Firearms in the European Union

Basic bilingual questionnaire

TNS Political & Social

FL 383 Firearms - UK

D1	How old are you?
----	------------------

(WRITE DOWN - IF "REFUSAL" CODE '99')

--	--

D2	Gender.
----	---------

Male	1
Female	2

FL378 FIREARMS

ASK ALL

FL383 FIREARMS

ASK ALL

Q1 Would you describe the level of crime using firearms in [OUR COUNTRY] as....

(READ OUT – ONE ANSWER ONLY) (PLEASE CLARIFY: 'firearm' means any type of gun (excluding airguns) such as handguns, rifles, shotguns etc.)

Very high	1
Fairly high	2
Fairly low	3
Very low	4
DK/NA	5

NEW

Q2 Do you think that over the next five years the level of crime using firearms in [OUR COUNTRY] is likely to...?

(READ OUT – ONE ANSWER ONLY)

Increase	1
Decrease	2
Stay the same	3
DK/NA	4

NEW

Q3 In your opinion, is stricter regulation of who is allowed to own, buy or sell firearms in [OUR COUNTRY] the most effective way to reduce the level of crime using firearms or do you think this would be more effectively achieved in other ways?

(READ OUT – ONE ANSWER ONLY)

Stricter regulation	1
Some other way	2
None (DO NOT READ OUT)	3
DK/NA	4

FLASH EUROBAROMETER 383

“Firearms in the European Union”

TECHNICAL SPECIFICATIONS

Between the 16 and the 18 of September 2013, TNS Political & Social, a consortium created between TNS political & social, TNS UK and TNS opinion, carried out the survey FLASH EUROBAROMETER 383 about “Firearms in the European Union”.

This survey has been requested by the EUROPEAN COMMISSION, Directorate-General for Home Affairs. It is a general public survey co-ordinated by the Directorate-General for Communication (“Research and Speechwriting” Unit). The FLASH EUROBAROMETER 383 covers the population of the respective nationalities of the European Union Member States, resident in each of the 28 Member States and aged 15 years and over. All interviews were carried using the TNS e-Call center (our centralized CATI system). In every country respondents were called both on fixed lines and mobile phones. The basic sample design applied in all states is multi-stage random (probability). In each household, the respondent was drawn at random following the “last birthday rule”.

TNS has developed its own RDD sample generation capabilities based on using contact telephone numbers from responders to random probability or random location face to face surveys, such as Eurobarometer, as seed numbers. The approach works because the seed number identifies a working block of telephone numbers and reduces the volume of numbers generated that will be ineffective. The seed numbers are stratified by NUTS2 region and urbanisation to approximate a geographically representative sample. From each seed number the required sample of numbers are generated by randomly replacing the last two digits. The sample is then screened against business databases in order to exclude as many of these numbers as possible before going into field. This approach is consistent across all countries.

Readers are reminded that survey results are estimations, the accuracy of which, everything being equal, rests upon the sample size and upon the observed percentage. With samples of about 1,000 interviews, the real percentages vary within the following confidence limits:

**Statistical Margins due to the sampling process
