Filter Variable(s) and Conditions:
The FI_DEGR variable no longer contains a category for those still at school or studying. We had to assume that the respondents who had chosen one of the 'still at school/studying' answer alternatives had a certificate/education one step lower than they were currently studying. Their education level was coded accordingly.

Construction/Recoding:

<table>
<thead>
<tr>

**Optional**: Recoding Syntax
**ISCO88** - Occupation ISCO 1988

Please give the text of the source question(s) on the respondent’s occupation used in your field questionnaire. If ISCO88-codes are not coded directly from the responses, but derived from a country-specific occupation coding scheme, please provide a table of correspondence between country-specific and ISCO88 codes *attached as a separate file*. Please report which kind of ISCO code you apply. The most common ones are the code developed by the International Labour Organisation (ILO) and the variant developed for the European Union (EU), ISCO-COM. If you apply another variant such as ISCO88-CIS developed by the Statistical Committee of the Commonwealth of Independent States, then please specify.

Please **do not** enter **standard** ISCO88 codes here. But please report if your country **adds** or **changes** codes compared to ISCO88, if any.

Occupations should be coded on the **4-digit level** of ISCO88. Occupational area 0 (Armed Forces occupations) needs some special attention. Since the ISCO variable is numeric, the 4-digit code 0110 will usually appear as 110 in the data file. It is therefore suggested that the only valid 3-digit code in the data file is 110 (Armed Forces).

In some special cases information concerning the occupation may be insufficient for 4-digit coding. Instead of coding these cases as [9998] "inadequately described" use 3-digit coding. In those very special cases where 3-digit coding is applied, fill in a zero for the missing digit. Example: code 131 is coded as 1310.

SPISCO88 – Spouse, partner: occupation ISCO 1988

Please give the text of the source question(s) on the spouse's occupation used in your field questionnaire. If ISCO88-codes are not coded directly from the responses, but derived from a country-specific occupation coding scheme, please provide a table of correspondence between country-specific and ISCO88 codes attached as a separate file. Please report which kind of ISCO code you apply. The most common ones are the code developed by the International Labour Organisation (ILO) and the variant developed for the European Union (EU), ISCO-COM. If you apply another variant such as ISCO88-CIS developed by the Statistical Committee of the Commonwealth of Independent States, then please specify.

Please do not enter standard ISCO88 codes here. But please report if your country adds or changes codes compared to ISCO88, if any.

Occupations should be coded on the 4-digit level of ISCO88. Occupational area 0 (Armed Forces occupations) needs some special attention. Since the ISCO variable is numeric, the 4-digit code 0110 will usually appear as 110 in the data file. It is therefore suggested that the only valid 3-digit code in the data file is 110 (Armed Forces).

In some special cases information concerning the occupation may be insufficient for 4-digit coding. Instead of coding these cases as [9998] "inadequately described" use 3-digit coding. In those very special cases where 3-digit coding is applied, fill in a zero for the missing digit. Example: code 131 is coded as 1310.

</tr>
</tbody>
</table>

**Interviewer Instruction**

**Translation Note**: It is impossible to translate “belong to a religion” literally into Finnish for linguistic reasons. In Finland, this question is usually phrased using the expression “belong to a church or a religious community”, so this has been used in ISSP as well.

**Note**
Translation
Note: The Swedish phrasing of the question follows the Finnish one.

Please, remember to add to this documentation a report of about a page length, describing which concept(s) for ethnicity you are measuring and why this concept is/these concepts are of special interest in your country.

Mother tongue is considered to be the most distinguishing feature of different population groups in Finland. Finland has two official languages: Finnish (the dominant language) and Swedish. The variable measures mother tongue and has three categories: Finnish, Swedish and other languages. The proportion of non-Finnish-speakers is very small.

**WEIGHT – Weighting factor**

Please report on whether you calculate any weighting variables. If you adjust for non-response bias, please enter the variable(s) on which the sample's distribution(s) is (are) adjusted to the population distribution(s). Please, also report if you apply any kind of rescaling.

<table>
<thead>
<tr>
<th>Design weight to adjust for unequal selection probabilities</th>
<th>No</th>
<th>Yes</th>
</tr>
</thead>
<tbody>
<tr>
<td>Weight to adjust for non-response bias</td>
<td>No</td>
<td>Yes</td>
</tr>
<tr>
<td></td>
<td>[ ]</td>
<td>[x]</td>
</tr>
</tbody>
</table>

**Are the final weights rescaled to net sample size (thus weighted sample size=unweighted sample size)?**

<table>
<thead>
<tr>
<th>No</th>
<th>[x] → please specify target population represented by sum of all case weights</th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td>[x] SEE NOTE</td>
</tr>
</tbody>
</table>

**Note**

There are two weights available for calculations:

1) WEIGHT: Is a weight that expands the results to the population level (the sum of the weights is the size of the population aged 15 to 74) and

2) WEIGHT_2: Is a weight that doesn't have the expansion property (the mean of the weights is 1 and the sum of the weights is the number of accepted responses, i.e. the size of the data).

Both of the weights are based on the same calibration process, only the scale differs.

**Construction/Recoding:**

<table>
<thead>
<tr>

4. Country Questionnaire

Please provide the part(s) of your country questionnaire that relate(s) to the background variables reported in this template. If these variables are already covered by your country's field questionnaire delivered with your national ISSP data file, then just tick on the last page of this document. (PDF or MS Word format preferred.)

[x] Already included in field questionnaire provided with the country data file.
[  ] Attached file: XXXXX.XXX

5. Frequency Distributions of Source Variables

Please supply frequency distributions with absolute and relative frequencies, missing values included, for all source variables. Source variables are the country-specific variables before recodes into ISSP standard variables are done. (MS Word or simple ASCII file preferred.)

Attached file: ISSP 2011 Fl Frequency Distributions of Source Variables.doc.

6. Correspondence list ISCO88<->national occupation codes

If your country derives ISCO88 codes from a national occupation coding scheme, please supply a correspondence list of national codes and ISCO88 codes. (MS Word or simple ASCII file preferred.)

[x] ISCO88 is used to code responses directly.
[  ] Conversion of national coding scheme to ISCO88. Attached file: ZZZZZZ.ZZZ.
