## Acknowledgement of assistance

The 2009 EES voter study would not have been possible without the help of many colleagues, both members of the PIREDEU team and country experts from the wider academic community, who spent valuable time on the questionnaire and data, often at very short notice. We would like to acknowledge their work here and thank them warmly, for without their assistance the EES 2009 would certainly be of lesser quality.

## Introduction

The Advance Release Notes accompany the Advance Release of the 2009 EES Voter Study. They are not intended as a complete codebook, but instead are aimed to provide users of the advance release data – typically users who are accustomed to working with large-scale, cross-country datasets – with sufficient information to make good use of the data. Those users seeking a fully documented version of the data should wait for the 2009 EES Voter Study Final Release, expected by end of 2010.

We provide the current data with a note of caution. Initial cleaning of the data has been put into effect and a number of issues has been detected and corrected. However, this is not the Final Release and users should be aware that some errors may have gone undetected. We encourage users of the data to contact us should they suspect errors or anomalies in the data via email at [vanEgmond@uva.nl](mailto:vanEgmond@uva.nl) (Marcel van Egmond) or [Eliyahu.Sapir@nottingham.ac.uk](mailto:Eliyahu.Sapir@nottingham.ac.uk) (Eli Sapir).

While this Advanced Released will be followed by a Final Release by end of 2010, users will be happy to learn the structure of the file, including variable names and variable coding, including missing value codes, will remain unchanged (barring any errors as yet undetected). Users are therefore encouraged to retain their setup files (analyses and recodes etc.), as these should function (virtually) unchanged on the Final Release data as well.

### Note on updated advance release notes (30 June 2010)

In the original advance release notes, an error was detected that affected the labeling for questions Q39, Q47 and Q81 for Poland (only). In this updated release, this error has been corrected.

In addition, minor inconsistencies of the labeling of the same questions in three other countries (Hungary, Ireland, and Spain) have been corrected.

**ALL THESE CHANGES ARE ACTUALLY IMPLEMENTED IN THE EXCEL SHEET, NOT THESE NOTES**

## Data collection

Data collection was started on the first working day following the 2009 European Parliament elections (4 to 7 June 2009). Intended sample size was 1,000 successful interviews each EU member state.

Data collection was done by CATI phone interview. In seven countries (Bulgaria, Czech Republic, Estonia, Hungary, Latvia, Lithuania, Poland, Romania and Slovakia) representative phone sampling was not feasible. In these countries, 70 percent of interviews were achieved by face-to-face mode, while the remaining 30 percent was achieved by phone. Exclude mode-effects as much as possible, face-to-face interview did not use additional aids such as showcards, except for questions Q101 (level of education) and Q113 (occupation) where showcards were used.

## Structure of the data file

### Variable names

The data file consists of three sets of variables, distinguished by the preceding characters T, Q and V.

T variables describe the interview, e.g., respondent id, country, date/length/mode of interview, et cetera.

Q variables comprise the interview questions. Both variable order and -numbering reflect that of the 2009 questionnaire.

V variables are additional variables, based either on additional information from the fieldwork agency, or derived on the basis of questionnaire variables. Currently, only a per-country weight factor is included (V100), as well as a country-comparable education variable based on ISCED coding (V200). It is foreseen that the number of V-variables will increase in a future release, but current variables names will be respected.

### Missing Values

Where possible, Q variables follow an identical missing values labeling scheme.

For 1 digit variables, this consists of:

- 7: Refused [REF]
- 8: Don't Know [DK]
- 9: Not Applicable/not available [NAP]

For two digit variables, the labeling scheme is

- 77: Refused [REF]
- 88: Don't Know [DK]
- 99: Not Applicable/not available [NAP]

In addition, a number of variables (e.g., vote choice) have additional missing value labels within this range. Where relevant, consistent labeling has been implemented.

Please note that *no* missing values have been defined in the Advance Release file, so it is up to the researcher to decide how to deal with various causes of missing data.

### Country specific labeling

For a number of variables, country specific labels have been used in the questionnaires. Examples of these are party choice questions and level of education, amongst others. In the integrated data file, these variables would cause problems since values are not identical across countries. Hence, country specific codes have been constructed by preceding the question codes by a country values, consisting of the 3-digit ISO-code of the country and preceded by a 1. This 4-digit country prefix is hence identical to the country codes used in variable T102 (and referred to as 1+ISO).

Where possible, the original question codes have been maintained as suffixes. Missing values are not country specific.

A special case form the questions regarding placement of parties along the left-right continuum (Q47\_), EU-unification continuum (Q81\_) and the probability to vote questions (Q39\_). For these variables, not the answer options, but the actual questions vary by country. For these three sets of questions, the specific party probed is described in these release notes (see below).

We note that the order of these party-questions is identical for all three questions (i.e., Q47\_1 probes the same party as Q81\_1 and Q39\_1, for each country) and is identical to the order used in the original country questionnaires. An excel sheet, containing party probed (per variable), as well as the corresponding party codes (used in the vote choice and party ID questions), is provided for the user's convenience.

### Variables not yet available for release

A small number of variables are not yet available for release. Reasons for this include matters the risk of identity disclosure, (additional) funding restrictions and data integrity and coding. Except where identity disclosure prevents this, all data will be made available in the Final Release.

## Variable Specific notes

The following is a description of those variables where additional information may be required.

### Q8\_x & Q12\_x: Media outlets watched (prompted)

Each variable (q8\_a to q8\_d, q12\_a to q12\_c) prompts for the following outlet in the respective countries.

Country	Q8	TV Program	Q12	Newspapers

**Q25-Q28 – Party Choice**

Questions q25-q28 ask for EU and national party choice – the answer options (parties) vary per country.

Country specific codes have been recoded and now start with a country prefix (1+ISO) followed by a specific code per party. Labels are included in the integrated data file. See attached excel sheet “ees 2009 party codes & variables.xls” for the party names and codes used in these questions, as well as questions q39, q47, q81, q87 and q90.

Additional missing values codes (9x) are labeled per question in the file.

Please note that in **Luxembourg** EP elections are always concurrent with national parliament elections. Q28 therefore asks what R voted in the concurrent national election.

**Q26b (Ireland and Belgium only)**

What party voted for in the local/regional election, held concurrently.

Please note that in Ireland this question was originally omitted for the first approximately 300 respondents. When this error was discovered, attempts were made to recontact this group. Variable **t204** indicates whether a respondent was part of this call-back group. If no re-contact could be made, variable q26b was coded NAP.

**Q28 Luxembourg**

Please note that in Luxembourg EP elections are always concurrent with national parliament elections. Q28 therefore asks what R voted in the concurrent national election.

**Q39\_ pxx, Q47\_ pxx, Q81\_ pxx**

Q39\_ pxx (probability to vote), Q47\_ pxx (left-right placement) Q81\_ pxx (EU unification stance): each questions probes one specific party. The party probed is documented in the attached excel sheet “ees 2009 party codes & variables V2.xls”.

*(please note that the labels of these variables have been corrected for Poland)*

The suffixes (\_pxx) are consistent for all three blocs of questions, and are identical to those used in the original language questionnaires

Note that *order* of the parties is fixed, and identical to that used in the original language questionnaire. The **starting point** of the rotation (first question asked) varies per respondent and question bloc, and is recorded in T variable **T501** (for q39\_ pxx), **T502** (for Q47\_ pxx) and **T504** (for Q81\_ pxx)

**T503** records the starting point for rotation bloc **Q56-Q63Q**

**Q82\_1 & Q82 [country] or European citizen**

Q82 probes whether R views themselves as a citizen of Europe or of their country.

For countries with substantial minorities/regions (Belgium, Estonia, Latvia, Lithuania and Finland), Q82 is preceded by Q82\_1, where R is asked with which of the two groups R identifies. Subsequently Q82 was asked, with the answer to Q82\_1 inserted as [country].

Q82\_1 codes 1 and 2 indicate the following for the countries concerned:

Country	Nationality 1	Nationality 2
Belgium – Flanders	Belgian	Flemmish
Belgium – Wallonia	Belgian	Walloon
Estonia	Estonian	Russian
Finland	Finnish	Swedish
Latvia	Latvian	Russian
Lithuania	Lithuanian	Russian

Code **99 [NAP]** indicates the question was not posed for this respondent/country.

**T505** records the starting point for rotation bloc **Q92-Q98**

#### **Q92-Q98 Political knowledge questions.**

To ease analysis (and avoid possible embarrassment), the correct answers are

q92: False (2)

q93: False (2)

q94: False (2)

q95: True (1)

q96: True (1)

q97:

q98: False (2)

#### **Q113 – Occupation (closed answer options)**

Respondent occupation, pre-categorized. The labels included in the datafile give the general header included in each country. However, because of country-specific occupational characteristics, the user is advised to check the original questionnaire text to compare the actual examples used to further describe the general labels in each of the different countries.

NOTE: In the **Luxembourg, German** language version the categories 11 and 12 were included as categories 1 and 2 in the questionnaire. This has been changed, in line with category order used in all other countries.

NOTE: In **Hungary** categories 10, 11 and 12 were omitted from the questionnaire. Category 9 combines what in other countries is included as categories 9 and 10.

#### **V100 Sample weight per country**

Sample weight (non-response population weight to correct for sampling disparities) provided by the fieldwork organization to achieve a nationally

representative sample on a per country basis, based on the factors age/sex, education and region.

### **V200 Education – ISCED**

Q101 & Q101b provide detailed information on education (highest level completed) through country specific answer options. V200 provides a cross-country comparative indicator of education level, based on the ISCED classification

([http://www.unesco.org/education/information/nfsunesco/doc/isced\\_1997.htm](http://www.unesco.org/education/information/nfsunesco/doc/isced_1997.htm))

ISCED main levels are:

Level 0 - Pre-primary education

Level 1 - Primary education or first stage of basic education

Level 2 - Lower secondary or second stage of basic education

Level 3 - (Upper) secondary education

Level 4 - Post-secondary non-tertiary education

Level 5 - First stage of tertiary education

Level 6 - Second stage of tertiary education

Variable name:	Country code (T102)	Probability to Vote (Q39_pX)	Left-Right placement (Q47_pX)	EU integration stance (Q81_pX)	Party name used in questionnaire	Party name in English	Party code in vote choice/id questions (q25 q26 q27 q28 q87 & q90)

## **Update in the documentation for the 2009 European Election Voter Study**

30 June 2010

### **Correction to labeling for Poland:**

One of our users alerted us to an error that affected three questions in Poland. The questions are Q39\_pxx, Q47\_pxx and Q81\_pxx (the “probability to vote” questions, the questions on left-right placement and on EU-integration). Unfortunately, the labeling order included in the documentation (provided to us by the fieldwork agency) proved incorrect. The correct order is now included in the updated documentation, and, for your convenience, below.

<b>Probability to Vote</b>	<b>Left-Right placement</b>	<b>EU integration stance</b>	<b>Party name used in questionnaire</b>	<b>Party name in English</b>	<b>Party code in vote choice/id questions</b>
					<b>(q25 q26 q27 q28 q87 &amp; q90)</b>
			<b>Poland</b>		
Q39_p2	Q47_p2	Q81_p2	Polskie Stronnictwo Ludowe	Polish Peoples Party	1616811
Q39_p5	Q47_p5	Q81_p5	Libertas	Libertas	1616010
Q39_p6	Q47_p6	Q81_p6	Koalicyjny Komitet Wyborczy Porozumienie dla Przyszłości - CentroLewica (PD+SDPL+Zieloni 2004)	Coalition Agreement for the Future - CenterLeft	1616011
Q39_p7	Q47_p7	Q81_p7	Sojusz Lewicy Demokratycznej (SLD)	Democratic Left Alliance	1616210
Q39_p9	Q47_p9	Q81_p9	Platforma Obywatelska	Civic Platform	1616435
Q39_p10	Q47_p10	Q81_p10	Prawo i Sprawiedliwość	Law and Justice	1616436

The implications of this error pertain to Poland only.

If merely the scores on the above questions are used as dependent or independent variable, then the outcomes may have appeared odd when connected with the party the questions supposedly were to indicate. The model itself would have been correct, however (explanatory power, influence of various factors remain unchanged).

If however a connection is made between any of the three questions involved and the questions pertaining to party choice or -preference (e.g., q25 q26 q27 q28 q87 & q90) or to any external information regarding any of the parties (e.g., contextual information about election results, campaign spending) then this will create erroneous findings since the information will be related to the wrong parties. In this case, the information will have to be remapped to the correct parties.

### **Minor correction for Hungary, Ireland and Spain:**

We also include a minor correction to the party numbering for the same questions (Q39\_pxx, Q47\_pxx and Q81\_pxx) for Hungary, Ireland and Spain. For Hungary and Spain, the parties were not numbered consecutively from 1 onwards, while for Ireland the option p9 for Q39 was not labeled. We include these corrections below.

Probability to Vote	Left-Right placement	EU integration stance	Party name used in questionnaire	Party name in English	Party code in vote choice/id questions
					(q25 q26 q27 q28 q87 & q90)
			<b>Hungary</b>		
Q39_p1	Q47_p1	Q81_p1	Fidesz-Magyar Polgári Párt	Fidesz-Hungarian Civic Union	1348421
Q39_p2	Q47_p2	Q81_p2	Jobbik	Movement for a Better Hungary	1348700
Q39_p4	Q47_p4	Q81_p4	Magyar Kommunista Munkáspárt	Hungarian Communist Workers Party	1348210
Q39_p6	Q47_p6	Q81_p6	MDF, Magyar Demokrata Fórum	Hungarian Democratic Forum	1348521
Q39_p7	Q47_p7	Q81_p7	MSZP, Magyar Szocialista Párt	Hungarian Socialist Party	1348220
Q39_p8	Q47_p8	Q81_p8	SZDSZ, Szabad Demokraták Szövetsége	Alliance of Free Democrats	1348422
Q39_p9	Q47_p9	Q81_p9	KDNP, Kereszténydemokrata Néppárt	Christian Democratic Peoples Party	1348526
			<b>Ireland</b>

Q39_p6	Q47_p6	Q81_p6	Libertas	Libertas	1372001
Q39_p9			an independent candidate	An independent candidate*	1372000
			<b>Spain</b>		
Q39_p1	Q47_p1	Q81_p1	PP (Partido Popular)	Peoples Party	1724610
Q39_p2	Q47_p2	Q81_p2	PSOE (Partido Socialista Obrero Español)	Spanish Socialist Workers Party	1724320
Q39_p3	Q47_p3	Q81_p3	IU (Izquierda Unida) - IC-V (Iniciativa per Catalunya - Verds)	United Left	1724220
Q39_p5	Q47_p5	Q81_p5	UPyD (Unión Progreso y Democracia)	Union, Progress, and Democracy	1724010
Q39_p6	Q47_p6	Q81_p6	CiU (Convergencia i Unió)	Convergence and Union	1724007
Q39_p7	Q47_p7	Q81_p7	ERC (Esquerra Republicana de Catalunya)	Republican Left of Catalonia	1724905
Q39_p8	Q47_p8	Q81_p8	EAJ-PNV (Euzko Alderdi Jeltzalea-Partido Nacionalista Vasco)	Basque Nationalist Party	1724902
Q39_p9	Q47_p9	Q81_p9	BNG (Bloque Nacionalista Galego)	Galician Nationalist Bloc	1724908
Q39_p10	Q47_p10	Q81_p10	CC-PNC (Coalición Canaria-Partido Nacionalista Canario)	Canarian Coalition	1724907
Q39_p11	Q47_p11	Q81_p11	NA-BAI (Nafarroa Bai)	Navarre Yes	1724923
Q39_p12	Q47_p12	Q81_p12	EA (Eusko Alkartasuna)	Basque Social Democracy	1724903

We note that none of the above issues require changes to the data file as released.

We are very sorry for these errors, which unfortunately however were beyond our control. We understand that it may lead to extra work for some of you in analysis already executed. We hope of course that further errors will not appear, but we urge you to share with us any information if you feel an error may still be contained in the data.

## **PIREDEU EES2009 Voter Study May 2011 release notes**

Eliyahu V. Sapir and Cees van der Eijk  
Methods and Data Institute  
University of Nottingham  
22 June 2011

### **What's new in this release?**

#### ***I. Data post-processing***

##### *Missing data*

For some variables system-missing values assigned in the included in the advance release version of the data were changed into 'NAP' values. This was done in cases where the missing information was the result of questionnaire routing. In all other instances leading to absence of information and which could not be classified as 'DK' or 'refused', the system missing values were changed into 'UNAVAILABLE'.

These changes occurred in the following variables:

t401, t402, t502, q5, q6, q7, q8\_a, q8\_b, q8\_c, q8\_d, q11a, q11b, q11c, q11d, q11e, q12\_a, q12\_b, q12\_c, q15a, q15b, q15c, q15d, q15e, q21\_a, q21\_b, q21\_c, q21\_d, q21\_e, q21\_f, q21\_g, q21\_h, q88, q89, q108, q9, q13, q16, q17, q18, q19, q20, q21\_i, q23, q24, q39\_p1, q39\_p2, q39\_p3, q39\_p4, q39\_p5, q39\_p6, q39\_p7, q39\_p8, q39\_p9, q39\_p10, q39\_p11, q39\_p12, q39\_p13, q39\_p14, q39\_p15, q40, q41, q42, q43, q44, q45, q46, q47\_p1, q47\_p2, q47\_p3, q47\_p4, q47\_p5, q47\_p6, q47\_p7, q47\_p9, q47\_p10, q47\_p11, q47\_p12, q47\_p13, q47\_p14, q47\_p15, q48, q49, q56, q57, q58, q59, q60, q61, q62, q63, q64, q65, q66, q67, q78, q79, q80, q81\_p1, q81\_p2, q81\_p3, q81\_p4, q81\_p5, q81\_p6, q81\_p7, q81\_p8, q81\_p9, q81\_p10, q81\_p11, q81\_p12, q81\_p13, q81\_p14, q81\_p15, q82\_1, q82, q83, q84, q85, q86, q91, t505, q92, q93, q94, q95, q96, q97, q98, q99, q100, q102, q104, q109, q110, q111, q113, q114, q115, q117, q118, q119, q120, v200,

##### *Party support variable labels*

English Party labels were added to the existing, original language labels. These changes pertain to the following variables: q4, q25, q26, q26b, q27, q28, q87, q90, and v132.

##### *Country of origin*

Three questions relating to country of origin (R's, R's father's and mother's) were followed by a verbatim description of 'other' than the coded countries in the original variables. In all cases where this could be done unequivocally, these verbatim descriptions were coded into country codes in the original variables – q105-q107.

In all cases where the verbatim description does not coincide with an existing country code, the code 'other' was assigned in q105, q106 and q107, and the verbatim answer remained in q105\_O1, q106\_O1 and q107\_O1.

##### *Deletion of a redundant variable*

Up to 6 additional mentions of voter advice websites were coded from responses to Q22. It turns out that no respondent has provided so many answers. As a consequence, one of the variables from the previous release, q22b\_O6, contained no valid information, and was therefore removed from the dataset.

## ***II. New variables***

The following new variables, which were not included in the advance release dataset were added to the PIREDEU dataset in the May 2011 release:

### *Interviewer information*

- t201 Interviewer ID – existed in the advance release. Added a preceding four-digit country code.
- t201a Interviewer gender
- t201b Interviewer year of birth
- t201c Interviewer nationality
- t201d Interviewer native language
- t201e Interviewer years of experience

### *Most important problems*

q1- q3: First, second and third most important problems as reported by Rs. This data was coded according to the category scheme reflected in the value labels.

### *EU/government responsibilities (for full question text, see questionnaires)*

- q29 Responsibility of government for economic conditions
- q30 Responsibility of EU for economic conditions
- q31 Responsibility of government for standards of health care
- q32 Responsibility of EU for standards of health care
- q33 Responsibility of government for levels of immigration
- q34 Responsibility of EU for levels of immigration
- q35 Responsibility of government for setting interest rates
- q36 Responsibility of EU for setting interest rates
- q37 Responsibility of government for dealing with climate change
- q38 Responsibility of EU for dealing with climate change

### *Retrospective and Prospective evaluations (for full question text, see questionnaires).*

- q48 retrospective sociotropic economic evaluation
- q49 prospective sociotropic economic evaluation
- q50 Retrospective perception of changes in standards of health care
- q51 Retrospective perception of changes in levels of immigration
- q52 Evaluation of changes in levels of immigration
- q53 Retrospective perception of changes in interest rates
- q54 Evaluation of changes in interest rates
- q55 Retrospective perception of changes in climate change

### *Government and EU responsibility for Social issues.*

### *Impact of Government and EU policies (for full question text, see questionnaires).*

- q68 Impact of government policies on economic conditions
- q69 Impact of government policies on standards of health care
- q70 Impact of government policies on levels of immigration
- q71 Impact of government policies on interest rates
- q72 Impact of government policies on climate change
- q73 Impact of EU policies on economic conditions
- q74 Impact of EU policies on standards of health care
- q75 Impact of EU policies on levels of immigration

q76 Impact of EU policies on interest rates  
q77 Impact of EU policies on climate change

### ***III. Newly added derived variables***

#### *v111-v117/v121-v127: Selection probabilities/inverse probabilities*

The ‘selection probabilities’ provide for each member state the ratio of that country’s eligible population to that of the entire EU (i.e. the probability a respondent from country X will be sampled), based on the eligible population size in each of the countries. The inverse probabilities provide the number of fellow countrymen/women each sample observation represents. Each of these variables was calculated seven times, to correspond with different sets of member states that represent the historical configurations of the EU/EC (i.e., the EC-6, EC-9, EC-10, EU-12, EU-15, EU-25, EU-27).

Multiplying the sample weight (v100) by the selection probabilities will result in a weighted sample of roughly the original number of EU-wide observations. Multiplying it by the inverse probabilities will result in a weighted sample of roughly 400 million observations (corresponding with the EU eligible population as of 2009), and will be useful for researchers interested in estimating the absolute magnitudes of sub-populations.

#### *v131 and v132: Political Weights*

Two political weights were added in this release, to calibrate the data distribution based on the EP electoral results. The difference between the two is in how they treat non-voters. V131 accounts for non-voters, and calibrates the voting distribution based on the real distribution in the entire electorate. Thus, if the votes reported are 10% for party A, 30% for party B and 60% non-voters, while the parties really received 20% and 40%, respectively, Party A’s voters will be weighted by a factor of 2, and party B’s voters will be weighted by a factor of 1.33.

V132, on the other hand, does not account for non-voters, and calibrates based only on the valid-vote distributions. Thus, in the previous example, party A’s real support is 25% and party B’s support is 75%, and they will be weighted by factors of 0.8 and 0.53 respectively. Weighting by v132 assigns the weight of 0 to the non-voters.

#### *v301, v302: Closeness to Party ordinal scale*

Questions q87-q90, which pertain to Respondents’ feelings of ‘closeness’ to political parties, involve a set of routings. As a consequence, the variables reflecting these questions (q87-q90) contain NAP codes which reflect this routing. To facilitate the use of these variables, their information has been collapsed into two variables. The first expresses the strength of closeness to a party (ranging from not feeling close at all to any party, to feeling very close to a party), and amalgamates (without loss of information) the information contained in q87, q88 and q89. The second expresses the identity of the party that R is close to, and amalgamates (without loss of information) the information contained in q87 and q90.
