Nombre de personnes âgées de 15 ans et plus dans le foyer

FLASH EUROBAROMETER 364

"Electoral rights"

TECHNICAL SPECIFICATIONS

Between the 5th and the 7th of November 2012, TNS Political & Social, a consortium created between TNS political & social, TNS UK and TNS opinion, carried out the survey FLASH EUROBAROMETER 364 about "Electoral rights".

This survey has been requested by the EUROPEAN COMMISSION, Directorate-General for Justice. It is a general public survey co-ordinated by the Directorate-General for Communication ("Research and Speechwriting" Unit). The FLASH EUROBAROMETER 364 covers the population of the respective nationalities of the European Union Member States, resident in each of the 27 Member States and aged 15 years and over. All interviews were carried using the TNS e-Call center (our centralized CATI system). In every country respondents were called both on fixed lines and mobile phones. The basic sample design applied in all states is multi-stage random (probability). In each household, the respondent was drawn at random following the "last birthday rule".

TNS has developed its own RDD sample generation capabilities based on using contact telephone numbers from responders to random probability or random location face to face surveys, such as Eurobarometer, as seed numbers. The approach works because the seed number identifies a working block of telephone numbers and reduces the volume of numbers generated that will be ineffective. The seed numbers are stratified by NUTS2 region and urbanisation to approximate a geographically representative sample. From each seed number the required sample of numbers are generated by randomly replacing the last two digits. The sample is then screened against business databases in order to exclude as many of these numbers as possible before going into field. This approach is consistent across all countries.

A comparison between the sample and the universe was carried out. The Universe description was derived from the national statistics office. The weighting procedure, using marginal and intercellular weighting, was carried out based on this Universe description. Gender, age, region, social class and the vote in the referendum on the Stability Treaty were introduced in the iteration procedure.

Readers are reminded that survey results are estimations, the accuracy of which, everything being equal, rests upon the sample size and upon the observed percentage. With samples of about 1,000 interviews, the real percentages vary within the following confidence limits:

| Statistical Margins due to the sampling process (at the 95% level of confidence) | | | | | | | | | | | |
|---|-----|-----|-----|------|------|--|------|------|------|------|---------|
| <i>various sample sizes are in rows</i> | | | | | | <i>various observed results are in columns</i> | | | | | |
