
The Gallup Organisation, Hungary
upon the request of Directorate General Health and Consumers

Survey co-ordinated by
Directorate General Communication

This document does not represent the point of view of the European Commission.
The interpretations and opinions contained in it are solely those of the authors.

THE GALLUP ORGANISATION
II. Survey details

This general population survey “Survey on Tobacco” (No 253) was conducted for the European Commission, DG Health and Consumers.

Telephone interviews were conducted in each country, with the exception of the Bulgaria, Czech Republic, Estonia, Latvia, Lithuania, Hungary, Poland, Romania and Slovakia where both telephone and face-to-face interviews were conducted (70% webCATI and 30% F2F interviews).

Telephone interviews were conducted in each country between the 13/12/2008 and the 17/12/2008 by the following institutes:

Representativeness of the results

Each national sample is representative of the population aged 15 years and above.

Sample sizes

In most EU countries the target sample size was 1000 respondents. In Cyprus, Malta and Luxembourg the target was 500 interviews, and Norway was involved into this survey with 1000 interviews, the table below shows the achieved sample size by country.
A weighting factor was applied to the national results in order to compute a marginal total where each country contributes to the European Union result in proportion to its population.

The table below presents, for each of the countries:
(1) the number of interviews actually carried out
(2) the population-weighted total number of interviews

**Questionnaires**

1. The questionnaire prepared for this survey is reproduced at the end of this results volume, in English.
2. The institutes listed above translated the questionnaire in their respective national language(s).
Sampling error

Surveys are designed and conducted to provide an estimate of a true value of characteristics of a population at a given time. An estimate of a survey is unlikely to exactly equal the true population quantity of interest for a variety of reasons. One of these reasons is that data in a survey are collected from only some – a sample of – members of the population, this to make data collection cheaper and faster. The “margin of error” is a common summary of sampling error, which quantifies uncertainty about (or confidence in) a survey result.

Usually, one calculates a 95 percent confidence interval of the format: \( \text{survey estimate} \pm \text{margin of error} \). This interval of values will contain the true population value at least 95% of time.

For example, if it was estimated that 45% of EU citizens are in favour of a single European currency and this estimate is based on a sample of 100 EU citizens, the associated margin of error is about 10 percentage points. The 95 percent confidence interval for support for a European single currency would be (45%-10%) to (45%+10%), suggesting that in the EU the support for a European single currency could range from 35% to 55%. Because of the small sample size of 100 EU citizens, there is considerable uncertainty about whether or not the citizens of the EU support a single currency.

As a general rule, the more interviews conducted (sample size), the smaller the margin of error. Larger samples are more likely to give results closer to the true population quantity and thus have smaller margins of error. For example, a sample of 500 will produce a margin of error of no more than about 4.5 percentage points, and a sample of 1,000 will produce a margin of error of no more than about 3 percentage points.

Margin of error (95% confidence interval)

</tbody>
</table>
The values in the table are the margin of error – at 95% confidence level – for a given survey estimate and sample size.

The examples show that the size of a sample is a crucial factor affecting the margin of error. Nevertheless, once past a certain point – a sample size of 800 or 1,000 – the improvement is small. For example, to reduce the margin of error to 1.5% would require a sample size of 4,000.
Evaluation of the samples

The attached tables (after the Technical Report tables) provide a detailed insight to the within country weighting of the study. (For cross-country weights please refer to the table on previous page) The weighting of the dataset is a three-fold exercise.

In the first step we will apply the basic selection probability weights, primarily to avoid the overcoverage of households with multiple telephone lines. In the same step, we calculate the weights that corrects the estimations based on the merged dual frame samples, i.e., weights that deal with phone owners;

In the second step, on a country-by-country basis, a nonresponse population weighting was carried out. As nonresponse rates vary by social segments, the sample characteristics reflect such differences as well (i.e., there are usually less males and especially less young people in the samples than in the universe.) In this step, we compensated for the nonresponse bias that stems from the field execution process. The most advanced method for eliminating such deviations is the so-called Raking Adjustment for Nonresponse (raking). Gallup applied this method. This procedure performs iterative proportional fitting in contingency table analysis. This method is also used to deal with the problem of large variability of weights when weighting classes are formed based on full cross-classification of the auxiliary variables, the result is a large number of weighting classes with unstable response rates.

However, one drawback is that raking assumes that the variables used for adjustment are independent. Raking works in the following way:
1) sets initial weight factor values in each cross-classification term to 1;
2) adjusts the weight factors of the first cross-classification term so the weighted sample is representative for the variables involved;
3) adjusts the weight factors for the next cross-classification term so the weighted sample becomes representative with respect to the variables involved (this might disrupt the representativeness with respect to the variables involved);
4) repeats this adjustment for all cross-classification terms;
5) repeats all steps until the factors do not change.

A common approach to weighting is to determine the sample weights adjusting for unequal probabilities of selection, revise these weights to compensate for different sub-class response rates, and finally modify the weights again to conform the weighted sample distribution for certain variables (e.g., age, gender, education, activity etc.) to the known population distributions of the same variables.

The following variables will be used in all national raking procedures (with categories levels used):

**Age X Sex**
- male, 15-29
- male, 30-49
- male, 50 -64
- male 65+
- female, 15-29
- female, 30-49
- female, 50-64
- female, 65+

**Activity**
- Active worker
- retired
- Other non-active worker

**Regions (NUTS2)**

Please note that levels might be collapsed to achieve convergence or universe information is not available in the necessary detail.
